R&M GENERAL NOTES

1. R&M ENGINEERING SHALL NOT BE RESPONSIBLE FOR CONSTRUCTION MEANS, METHODS, TECHNIQUES, OR PROCEDURES UTILIZED BY THE CONTRACTOR, NOR FOR THE SAFETY OF PUBLIC OR CONTRACTOR'S EMPLOYEES; OR FOR THE FAILURE OF THE CONTRACTOR TO CARRY OUT THE WORK IN ACCORDANCE WITH THE CONTRACT DOCUMENTS.
2. ALL EXISTING STRUCTURES SPECIFIED TO BE REMOVED, SHALL BE REMOVED AND BACKFILLED. BACKFILL TO BE SELECT GRANULAR FILL, COMPACTED TO 95% MAXIMUM DENSITY AT OPTIMUM MOISTURE CONTENT, AS DETERMINED BY MODIFIED PROCTOR TEST.
3. ALL FILL SHALL BE SELECT GRANULAR MATERIAL COMPACTED TO 95% OF THE MAXIMUM DENSITY AT THE OPTIMUM MOISTURE CONTENT, AS DETERMINED BY THE MODIFIED PROCTOR TEST.
4. LOCATION OF EXISTING UTILITIES SHALL BE VERIFIED BY CONTRACTOR PRIOR TO EXCAVATION.
5. ALL SITE WORK SHALL BE IN ACCORDANCE WITH THE REQUIREMENTS OF THE TOWN, COUNTY, STATE OR AS SPECIFIED HEREIN, LATEST EDITIONS.
6. CONTRACTOR SHALL BE RESPONSIBLE FOR OBTAINING ALL PERMITS NECESSARY FOR THE INSTALLATION OF THE SEWAGE TREATMENT PLANT. CONTRACTOR SHALL BE RESPONSIBLE FOR MEETING ALL REQUIREMENTS FOR THE PRECONSTRUCTION OF THE SEWAGE TREATMENT PLANT FROM ALL AGENCIES. CONTRACTOR SHALL COORDINATE THE REQUIRED INSPECTIONS DIRECTLY WITH ALL REGULATORY AGENCIES AS REQUIRED.
7. CONTRACTOR SHALL BE RESPONSIBLE FOR OBTAINING ANY AND ALL PERMITS NECESSARY TO REMOVE ANY EXCAVATED MATERIALS.
8. UNSUITABLE MATERIAL, AS DEFINED IN SECTION 203 OF THE N.Y.S.D.O.T. STANDARD SPECIFICATIONS SHALL BE REMOVED AND REPLACED WITH SELECT GRANULAR MATERIAL.
9. SELECT GRANULAR MATERIAL SHALL BE AS DEFINED IN SECTION 203 OF THE N.Y.S.D.O.T. STANDARD SPECIFICATIONS.
10. COMPACTION SHALL CONFORM TO N.Y.S.D.O.T. SECTION 203.
11. DEBRIS SHALL NOT BE BURIED ON THE SUBJECT SITE. ALL UNSUITABLE MATERIAL AND DEBRIS SHALL BE DISPOSED OF IN ACCORDANCE WITH ALL TOWN, COUNTY, STATE AND FEDERAL LAWS AND APPLICABLE CODES.
12. ALL STRUCTURES SHALL BE REINFORCED PRECAST CONCRETE, UNLESS OTHERWISE NOTED, WITH PRECAST OPENINGS FOR ALL PIPES. THE STRUCTURES SHALL CONFORM TO THE COUNTY STANDARD DETAILS AND SPECIFICATIONS.
13. CONSTRUCTION OF THE SEWAGE TREATMENT PLANT SHALL CONFORM TO WESTCHESTER DEPARTMENT OF PUBLIC WORKS (WCDPW) AND WESTCHESTER COUNTY DEPARTMENT OF HEALTH (WCDH) STANDARDS AND SPECIFICATIONS.
14. THE CONTRACTOR SHALL FURNISH AND INSTALL TEMPORARY SHEETING, SHORING AND BRACING OF EXCAVATIONS AS REQUIRED TO COMPLETE THE CONTRACT WORK.
15. CONTRACTOR SHALL SUBMIT SHOP DRAWINGS FOR ALL RELATED ITEMS PERTAINING TO THE SEWAGE TREATMENT PLANT FOR REVIEW AND APPROVAL. THE SHOP DRAWINGS WILL BE REVIEWED AND APPROVED BY R&M ENGINEERING AND WCDH PRIOR TO ORDERING MATERIALS.
16. ALL INVERTS, LOCATIONS AND ELEVATIONS CERTIFIED BY DESIGN ENGINEER.
17. A CLEANOUT SHALL BE INSTALLED AT THE FACE OF ALL BUILDINGS.

PROJECT NOTES

1. THE CONTRACTORS SHALL VERIFY ALL FIELD CONDITIONS AND DIMENSIONS PRIOR TO PROVIDING BID PROPOSAL. THE CONTRACTORS WILL BE RESPONSIBLE FOR FIELD FIT AND QUALITY OF WORK SATISFACTORY TO THE REGULATORY AGENCY AND THE ENGINEER. NO ALLOWANCE WILL BE MADE ON BEHALF OF ANY ERROR OR NEGLECT ON THE PART OF THE CONTRACTORS.
2. CONTRACTORS SHALL VISIT THE SITE, REVIEW ALL CONSTRUCTION DOCUMENTS PRIOR TO SUBMITTING THE BID. CONTRACTORS SHALL INFORM THE ENGINEER OF ANY OMISSIONS AND/OR DEFICIENCIES.
3. CONTRACTORS SHALL BE RESPONSIBLE FOR ANY AND ALL MARK OUTS FOR ALL UNDERGROUND UTILITIES AND SERVICES IN THE AREA AND RELOCATE THEM AS REQUIRED THROUGHOUT THE PROJECT PER RELEVANT CODE. THE ENGINEER SHALL BE NOTIFIED OF ANY CONFLICTS BETWEEN EXISTING UTILITIES AND THE PROPOSED WORK, PRIOR TO THE START OF CONSTRUCTION. ALL OTHER WORK PERFORMED SHALL BE AS SPECIFIED HEREIN AND IN ACCORDANCE WITH THE TOWN OF NORTH CASTLE, WESTCHESTER COUNTY STANDARDS.
4. INSTALLATION OF THE ELECTRIC SERVICE IS THE RESPONSIBILITY OF THE CONTRACTORS, ALL WORK SHALL CONFORM, AT A MINIMUM TO THE REQUIREMENTS OF PUBLIC SERVICE ELECTRIC AND GAS AND REGULATORY AGENCIES HAVING JURISDICTION.
5. INSTALLATION OF THE GAS SERVICE IS THE RESPONSIBILITY OF THE CONTRACTORS, ALL WORK SHALL CONFORM, AT A MINIMUM, TO THE REQUIREMENTS OF CON EDISON AND REGULATORY AGENCIES HAVING JURISDICTION.
6. INSTALLATION OF THE TELEPHONE SERVICE IS THE RESPONSIBILITY OF THE CONTRACTORS, ALL WORK SHALL CONFORM, AT A MINIMUM, TO THE REQUIREMENTS OF VERIZON AND REGULATORY AGENCIES HAVING JURISDICTION.
7. THE CONTRACTORS SHALL BE RESPONSIBLE FOR OBTAINING ALL PERMITS NECESSARY FOR THE INSTALLATION OF ALL UTILITIES, THE CONTRACTORS SHALL BE RESPONSIBLE FOR MEETING ALL REQUIREMENTS FOR PRE-CONSTRCUTION OF ANY SANITARY SYSTEM FROM ALL GOVERNING AGENCIES. ALL WORK SHALL CONFORM TO THE REQUIREMENTS OF ALL THE UTILITIES OR MUNICIPAL AGENCIES HAVING JURISDICTION. THE CONTRACTORS SHALL COORDINATE THE REQUIRED UTILITY AND MUNICIPAL INSPECTORS.
8. CONTRACTORS WILL BE RESPONSIBLE FOR COMPLIANCE WITH FEDERAL, STATE, COUNTY AND LOCAL SAFETY CODES.
9. CONTRACTORS WILL BE RESPONSIBLE FOR RESTORATION OF ANY AND ALL DAMAGE TO ANY STRUCTURES, GRADE, ASPHALT, PAVEMENT, ETC. AS REQUIRED BY AGENCIES HAVING JURISDICTION, AT NO ADDITIONAL COST TO THE OWNER.
10. CONTRACTORS SHALL BE RESPONSIBLE FOR THE TRAFFIC MAINTENANCE THROUGHOUT THE PROJECT.
11. CONTRACTORS SHALL EMPLOY ALL SAFETY MEASURES INCLUDING SHEETING AND SHORING TO PROTECT THE STRUCTURES AND PERSONS.
12. CONTRACTORS SHOULD COORDINATE THE WORK WITH ALL AUTHORITIES HAVING JURISDICTION.
13. CONTRACTORS SHALL NOT BACKFILL ANY WORK PRIOR TO THE INSPECTIONS BY THE ENGINEER AND WCDH. BACKFILLING SHOULD BE ACCORDING TO WCDH STANDARDS AND WITH THE SATISFACTION OF THE ENGINEER AND WCDPW.
14. ALL MATERIAL, WORKMANSHIP, INSTALLATIONS PROCEDURES AND MAINTENANCE OF TRAFFIC SHALL BE PERFORMED BY THE CONTRACTORS IN ACCORDANCE WITH WCDH STANDARDS.
15. THE CONTRACTOR IS REMINDED THAT ALL CONSTRUCTION PRACTICES MUST FOLLOW OSHA REQUIREMENTS AND ANY OTHER APPLICABLE LAWS. CONSEQUENTLY, ALL BELOW GRADE, ABOVE GRADE, CONFINED SPACE AND SIMILAR ASPECTS OF THE WORK SHOULD BE CARRIED OUT IN COMPLIANCE WITH ALL APPLICABLE REGULATIONS.
16. ALL EXISTING STRUCTURES WHICH ARE TO BE REMOVED SHALL BE BACKFILLED WITH SELECT GRANULAR FILL WHICH HAS BEEN COMPACTED TO A 95% MAXIMUM DENSITY AT THE OPTIMUM MOISTURE CONTENT AS DETERMINED BY A MODIFIED PROCTOR TEST.
17. DEBRIS SHALL NOT BE BURIED ON THE SUBJECT SITE. ALL UNSUITABLE MATERIAL AND DEBRIS SHALL BE DISPOSED OF IN ACCORDANCE WITH ALL LOCAL TOWN, COUNTY, STATE AND FEDERAL LAW AND APPLICABLE CODES.
18. THE OWNER SHALL ENGAGE AND PAY FOR A NEW YORK STATE LICENSED SURVEYOR (NYSLS) TO STAKE OUT AND SURVEY THE SEWAGE TREATMENT PLANT AND DISPOSAL SYSTEM FOR INSTALLATION AND PREPARATION OF AS-BUILT DRAWINGS.
19. THE CONTRACTORS SHALL SCHEDULE CONSTRUCTION ACTIVITIES WITH THE OWNER'S NYSLS FOR THE INSTALLATION OF THE SEWAGE TREATMENT PLANT DISPOSAL SYSTEM, INCLUDING THE STP BUILDING, EFFLUENT OUTFALL PIPING AND STRUCTURES, FORCE MAINS, CLEAN OUTS, AIR RELIEF VALVES, DRAIN VALVES, MANHOLES, ETC.
20. THE NYSLS SHALL SUBMIT THREE (3) SIGNED AND SEALED COPIES OF THE AS BUILT PLANS TO THE ENGINEER, AS WELL AS A DIGITAL COPY OF THE DRAWINGS IN AUTOCAD FORMAT. AS-BUILT PLANS SHALL INDICATE THE FOLLOWING:
    - 20.1. LOCATIONS AND PIPE INVERT ELEVATIONS OF EFFLUENT PIPING & STRUCTURES.
    - 20.2. GRADES AND PIPING FEATURES INCLUDING DIAMETER, DEPTH, INCOMING SEWER INVERT, FORCE MAIN INVERT, ETC.
    - 20.3. ALIGNMENT, INVERT ELEVATIONS, DIAMETERS, CLASS AND TYPE OF PIPE, LENGTHS OF FORCE MAIN, LOCATIONS OF VALVES, CLEANOUTS, SIZES.
    - 20.4. LOCATIONS OF ALL UTILITIES, DRAINAGE STRUCTURES AND PIPING, AND CROSSINGS WITH OTHER UTILITIES, DRAINAGE, ETC.
    - 20.5. STP STRUCTURES AND ELEVATION, PIPE INVERTS AND LOCATIONS, TOP OF TANK SLAB LOCATION AND CORNER ELEVATIONS, ETC.
21. SIZES AND SCALES OF AS-BUILT PLANS AND PROFILES TO BE SAME AS APPROVED ENGINEERING DRAWINGS.
22. NYSLS SHALL MAKE CORRECTIONS/AMENDMENTS TO THE AS-BUILT DRAWINGS AS REQUIRED TO MEET THE APPROVAL OF THE REGULATORY AGENCIES.
23. CONTRACTOR SHALL CORRECT DEFICIENT WORK.
24. UPON RECEIPT OF REGULATORY AGENCY APPROVAL OF THE AS-BUILT PLANS, THE NYSLS SHALL COMPLY WITH THE CURRENT REQUIREMENTS OF THE REGULATORY AGENCIES WITH RESPECT TO THE FINAL DOCUMENTATION OF AS-BUILTS.

FOREWORD

This Engineering report has been prepared in compliance with the requirements of the *New York State Design Standards for Intermediate Sized Wastewater Treatment Systems* (issued by New York State Department of Environmental Conservative (NYSDEC)), requirements of Chapter 873, Article VIII of the Westchester County Sanitary Code and in general follows the guidelines of the *Recommended Standards For Wastewater Facilities* (Ten State Standards).

This Engineering Report has been prepared to address the complete replacement of the existing Sewage Treatment Plant (STP) to serve the proposed redevelopment of the property to update the existing golf course with a new clubhouse, amenities complex, and residential community comprised of 72 townhomes. The parcel for The Summit Club at Armonk project is located east of Interstate 684 and approximately 720 feet north of Blair Road in Armonk, Town of North Castle, New York.

SECTION I

GENERAL INFORMATION

Project Name: The Summit Club at Armonk STP Replacement

Applicant: Summit Club Partners, LLC
c/o Mr. Jeffrey Mendell
568 Bedford Road
Armonk, New York 10504

Project Description: The applicant proposes to redevelop the existing golf course to also include 72 townhouse units, clubhouse, and a new amenities complex including a pool, spas, restaurant, and bar and lounge. The existing sewage treatment plant (STP) will be replaced, with the STP relocated and capacity upsized to meet the treatment and disposal needs of the golf course and proposed community as well as additional future expansion of the residential space.

Project Location: The total site area where The Summit Club at Armonk development is proposed is 156.29 acres at 568 & 570 Bedford Road in Armonk, NY. The parcel for the Summit Club redevelopment is located east of Interstate 684 and approximately 720 feet north of Blair Road in Armonk, Town of North Castle, New York.

Consulting Engineer: Robinson & Muller Engineers, P.C.

SECTION II

INTRODUCTION

General

This Engineering Report has been prepared for The Summit Club at Armonk project, the development of a housing community of 72 townhomes and golf and country club. There are also future plans for expansion of the residential complex with additional townhomes and private guest cottages. A projected flow of 45,000 gpd shall be used as the basis of design when accounting for contributions to the existing STP from the proposed and potential future development. The project site is the Summit Club golf course in Armonk, Town of North Castle, New York.

The total project site area for the Summit Club development is 156.29 acres. The existing STP is situated on the site between the ninth hole green and fairway bunker within the existing framed building. This building will be used in the redevelopment as an equipment storage building. As such, a replacement STP is proposed within the hillside between the existing driveway to the existing STP building and the south side of the existing driving range.

Project Site

The overall existing site where the STP will be located varies in elevation from approximately 640 feet above mean sea level (AMSL) in the northeast portion of the property to 400 feet AMSL in the western portions of the property. The STP will be in the southeast portion of the property where the ground surface is proposed to be approximately 534-574 feet AMSL. Based on the subsurface soil and foundation investigation report by Carlin-Simpson & Associates in Appendix A, groundwater was only encountered in one of ten borings taken and four of eleven test pits excavated, reflecting variation in the location of long-term water table at the project site. Based on the information available from the investigation, it is assumed that the flow direction in the project site area is generally to the west.

The subject parcel for the STP and residential complex is a part of lot 101.02-1-28.2 (568 Bedford Road) and the golf course is on parcel 101.02-1-28.1 (570 Bedford Road). There are fourteen (14) currently private wells onsite, which are at least 50 feet away from the STP outfall line. The STP shall be serviced by a dedicated 1” water service tapped into the proposed potable water distribution line from the proposed potable water treatment building to be located adjacent to the existing STP building.

SECTION III

PROPOSED TREATMENT PLANT CAPACITY

SANITARY SEWAGE FLOW

The average daily design flow for sewage is the average of the daily volumes of sewage to be received at the STP for a continuous twelve (12) month period. For the community and golf club, the flow is determined by the criteria from Table B3 – Typical Per-Unit Hydraulic Loading Rates from the Department of Environmental Conservation (NYS DEC) "Design Standards for Wastewater Treatment Works, Intermediate Sized Sewage Facilities" (2014 Edition) as follows:

1.	Townhomes	162 Bedrooms	@ 110 gpd/Bedroom	=	17,820 gpd
2.	Bar & Grill	35 Seats	@ 16 gpd/Seat*	=	560 gpd
3.	Restaurant	252 Seats	@ 28 gpd/Seat*	=	7,056 gpd
4.	Golf Tournament	144 Golfers	@ 16 gpd/Golfer*	=	2,304 gpd
5.	Country Club	20 Employees	@ 12 gpd/Employee*	=	240 gpd
6.	Golf Course (GC)	15 Employees	@ 12 gpd/Employee*	=	180 gpd
7.	Seasonal GC Staff	12 Bedrooms	@ 60 gpd/Bedroom*	=	720 gpd
8.	Pool	257 Swimmers	@ 8 gpd/Swimmer*	=	2,053 gpd
9.	Spas	24 Swimmers	@ 8 gpd/Swimmer*	=	192 gpd
10.	Excess Pool Deck	170 Swimmers	@ 8 gpd/Swimmer*	=	1,363 gpd
11.	STP Equipment Washdown/Lab	___	55 gpd	=	55 gpd
			Proposed Total Flow	=	**32,543 gpd**
			Future Total Flow (Including Add'tl Guest Cottages + Townhomes)	=	**8,360 gpd**
			Total Average Daily Design Flow	=	**40,903 gpd**
			SAY	=	**45,000 gpd**

*These identified per-unit hydraulic loading rates in the above table have been reduced by 20% because they follow the guidelines set in the NYS DEC design standards for establishments with water-saving plumbing fixtures.

In the table above, items 1-9 result in a proposed flow of 32,543 gpd and the breakdown also includes planned future flows with a maximum contribution of 12,457 gpd. Therefore, a maximum average daily design flow of 45,000 gpd will be used to size the STP for the purposes of this report.

The State Pollutant Discharge Elimination System (SPDES) Permit No. 0069299 for the existing STP established an effluent limitation for flow of 0.016 MGD (16,000 gpd), while the actual flows are minimal and taken care of with temporary facilities while the golf course is closed for renovations. Since this report will evaluate and involve the complete replacement of the existing STP, the flow through the STP is proposed to increase to 45,000 gpd. With the existing discharge permit being expired and the increase in flow, a new SPDES Permit will be obtained from the NYS DEC as required.

In accordance with “Figure 1” of the Ten State Standards, the peak hourly flow for a population of approximately 600 (45,000 gpd ÷ 75 gpd per person) is 3.93 times the average daily flow rate. Peak hourly flow is therefore calculated to be 45,000 gpd x 3.93 = 176,850 gpd (122.81 gpm, say 123 gpm).

SECTION IV

INFLUENT SEWAGE CHARACTERISTICS

The standard influent untreated sewage design characteristics provided in the New York State Department of Environmental Conservation (NYS DEC) "Design Standards for Wastewater Treatment Works, Intermediate Sized Sewage Facilities" (2014 Edition) are as follows:

BOD_5:	155-286 mg/L
TSS:	155-330 mg/L
TP:	6-12 mg/L
Ammonia:	4-13 mg/L
FOG:	70-105 mg/L

Based on the above influent sewage characteristics and influent flow of 45,000 gallons per day, the influent loads that the expanded STP shall be capable of treating have been calculated as follows:

lbs. of pollutants = mg / L pollutant x 8.34 lb. / gal. x flow (Q) in gals. / day x 10^{-6}

BOD_5:	240 mg/L x 8.34 lb. /gal. x 45,000 gpd x 10^{-6}	=	90.07	lb. BOD_5 / day
TSS:	240 mg/L x 8.34 lb. /gal. x 45,000 gpd x 10^{-6}	=	90.07	lb. SS / day
TKN:	40 mg/L x 8.34 lb. /gal. x 45,000 gpd x 10^{-6}	=	15.01	lb. TKN/day
TP:	8 mg/L x 8.34 lb. /gal. x 45,000 gpd x 10^{-6}	=	3.00	lb. TP/day

SECTION V

EFFLUENT REQUIREMENTS

The treated effluent from the proposed Summit Club community and golf club will discharge to surface water, an onsite tributary to Byram River classified by NYS DEC as a Class B(T) stream. Class B(T) streams typically support public swimming, recreation, and fishing, more specifically trout populations. Due to inconsistencies in flow and effluent dilution ratio. The receiving tributary is classified as an "intermittent stream," which has typical effluent limits as specified in Table B-4B of the NYS DEC standards.

Consequently, we expect that the State Pollutant Discharge Elimination System (SPDES) permit to align with these limits. The 30-day arithmetic average flow limit listed on the permit will be the design flow of 45,000 GPD, and the preliminary effluent limits for the parcel provided by the NYS DEC Division of Water Quality specific to the project are outlined below:

$BOD_{5:}$	5.0 mg/L Daily Max.
TSS:	10.0 mg/L Daily Max.
Settleable Solids:	0.1 mg/L Daily Max.
Ammonia (Summer):	0.9 mg/L Daily Max.
Ammonia (Winter):	1.8 mg/L Daily Max.
Phosphorus:	1.0 mg/L Monthly Average
Fecal Coliform:	400 No./100 mL (7-day geometric mean)
Fecal Coliform:	200 No./100 mL (30-day geometric mean)

The daily maximum limit for the Summer is applicable between June 1st through October 31st each calendar year, while the limit for Winter applies November 1st through May 31st. Based on the selected Purestream Biologically Engineered Single Sludge Treatment (BESST) process for the STP replacement, the following effluent quality is anticipated:

$BOD_{5:}$	< 5.0 mg/L
TSS:	< 10.0 mg/L
Ammonia:	< 0.9 mg/L
Phosphorus:	< 1.0 mg/L
Fecal Coliform:	< 200 No./100 mL (30-day geometric mean)

The effluent quality is expected to meet or exceed the effluent requirements.

SECTION VI

TREATMENT OPTIONS

Based on density restrictions, formal sewage treatment must be provided for the proposed project. Generally, two options are available:

- Off-Site Treatment and
- On-Site Treatment.

Off-Site Treatment

Off-site treatment requires that there be an existing STP which:

- is sufficiently close to the project site to allow for economical transfer of sanitary sewage flow from the project site to the host STP site;
- has sufficient uncommitted excess capacity for the expected proposed and future sanitary sewage flow (if any); and
- is capable of treating the sewage to the required effluent quality.

After reviewing the site and the surrounding area, no STP sites were found that could potentially serve as an optimal alternative to replacing the existing STP and have the capacity to receive sewage from the Summit Club golf course and residential complex, and therefore we have concluded that it is not feasible to use an off-site treatment option.

On-Site Treatment

Some onsite treatment plants use extended aeration process or Rotating Biological Contactors (RBCs) followed by a deep bed denitrification filter(s). Other STPs use Sequencing Batch Reactors (SBR), Membrane Bio-Reactors (MBR), and the Biologically Engineered Single Sludge Treatment (BESST) process.

The BESST process was selected for the project based upon its record of process stability and ability to consistently achieve the NYS DEC & Westchester County sanitary sewage design goals for treatment of sanitary sewage.

Sanitary sewage will be transported to the STP from the residences and amenities complex via an 8” PVC gravity collection and conveyance system designed by JMC Planning Engineering, Landscape Architecture & Land Surveying, PLLC (JMC).

Description of Selected BESST Treatment Process:

The BESST process is a continuous flow modified extended aeration process. Sewage enters first into the anoxic chamber where it mixes with Return Activated Sludge (RAS) from the clarifier. The nitrogen removal process is completed here as nitrite (NO_2-N) and nitrate (NO_3-N) produced in the aeration zone are converted to nitrogen gas (N_2). Some of the influent BOD_5 is consumed in this denitrification process. The dissolved oxygen (DO) level is maintained below 0.2 mg/l, and submerged mixers keep mixed liquor suspended solids (MLSS) in suspension.

The mixed liquor is transferred by gravity from the anoxic chamber to the far end of the aeration chamber through a submerged transfer pipe. BOD_5 removal and nitrification take place here as the mixed liquor is aerated by fine bubble air diffusers. The aerated mixed liquor then flows into the bottom of the clarifier by means of a baffle.

In the clarifier, solids settle to the bottom as the supernatant flows over the effluent weir and is gravity discharged to the effluent recharge system. Waste Activated Sludge (WAS) sludge is returned to the sludge holding tank.

SECTION VII
TREATMENT FACILITY DESIGN

Drawing No. 1 – STP Site Plan shows the proposed location of the STP and effluent piping connecting into the existing outfall line that discharges to surface water. Drawing No. 2 - Hydraulic Profile illustrates the proposed hydraulic flow profile of sewage and sludge flows through the STP through the existing sewer manhole that will be used as the connection point into the outfall line.

The proposed sewage treatment and disposal facilities will consist of an equalization tank, a 45,000 gpd BESST process train including a sludge holding tank, an influent screening device and constant head box on a precast concrete access slab, a proposed flow metering effluent manhole, approximately 300 feet of 6" PVC piping to reach the existing outfall piping, and a proposed 20.5-ft by 35-ft masonry STP building containing a tertiary filter and two (2) UV treatment units. Each step of the process and the required support systems are described below.

All side walls, end walls, bottom, and partitions of the BESST process and equalization tanks shall be of structural grade ASTM-A36 steel plate and all internal piping will be constructed of type 316 stainless steel. There shall be full grating over each of the BESST tanks, including the tertiary filter within the building, and a set of stairs for Operator access to the tertiary filter that extends above the first floor elevation of the STP building. The perimeter of the process tank and filter will be equipped with galvanized steel safety handrails and kickplate at top of tank elevation.

Influent Equalization Tank

The 8" diameter PVC gravity sewer line has a proposed invert into the equalization tank set at 4.0 feet below the top of tank elevation. The existing flow equalization tank will be equipped with two (2) Goulds Model 3887 WS05BHF non-clog submersible pumps to convey sanitary sewage out of the tank to the anoxic tank internal to the BESST process train. Each pump will have the capacity to handle at a minimum the peak influent flow of 45 gpm at 14.51 ft. TDH. Pump performance curves can be found in Appendix B.

The equalization volume in the tank will be provided between the lead pump "off" elevation to the lag pump "on" elevation, consisting of a proportion of the daily average flow, sludge holding tank volume, and tertiary filter volume.

Equalization Volume Required	=	20% of Daily Average Flow + 25% Sludge Holding Tank Volume + 5% Daily Flow Filter Volume
	=	45,000 x 0.20 + 13,757 x 0.25 + 45,000 x 0.05
Total Required Equalization Volume	=	14,689.25 gallons (1,963.80 cu. ft.)

The minimum vertical difference between "Lag Pump On" float level elevation and the "Lead Off" float level elevation shall be 5.0 ft. A total equalization storage volume of 15,051 gallons will be provided, which is well above the minimum calculated above.

The applicable criteria of Chapter 60 "Screening, Grit Removal and Flow Equalization" of the Ten State Standards including general criteria and the special considerations and standards for flow equalization structures. The 34'-0" x 12'-0" x 7'-0" SWD equalization tank has full grating over the tank with removable panels for operator access. Operation of the pumps will be controlled by use of a pressure transducer, and all pressure transducer and tank elevations are shown below:

Float	**Height**
Top of Equalization Tank	585.25
Approximate Grade El.	585.00
Influent Line El.	581.00
High Water Level Alarm	580.75
Lag Pump On	580.25
Lag Pump Off	578.25
Lead Pump On	577.25
Lead Pump Off	575.25
Low Water Level Alarm	574.75
Bottom of Equalization Tank	573.75

Table – Equalization Pump Float Levels

Influent Screening Device

The two (2) explosion proof submersible raw sewage pumps specified in the previous section will pump the sewage from the equalization tank to a covered fine bar screen via two (2) 3" diameter force mains. The bar screen shall be mounted on the precast concrete access slab that is located between the proposed equalization and BESST process tank. See Drawing No. 1 – STP Site Plan for proposed location of the access slab. The screen

will have the capacity to process the flow from both equalization pumps in the event that they run simultaneously. The screened solids will be disposed of manually. The selected screening device is a model MB 260T by Or-Tec, Inc. with a 2 mm screen opening. The screened influent will pass through a constant head box prior to being conveyed to the anoxic tank via gravity.

Anoxic Compartment

See Appendix C – Manufacturer's Process Calculations for Anoxic Compartment calculations.

The equalized sewage will enter the anoxic compartment where it will mix with the return activated sludge (RAS) which is returned from the bottom of the clarifier by means of air lift pumps. This anoxic compartment will act as a selector conditioning zone for the microorganisms which will consume the pollutants in the sewage. Some of the influent BOD_5 will be consumed by the denitrifying bacteria as they complete the nitrogen removal process (Denitrification) and convert nitrate (NO_3) to nitrogen gas (N_2). Two (2) electric submersible mixers on slide rail assemblies with manual hoists will be provided within the anoxic compartment to prevent settling. The mixed liquor will flow into the far end of the bottom of the aeration compartment through a submerged transfer pipe.

The BESST anoxic zone will be 14'-0" wide by 4'-0" long (plan view at the water level), and have a 10'-6" effective depth (12'-0" total sidewall depth). The total volume of the anoxic zone shared between the two trains shall be 993.85 cu.ft. (7,434.0 gallons) . With a design flow of 45,000 GPD, the detention time will be 3.96 hours.

Aeration Compartment

See Appendix C – Manufacturer's Process Calculations for Aeration Compartment calculations.

The mixed liquor will be aerated by a fine bubble air diffusion system to provide process oxygen and prevent solids settlement. The remaining BOD_5 will be removed and the nitrification process which begins as ammonia (NH_3) is converted to nitrite (NO_2) and nitrate (NO_3). The mixed liquor will then flow into the bottom of each clarifier by means of a baffle design integral to the clarifier. Return sludge will be removed from the bottom of each clarifier and pumped to the anoxic zone by means of air lift pumps. Oxygen levels in each aeration compartment will be controlled by utilizing a portable hand-held D.O. monitoring probe and adjusting the manual VFD's on each blower.

The air requirement for the aeration tanks is determined by the manufacturer based on the oxygen and air consumption rates, including a safety factor of 5 scfm. The calculation is outlined below:

Air Flow Rate Required:

$$Oxygen = \ Q((S_O - S_R)/0.68) - 1.42P_X + \ 4.57Q(N_O - N)$$

$$Oxygen = \ 170.33((0.24 - 0.0037)/0.68) - 1.42(14.004) + \ 4.57(170.33)(0.04 - 0.001)$$

$$Oxygen = \ 69.655 \ kg \ O_2/day$$

$$Air = O_2(\frac{c_S}{c_S - 2})(\frac{o_K}{0.024a})$$

$$Air = 69.655(\frac{8.1224}{8.1224 - 2}))(\frac{1.30}{0.024 * 30})$$

$$Air = 166.85 \ Nm^3/h$$

$$Air = \left(166.85 \frac{Nm^3}{h} * 35.31 \frac{m^3}{ft^3} * \frac{1 \ min}{60 \ hr}\right) = 98.19 \ cfm + 5 \ cfm =$$

$$Air = 103.19 \ cfm$$

Therefore, for each aeration tank the required amount of air is 51.60 cfm, and the air provided for the aeration tanks will come from the main process blower. See Appendix C for a breakdown of the manufacturer's BESST calculations as well as a list of inputs for the above calculations.

Each proposed aeration compartment will be 14'-0" wide by 9'-2 ½" long (plan view at the water level), and have a 10'-6" effective depth (12'-0" total sidewall depth). The aeration volume in each treatment train will be 1,757.69 cu.ft. (13,147.5 gallons), for a total volume of 3,515.37 cu.ft. (26,295 gallons). With the design flow of 45,000 GPD, the detention time will be 14.02 hours. The combined detention time for the anoxic zones and the aeration zones will be 17.98 hrs.

Clarifier

See Appendix C – Manufacturer's Process Calculations for Clarifier calculations.

The clarifier has a triangular cross-section. Mixed liquor will enter the clarifier through the baffle at the bottom of the clarifier and flow upward. As the mixed liquor rises, heavier solids settle out, and in effect, form a blanket which filters out colloids and very fine particles. A distinct interface forms between the supernatant and the sludge blanket. An air lift pump will be used to remove the activated sludge from the bottom of the clarifier and either discharge it to the anoxic chamber or waste it to the sludge storage tanks. Nitrified return activated sludge (RAS) will be recycled to the anoxic chamber to maintain the biomass concentration required for the treatment process. The RAS rate is proposed to be 4 times the design flow rate for the STP (45,000 GPD x 4 / 1440 min/day / 2 process trains = 62.50 gpm per process train).

Since there are two (2) sludge airlifts rated at 13 scfm each and two (2) skimmer airlifts rated at 5 scfm, the required amount of air for the airlift lines is 36 scfm. The airlift calculations from the manufacturer and performance curves are shown in Appendix C.

Periodically, waste activated sludge (WAS) will be pumped to the sludge storage tanks to control the solids retention time (SRT) of the biomass. FOG and skimmings will be transferred through the airlift system back to the sludge holding tanks. The design SRT is 29.2 days. An air lift skimmer will be used to remove floatables such as light plastics, fats and oils from the surface of the clarifier. Clarifier supernatant flows over a weir into a trough and flows by gravity to the tertiary filter.

Each clarifier will measure 14'-0" wide by 11'-0" long (plan view at the water level), and have a 10'-6" effective depth (12'-0" total sidewall depth). Each clarifier has a volume of 811.76 cu.ft. (6,072 gallons), for a total of 1,623.53 cu.ft. (12,144 gallons). Detention time in the clarifiers at average flow of 45,000 gpd will be 6.48 hrs. The combined detention time for the anoxic zones, the aeration zones, and the clarifiers will be 24.46 hrs. Surface loading rate will be 146.10 GPD/sq.ft. (45,000 gpd/(2 units X 154 sq.ft. per unit) and weir loading rate will be 1,607.14 GPD/Ft. (45,000 GPD/(2 Units X 14'-0" L)). These values are within the limitations set forth by the Ten States Standards.

Blowers

1. Process Air / Airlift Blowers
   A total of two (2) blowers, each with a minimum capacity of 148 scfm, will be provided for the aeration tanks and sludge airlifts, which is greater than the required capacity of 138.19 cfm (103.19 cfm + 36.0 cfm = 138.19 cfm) for both tanks, See Appendix C – Manufacturer's Process Calculations for the aeration and airlift calculations. One (1) blower will act as the duty blower, and the standby blower will as function as a common spare for the aeration/airlift, the equalization tank, sludge holding tank, and tertiary filter. The blower selected for this duty is the Kaeser Model BB69C with a 10.0 HP motor. See Appendix D for blower performance data. Each blower will be supplied with a manual VFD control system with an electrical bypass. High and low pressure switches will be provided with manual valves to accommodate usage of the standby blower.

2. Equalization Tank / Sludge Holding Tank Air Blowers
   Two (2) blowers, each with a minimum capacity of 74 scfm, will be dedicated for the equalization and sludge holding tanks. This minimum capacity is greater than the required capacities of the equalization tanks and sludge holding tank of 18.81 cfm and 55.22 cfm, respectively. The blower selected is the Kaeser Model BB52C, with a 5.0 HP motor, see Appendix D for blower performance data. Each blower will be supplied with a manual VFD control system with an electrical bypass. High and low pressure switches will be provided with manual valves to accommodate usage of the standby blower.

3. Tertiary Filter Air Blower
   One (1) duty blower, with a minimum capacity of 160 scfm, will be provided for the tertiary filter, which is greater than the required capacity of 126.40 cfm, based on an air supply rate of 4 cfm/sq. ft. of filter beds. The total square footprint of the proposed filter beds is 31.5 square feet. The blower selected is the Kaeser Model BB69C, with a 10.0 HP motor, See Appendix D for blower performance data. High and low pressure switches will be provided with manual valves to accommodate usage of the standby blower.

The blowers will be provided with sound enclosures and will be housed in the proposed STP control building.

Tertiary Filtration and Disinfection

To meet the stringent effluent BOD_5 and TSS limits for the STP outlined in Section V, a dual-media, dual-bed auto backwash tertiary filter and ultraviolet disinfection will be provided following the BESST extended aeration process. The tertiary filter unit to be provided as a pre-designed unit is the PURESTREAM PST-31.5 that includes filter beds, a clear well chamber, and backwash capabilities to treat secondary effluent to meet the design limits.

Drawings of the tertiary filter unit are included in Drawing No. 3 – Manufacturer's STP Layout. All side walls, bottom, and partitions of the filter will be of structural grade ¼" steel plate, the internal air scour lines will be Schedule 40 perforated PVC pipe, and the backwash surge and backwash pump piping is Schedule 40 PVC pipe with iron pipe fittings.

Disinfection of the effluent from the tertiary filter will be achieved using two (2) Enaqua Model M4 ultraviolet disinfection system units that will also be located in the proposed STP control building. The proposed in-line units will be installed in a flow-through configuration and fed by gravity from the filter. Isolation valves will be provided on the incoming lines to control flow in the event of maintenance, replacement, or repair work on one unit. See Appendix E regarding additional information on the UV disinfection system specified.

Effluent Flow Metering

A flow meter will be provided at a common location in the proposed 5' diameter sampling manhole and effluent flow meter chamber. The instrumentation will provide a visual readout of instantaneous flow using a flow totalizer and a flow recorder and will be located in a dry location adjacent to the control equipment in the proposed STP control building.

Effluent Recharge

The treated effluent from the STP is discharged to Byram River from an existing outfall to the tributary located in the northwest region of the subject parcel. The replacement STP will be connected into the existing buried 6" diameter SDR-35 PVC outfall line at an existing manhole west of the existing STP building. The effluent recharge piping and structures shall remain intact downstream of the referenced manhole, and no sufficient evidence exists to warrant a modification of the existing outfall location.

Sludge Holding Tank

The sludge holding tank will be used to hold wasted sludge prior to disposal and will be provided as a part of the main treatment process tank. Sludge holding tank sizing is based on an equivalent sewage flow of 75 gpd per capita and 3 cubic feet of sludge per capita per month. For the equivalent population of 600 people (45,000 gpd ÷ 75 gpd/capita) and 3 cubic feet of sludge per capita per month, the required tank volume is 1,800 cu.ft. (600 people X 3 cu.ft./capita), or 13,464.0 gallons. The sludge holding zone will measure 14'-0" wide by 9'-9" long (plan view at the water level) with a 10'-6" SWD (12'-0" total sidewall depth), providing a total volume of 1,839.17 cu. ft. (13,757 gallons). This will provide 39.17 cu. ft. (293.00 gal) greater than the 1,800 cu. ft needed of sludge storage, or approximately 30.65 days of storage capacity.

Air will be supplied to the sludge holding tank at a minimum rate of 30 cfm per 1000 cu. ft. of tank volume via non-clog coarse bubble diffusers to keep the contents aerobic to avoid septic odors and contents of the sludge holding tanks in the completely mixed condition. Consequently, the total air supply rate will be as follows:

CFM = 1,839.17 cu.ft. x 30 cfm/1000 cu. ft.
= **55.17 cfm**

Sludge and scum removal will be via scavenger truck to an approved off-site treatment facility, while the sludge supernatant will be returned by gravity flow to the anoxic zone of the treatment process. The supernatant pump provided will be the Goulds Model 3887 WS05BHF submersible sewage pump, which will provide a minimum capacity of 76 gpm at 10.58 ft. TDH to elevate the sludge supernatant back to the equalization tank so decanted liquid can be rescreened prior to entering the treatment tanks. The sludge decant pump will be controlled by a dedicated control panel, which will contain a start timer, a stop timer, and a float override. Pump performance curves can be found in Appendix B.

Chemical Dosing

Dosing of alum to the aeration compartments of the BESST system is required to comply with the Total Phosphorus effluent limit dictated by the SPDES permit. A suitably sized chemical metering pump and storage tank with containment will be provided.

STP Control Building

The proposed STP control building will contain the tertiary filter, two (2) UV units, five (5) blowers, and spare mechanical equipment, electrical panels and controls.

A laboratory area will be provided within the building for the Operator, which shall include an emergency eyewash and safety shower installed as per 10 State Standards requirements. The structure will provide the necessary protection of the process controls and blowers from the elements (cold weather, rain, frost) and a dry, heated environment with proper ventilation for operating personnel for operation and maintenance functions, process testing, and record-keeping. Sufficient lighting shall be provided for safe working conditions.

The laboratory area of the STP control building will provide space to store instruments and test kits for process monitoring. The instruments and test kits to be provided will include:

* Portable dissolved oxygen meter
* pH meter
* Temperature meter or thermometer
* 1-liter graduated cylinders for settleability tests
* Hach DR900 colorimeter for Ammonia, Nitrite and Nitrate Measurement

Sufficient storage within the STP control building has been allotted for tools, spare parts, and lubricants as well as drawer space for the operator to store maintenance logs and treatment plant records. Spare parts and lubricants will be provided as part of the facility construction. Required logs and records will be discussed in detail in the facility Operation and Maintenance Manual to be prepared by the Engineer of Record during the construction period.

A new asphalt driveway will be paved on the west side of the STP control building to allow for Operator and visitor parking as well as a turnaround point for sludge pump trucks.

Standby Power

A standby gas generator will provide power to all the STP equipment during utility power outages. The generator will be pad mounted outside the STP control building in a louvered enclosure and will be provided with residential grade silencer.

Miscellaneous Facility Design Features

Separation Distances - Table B-1 "Recommended Minimum Aerial Separation Distance from Treatment Facility" of the NYS DEC standards for Intermediate Sized Wastewater Treatment Systems requires a 200-ft. minimum radial distance to existing downwind dwellings from STP treatment processes enclosed in a building. Table B-1 also requires a 150-ft. minimum separation distance from the treatment units to neighboring property lines with residential use. The above requirements are met for the replacement STP process as shown in the proposed site plan in Figure 1.

Table B-2 "Minimum Horizontal Separation Distances" presents the 50-ft. distance requirement for sewer piping from drilled wells. The existing private wells on the parcel are all located greater than 50 feet from the proposed gravity sewer piping for the replacement STP.

Water Supply - There shall be a 1" diameter water service for the STP that taps into the water supply distribution system located approximately 30 ft southwest of the proposed STP control building that runs from the proposed water treatment plant. A reduced pressure backflow preventer will be provided on the water supply into the treatment plant to protect the community water supply from possible contamination.

Ventilation - Ventilation will be provided to maintain a dry, comfortable condition inside the control building. Six (6) air changes per hour will be provided.

Testing - The design documents will contain provisions for structure, piping and equipment testing in accordance with the NYS DEC Standards and the requirements outlined in 10 State Standards. This will include structure water tightness testing, piping pressure testing, and operational testing of equipment (including pumps, controls, and alarms).

Certifications - Manufacturers certifications of successful equipment testing and Engineer of Record certification of installation and testing will be provided in accordance with the provisions of Sections F and G of the NYS DEC Standards.

Sampling Locations - Wastewater samples are to be taken at the plant influent (equalization tank) and the plant effluent (flow meter chamber). The sample locations are identified in the SPDES process flow diagram presented in Appendix F – Sampling Locations.

Re: Report on Subsurface Soil and Foundation Investigation
Brynwood Club Development
Bedford Road
Town of North Castle, NY (12-175)

Dear Ms. Maciejowski:

In accordance with our proposals dated 20 November 2012 and 9 September 2013 and your subsequent authorization, we have completed a Subsurface Soil and Foundation Investigation for the referenced site. The purpose of this study is to preliminarily determine the nature and engineering properties of the subsurface soil and bedrock as well as the groundwater conditions for the planned development, to recommend a practical foundation scheme, to determine the allowable bearing capacity of the site soils, and to determine the subsurface soil and groundwater conditions and soil permeability in the new stormwater management areas.

We understand that the planned construction will consist of 21 new structures, roadways, parking areas, retaining walls, tennis courts, underground utilities, and a stormwater management system. To guide us in our study, you have provided us with a site plan that indicates the existing site conditions and the location of the planned new development.

Our scope of work for this project included the following:

1. Reviewed the proposed layout, the existing site conditions, the expected soil conditions, and planned this study.

2. Retained General Borings, Inc. to advance 11 test borings at the subject site.

3. Retained Traficante Contracting Inc. to excavate 18 test pits at the subject site.

4. Inspected ten (10) supplemental test pits that were excavated at the site by Brynwood Club personnel.

5. Laid out the boring and test pit locations in the field, provided full time inspection of the explorations, obtained soil samples, and prepared detailed logs and a Boring and Test Pit Location Plan.

6. Performed three (3) field percolation tests and one (1) borehole permeability test.

7. Performed soil identification tests on selected soil samples in our laboratory.

8. Analyzed the field and laboratory test data and prepared this report containing the results of this study.

SITE DESCRIPTION

The project site is located on the Brynwood Club property on Bedford Road in North Castle, Westchester County, New York. The subject property is currently occupied by a golf club with a clubhouse building, tennis courts, and a few smaller out-structures. The proposed development area is also occupied by an asphalt paved parking lot and driveways as well as grass lawn areas and wooded areas. There are numerous existing underground utilities located throughout the property.

Within the proposed development area, the existing site grades vary from approximately elevation +610.0 at the southwest corner of the subject site and the westernmost portion of the site, to elevation +640.0 on the east side of the existing clubhouse building, to elevation +674.5 in the existing tennis court area in the northeastern portion of the property.

SUBSURFACE CONDITIONS

To determine the subsurface soil, bedrock, and groundwater conditions, we advanced 11 test borings and 28 test pits at the site. The borings and test pits were performed at the locations shown on the enclosed Boring and Test Pit Location Plan. Detailed logs have been prepared and are included in this report. Our field engineer visually identified all soil samples and selected soil samples were tested in our laboratory. The results of these tests are also included in this report.

Soil

The soil descriptions shown on the boring and test pit logs are based on the Burmister Classification System. In this system, the soil is divided into three components: Sand (S), Silt ($) and Gravel (G). The major component is indicated in all capital letters, the

lesser in lower case letters. The following modifiers indicate the quantity of each lesser component:

Modifier	Quantity
trace (t)	0 -10%
little (l)	10% - 20%
some (s)	20% - 35%
and (a)	35% - 50%

The subsurface soil conditions observed in the borings and test pits can be summarized as follows:

Stratum 1 Topsoil — The surface layer at most of the boring and test pit locations consists of brown topsoil that typically ranges from about 0'3" to 1'6" in thickness.

Stratum 2 Existing Fill — Beneath the topsoil and at the surface in three (3) of the borings (B-6, B-8, and B-9) and ten (10) of the test pits (TP-2, TP-9, TP-10, TP-12, TP-14, TP-16, TP-19, TP-21, TP-26, and TP-28) is existing fill that consists of loose to medium dense brown coarse to fine SAND, little (to and) Silt, trace (to some) coarse to fine Gravel. Cobbles, boulders, topsoil, roots, and debris were also present within the fill at some of the test locations. The existing fill was encountered to depths ranging from 1'0" to more than 9'0" beneath the existing ground surface. Test pits TP-9 and TP-28 were terminated in the fill at final depths of 6'9" and 9'0" beneath the ground surface, respectively.

Stratum 3 Sandy Silt or Silty Sand — Underlying the topsoil and existing fill is virgin soil that is comprised of medium dense to dense brown, light brown, or gray brown SILT some (to and), coarse to fine Sand, trace (to little) coarse to fine Gravel or coarse to fine SAND, little (to and) Silt, trace (to and) coarse to fine Gravel, with occasional cobbles and boulders. The Sandy Silt or Silty Sand stratum continued to depths ranging from 2'0" to 12'0" below the existing ground surface. Boring B-8 and test pits TP-8, TP-10, TP-12, TP-19, TP-20, TP-22, and TP-26 were terminated in this stratum at final depths ranging from 5'0" to 12'0" beneath the ground surface.

Stratum 4 Sand or Sandy Gravel — Below the Sandy Silt or Silty Sand at several test locations is completely weathered Gneiss bedrock that generally consists of dense to very dense brown or gray brown coarse to fine SAND, little (to some) Silt, trace (to some) coarse to fine Gravel or coarse to fine GRAVEL and, coarse to fine Sand, trace Silt. Where encountered in the borings and test pits, the completely weathered bedrock was present at depths ranging from 2'0" to 7'0" beneath the ground surface and continued to depths ranging from 4'7" to 15'2" below the existing ground surface.

Stratum 5 Gneiss Bedrock

Gneiss bedrock was encountered at 27 of the 39 test locations. Where encountered in the borings and test pits, gneiss bedrock was observed at depths ranging from 1'8" to 15'2" beneath the existing ground surface. In general, the quality of the bedrock will improve with depth.

At boring B-10, the bedrock was cored between the depths of 2'0" and 7'0". The core recovery was 86% and the Rock Quality Designation (RQD) of the recovered core was 53%. This indicates that the quality of the upper five (5) feet of the Gneiss bedrock is fair. The Gneiss bedrock is moderately weathered and in a blocky and seamy condition.

Groundwater

Observations for groundwater were made during sampling and upon completion of the drilling operations at each boring location. In auger drilling operations, water is not introduced into the boreholes, and the groundwater position can often be determined by observing water flowing into or out of the boreholes. Furthermore, visual observation of the soil samples retrieved during the auger drilling and in the test pits can often be used in evaluating the groundwater conditions.

Groundwater was encountered in test pit TP-8 at a depth of 4'1" (+609.9), in test pit TP-13 at a depth of 4'10" (+631.2), in boring B-8 at a depth of 3'3" (+608.3), in test pit TP-22 at a depth of 4'6" (+470.5), and in test pit TP-28 at a depth of 8'0" (+491.0) beneath the ground surface. Groundwater was not encountered in any of the other borings or test pits that were performed at the subject site during this investigation.

Variations in the location of the long-term water table may occur as a result of changes in precipitation, evaporation, surface water runoff, and other factors not immediately apparent at the time of this exploration. Based on the site conditions, trapped groundwater may be encountered in the silty site soils and/or along the soil/rock interface during wet periods. Proper groundwater control measures will be required in the event that trapped water is encountered in the site excavations.

Bedrock

Bedrock was encountered in 27 of the 39 explorations that were performed at the site during this investigation. Completely weathered bedrock was encountered at ten (10) test locations at depths ranging from 2'0" to 7'0" below the existing ground surface. Harder bedrock was encountered in the remaining locations and below the completely weathered rock at depths ranging from 1'8" to 15'2" beneath the ground surface. These depths correspond to bedrock elevations ranging between approximately elevation +471.0 and elevation +669.8.

Based on the boring and test pit data and the site plans provided to this office, bedrock was encountered above the planned finished floor elevation in portions of the site. The observed depth to bedrock at each boring and test pit location is summarized in Table 1 in the following section of this report.

The bedrock encountered at the site consists of weathered Gneiss. Based on our experience, the in-situ bedrock will range from highly weathered, fractured rock to massive, intact rock. Penetration into the bedrock with excavation equipment will depend of the degree of weathering and fracturing in the rock. We anticipate that the ”rippability” of the bedrock will be variable and very limited. Based on our observations, harder rock will be encountered and blasting and/or the use of hydraulic hammers will be required to excavate the harder, intact bedrock. Rock removal is discussed further in a separate section of this report.

EVALUATION

At the time of this report, the proposed layout, the proposed finished floor elevations, and the site grading were preliminary. Therefore, the following evaluation is preliminary in nature and has been generalized for the expected development. The recommendations below are intended for planning purposes only and are not intended for final design and construction. Additional subsurface investigation will be required for the proposed buildings and retaining walls. Preliminarily, we estimate that an additional 12 to 15 explorations will be required for this project. Once the site plans have been further developed, a copy shall be forwarded to our office so that we can review it along with the recommendations in this report. At that time, we will provide specific recommendations for additional subsurface investigation. After the supplemental investigation has been completed, additional geotechnical recommendations will be provided for the project site. As a result, the recommendations within this report are subject to change.

Based on the preliminary site plans, we understand that the planned construction will consist of 21 new structures that will include seven (7) golf residences, seven (7) club villas, five (5) golf cottages, one (1) fairway residences building, and one (1) clubhouse building. The proposed construction will also include new asphalt paved roadways and parking areas, retaining walls, tennis courts, underground utilities, and a stormwater management system.

The grading plan provided to this office indicates that the proposed finished floor elevations vary across the site. In addition, the fairway residences, golf cottages, and golf residences will have basements. Based on the existing and proposed grades, cuts ranging up to approximately 14’0” and fills ranging up to approximately 10’0” are expected to achieve the proposed floor slab subgrade elevations. In the proposed pavement areas, cuts ranging up to approximately 6’0” and fills ranging up to approximately 8’0” are expected to achieve the proposed pavement subgrade elevations.

The boring and test pit data indicates that there is existing fill (Stratum 2) present in portions of the site to depths ranging from 1’0” to more than 9’0” below the existing ground surface. The existing fill generally consists of loose to medium dense Sand with varying amounts of Silt and Gravel and occasional cobbles, boulders, topsoil, roots, and debris. Underlying the existing fill is medium dense to dense Sandy Silt or Silty Sand (Stratum 3). The Sandy Silt or Silty Sand is underlain by dense to very dense completely weathered Gneiss bedrock (Stratum 4) in areas followed by more competent Gneiss bedrock (Stratum 5), which was encountered at depths ranging from 2’0” to 15’2” beneath the existing ground surface. The existing fill and bedrock observations are summarized in Table 1 below.

Table 1 - Summary of Boring and Test Pit Data

Boring or Test Pit No.	Approximate Ground Surface Elevation	Depth to Bottom of Existing Fill (Elevation)	Depth to Weathered Bedrock (Elevation)	Depth to Bedrock or Auger Refusal (Elevation)

TP-28: Terminated in the Existing Fill

Removal of Existing Structures from New Building and Pavement Areas

Building Areas

The site plan indicates that existing structures are present in some of the proposed building areas. The existing structures will be removed as part of the proposed development. All debris resulting from the demolition of these items must be completely removed from the new building areas, extending at least ten (10) feet beyond the new building limits, where practical. This shall include the complete removal of all foundations, walls, slabs, utilities, sidewalks, pavement, and miscellaneous debris. Where the removal of existing items or associated materials extends below the planned building, the resulting excavations shall be backfilled with new compacted fill as described below.

Existing utilities, where they are encountered within the planned building areas, should be either abandoned or rerouted around the new structures. Once the utility has been rerouted or abandoned, the section of pipe and any associated structure within the building areas should be completely removed. The removal of the pipe and structure must also include any loose fill around the pipe or structure. After the pipe, associated structure, and associated loose backfill have been removed, the resulting excavation shall be backfilled with new controlled fill as described below.

New compacted fill shall consist of either suitable on-site soil or imported sand and gravel. Imported sand and gravel fill shall contain less than 20% by weight passing a No. 200 sieve. The fill shall be placed in layers not exceeding one (1) foot in loose thickness. In the proposed building area, new fill shall be compacted to at least 95% of its Maximum Modified Dry Density (ASTM D1557). Each layer shall be compacted, tested, and approved prior to placing subsequent layers.

Pavement Areas

In the proposed pavement areas, any existing structures and debris resulting from the demolition of the structures must be completely removed from the new pavement areas, extending at least five (5) feet beyond the new paving limits, where practical. The

excavations resulting from the removal of existing items shall be backfilled using controlled compacted fill. New fill shall consist of either suitable on-site soil or imported sand and gravel placed in one (1) foot loose layers and compacted to at least 92% of its Maximum Modified Dry Density (ASTM D1557).

Implications of Existing Fill

The boring and test pit data indicates that existing fill is present in portions of the site. Where encountered in the borings and test pits, the fill extended to depths ranging from 1'0" to more than 9'0" beneath the existing ground surface. These depths correspond to elevations ranging from approximately +424.6 to elevation +670.2. The depth of the existing fill is expected to be variable and may be deeper in unexplored areas of the site and around the existing site buildings.

The existing fill is not an acceptable bearing material for the new building foundations or floor slabs. The consistency and density of the fill material are not predictable. Certain areas may contain clean dense soils while other areas may contain loose material, topsoil, and/or debris. The existing fill creates the possibility of intolerable differential settlements under loading.

To eliminate the potential for damaging differential settlements, we recommend that the existing fill be completely removed from the new building areas. Based on the existing grades and the proposed finished floor elevations, we expect that some of the existing fill will be removed during the planned building excavations. However, existing fill is expected to be encountered below the planned subgrade elevation in portions of the site. Undercutting of the subgrade will be required in these areas to remove the existing fill or otherwise unsuitable materials from the building areas. The over-excavated areas shall then be replaced with new structural fill, as necessary, to achieve the planned subgrade elevations.

To further evaluate the existing fill conditions in and around the planned building areas, we recommend that a series of supplemental test pits be performed at the time of construction. The test pits should be conducted under the full time observation of a Carlin-Simpson & Associates representative. These test pits will allow us to confirm the consistency, thickness, and horizontal limits of the existing fill material.

Provided that the existing fill and any other unsuitable materials encountered during construction are removed, it is our opinion that the new structural fill and virgin soils can adequately support the new building foundations and floor slabs.

Rock Removal - Blasting Issues

As discussed above, bedrock was encountered at 27 of the 39 test locations during this study. The bedrock was encountered at depths ranging from 1'8" to 15'2" beneath the ground surface. These depths correspond to bedrock elevations ranging between approximately elevation +611.5 and elevation +669.8. Based on the site plans provided to this office, bedrock was encountered above the planned finished floor elevation in portions of the site. Bedrock may also be encountered at higher elevations in the unexplored areas of the site.

The bedrock encountered in the borings and test pits consists of weathered Gneiss. Based on our experience, the in-situ bedrock will range from highly weathered, fractured rock to massive, intact rock. To excavate the rock, the upper 1'0" to 5'0" of rock may be "rippable" by using large construction equipment. The use of hydraulic hammers and/or blasting will be required in order to achieve deeper excavations. Zones of weathered rock may exist deeper than 5'0" but conditions are expected to be highly variable. Hard rock will be encountered during construction.

In order to develop the site, rock removal will be required in areas to achieve the proposed grades. Rock removal may also be required for the new pavement and utilities in portions of the site. Rock blasting will likely be required to achieve the proposed grades in areas. Nearby buildings and existing underground utilities could be affected by the blasting.

The Blasting Contractor should avoid over-blasting the rock. Over-blasting will disturb the deeper intact rock that will be used as bearing material for the proposed foundations and floor slab.

The blasting operation will be monitored by a seismologist using a seismograph. The Peak Particle Velocity emanating from any blast will be restricted to 2.0 in/sec. Each blast will be monitored to insure that this criteria is not exceeded.

The U.S. Bureau of Mines [Nicholas et al (1971)] has established that a threshold of 4.0 in/sec will likely crack plaster and thus they recommend that the safe vibrational criterion be 2.0 in/sec. This criterion has been used successfully in the industry. Each blast will be monitored independently to insure that this criterion is not exceeded. The monitoring results shall be provided to the Blasting Contractor as soon as possible so that the blasting program can be modified if necessary.

We recommend that a minimum of four (4) monitoring points be established, to the north, east, south and west of the planned blast area. The seismograph sensors should be placed near the closest structure and at any structures identified during the pre-blast survey that are considered to be susceptible to vibration damage.

Prior to the start of any construction, a Blasting Management Plan shall be prepared by the Blasting Contractor for this project. This plan shall be in accordance with State regulations and the Explosive Materials Code, NFPA No. 495, National Fire Prevention Association. Additionally, all blasting should adhere to the provisions of 29 CFR Ch. XVII Section 1910.109 for explosives and blasting agents and to all local requirements.

Prior to any blasting work being done, a licensed professional engineer shall be retained to perform a detailed pre-blast survey of existing structures located within 500 feet of the planned blast area. The pre-blast survey shall be conducted in accordance with the requirements of local authorities. A copy of all reports prepared by the licensed engineer shall be submitted to the Town Engineer and the Owner's representative in a timely manner.

Prior to the beginning of blasting, a notice will be sent to all residential and commercial property owners within a 500 foot radius of the blast area. This notification will

be given at least 48 hours before blasting takes place. A contact person will be established and named in this notice to respond to all concerns raised by nearby residents during the blasting phase of the project. The contact person will respond to any inquiries within 24 hours.

Preparation of New Building Areas and Removal of Existing Fill

In order to prepare the building areas for construction, all surface materials such as topsoil, asphalt, and surface vegetation shall be removed from the planned building areas, extending at least ten (10) feet beyond the new construction limits, where feasible.

The boring data indicates that existing fill is present within portions the proposed building areas. Fill material may also be present in other unexplored portions of the site. Where encountered in the test borings, the existing fill extended to depths ranging from about 1'0" to 7'0" below the existing ground surface. As shown in Table 1 above, the approximate bottom of the fill material ranges from elevation +603.5 to elevation +670.2. The existing fill is expected to vary in thickness across the site and may extend deeper in the unexplored areas and around the existing site structures.

After the surface materials are removed, the existing fill shall be excavated from the new building areas. The removal of the existing fill from the new building areas shall extend through the existing fill, down to the virgin soil or weathered bedrock. At the bottom of the excavation, the removal of the unsuitable material shall extend horizontally beyond the building lines a minimum distance of three (3) feet plus a distance equal to the depth of the excavation below the planned finished floor elevation. For example, if the removal of the existing fill extends vertically five (5) feet below the planned finished floor elevation, the excavation must extend horizontally a minimum of eight (8) feet (3 feet plus 5 feet) beyond the new building line at that location.

The removal of the existing fill from the planned building areas shall be performed under the full time observation of Carlin-Simpson & Associates. The on-site representative from Carlin-Simpson & Associates shall direct the Contractor during this operation to ensure that all of the unsuitable material has been removed from the proposed building areas.

During the removal of the unsuitable material from the building areas, the Contractor should segregate the potentially re-usable existing fill material from the non-reusable fill (i.e. debris and topsoil). The on-site representative from Carlin-Simpson & Associate shall evaluate the suitability of the excavated materials for use as structural fill during the excavation and prior to its re-use. Potentially usable fill should be stockpiled and covered with tarps or plastic sheeting for protection from excess moisture. Any fill material that is wet must be dried prior to its re-use.

After the surface materials and existing fill have been removed and prior to the placement of new structural fill, the exposed subgrade must be graded level and proofrolled by several passes of a vibratory drum roller. The proofrolling operation is necessary to densify the underlying soils. Carlin-Simpson & Associates shall be retained to observe the proofrolling of the subgrade. If any soft or otherwise unsuitable soils are noted, the

unsuitable material shall be removed and replaced with new structural fill. Carlin-Simpson & Associates shall be responsible for determining what material, if any, is to be removed and will direct the contractor during this operation.

New structural fill required to achieve final grades shall consist of either suitable on-site soil or imported sand and gravel. Imported fill shall contain less than 20% by weight passing a No. 200 sieve. The structural fill shall be placed in layers not exceeding one (1) foot in loose thickness and each layer shall be compacted to at least 95% of its Maximum Modified Dry Density (ASTM D1557). Each layer must be compacted, tested, and approved prior to placing subsequent layers. The suitability of the excavated soil for reuse as structural fill is discussed in a following section of this report.

After the installation of structural fill has been completed to the required subgrade elevations, the virgin soil and new structural fill may be used to support the proposed building foundations and floor slabs.

New Building Foundations

According to the boring data, the foundation bearing materials will consist of medium dense to dense virgin soil, weathered bedrock, and new structural fill. Foundations for the proposed structures may be designed as a shallow spread footing bearing on the virgin soil, weathered bedrock, or new structural fill utilizing a net allowable bearing pressure of 4,000 psf (2.0 TSF).

Exterior footings shall bear at a depth of at least 42 inches below finished outside grade for protection from frost. Interior column footings may bear on the virgin soil, weathered bedrock, or new structural fill just below the floor slab provided the building is heated during winter. Column footings shall have a minimum dimension of 30 inches. The wall footings shall have a minimum width of 18 inches.

Prior to the placement of formwork, reinforcement steel, and concrete, the bearing subgrade soil shall be cleaned of all loose soil and compacted with several passes of a small vibratory drum trench compactor (i.e. Wacker Model RT560), a heavy vibratory plate tamper (i.e. Wacker BPU 3545A or equivalent), or “jumping jack” style tamper (i.e. Wacker Model BS 600). This must be performed under the inspection of a representative from Carlin-Simpson & Associates. If instability is observed during the compaction of the bearing subgrade, the soft soil shall be removed and replaced with new compacted fill.

Where rock is encountered in the foundation excavations, “Special Construction Procedures” must be employed. When continuous wall footings or closely spaced column footings (20 feet or less) bear on dissimilar material (i.e. rock and soil) the potential for differential movement exists. A footing bearing in rock will not move, whereas a footing bearing on soil will settle slightly due to the compressive nature of all soils when subjected to new loads. The area between movement and non-movement will develop a (shear) stress point. Cracks in foundations and walls will be the result from such movement. Therefore, continuous wall footings must bear either entirely on rock or entirely on soil for any individual building. Alternatively, for larger structures, transition zones can be constructed to create a gradual transition from a soil to a rock bearing subgrade.

Adjacent column footings greater than 20 feet apart may bear on dissimilar material (i.e. soil and rock). Any individual column footing must bear entirely on the same type bearing material (i.e. all soil or all rock).

Where rock and soil both exist at the bearing elevation within a foundation excavation, the footings must either be lowered to bear entirely on rock, or a minimum of 18 inches of rock must be removed from below planned footing bottom. The over-excavated 18 inches must then be filled with a granular material having a maximum particle size of ½-inch and containing at least 15% but not more than 30% material by weight passing a No. 200 sieve. The fill shall be placed in six (6) inch layers and each layer shall be compacted to at least 95% of its Maximum Modified Dry Density (ASTM D1557). This procedure will create a "cushion" atop the rock and reduce the potential for differential movement. For soft, rippable rock, this procedure will not be required.

If during the excavation for continuous foundations, the transition from soil to rock is gradual (i.e. from medium dense soil to dense weathered rock to very dense rock) over a distance of 20 feet or more, the "Special Construction Procedures" may not be required. This would have to be evaluated in the field on a case-by-case basis by the representative from Carlin-Simpson & Associates at the time of construction.

Where the transition from rock to soil is abrupt within the excavation for continuous wall foundations, transition zones can be constructed by over-excavating the rock in steps and increasing the "soil cushion" thickness over a distance of 24 feet or more. To construct the transition zone, the bedrock is over-excavated in a series of steps, each step being six (6) inches in depth and at least eight (8) feet in length. The first step is six (6) inches deep, the second step is 12 inches deep, and the final step is 18 inches deep. The over-excavation is then backfilled with the soil cushion material described above.

Floor Slab

After the footings and foundation walls are installed, fill will be required to backfill the excavations and to raise grades in the building areas to the slab subgrade elevations. New fill for the floor slab shall consist of either suitable on-site soil or imported sand and gravel containing less than 20% material by weight passing a No. 200 sieve. The fill shall be placed in layers not exceeding one (1) foot in loose thickness and each layer shall be compacted to at least 92% of its Maximum Modified Dry Density (ASTM D1557). Fill layers shall be compacted, tested, and approved before placing subsequent layers.

The floor may be designed as a slab on grade, bearing on virgin soil, weathered bedrock, bedrock, or new structural fill. We recommend a Modulus of Subgrade Reaction (k) of 200 pounds per cubic inch (pci) be used for design. A six (6) inch layer of 3/4-inch crushed stone is recommended beneath the concrete slab for additional support and drainage. In the event that the floor slab is constructed directly on Gneiss bedrock, a minimum of 12 inches of crushed stone or DGA should be provided beneath the floor slab for drainage and to act as a cushion on the rock. Sump pits and pumps are recommended where basements are planned.

Settlement

Settlement of individual footings, designed in accordance with recommendations presented in this report, is expected to be within tolerable limits for the proposed structure. For footings placed on natural soils or new compacted fill approved by Carlin-Simpson & Associates and constructed in accordance with the requirements outlined in this report, maximum total settlement is expected to be on the order of 1/2-inch or less. Maximum differential settlement between adjacent columns or load bearing walls is expected to be half the total settlement.

The above settlement values are based on our engineering experience with similar soil conditions and the anticipated structural loading, and are to guide the Structural Engineer with his design. To minimize difficulties during the foundation installation phase, it is critical that Carlin-Simpson & Associates be retained to observe the foundation bearing surfaces and to confirm the recommended bearing pressures and that the existing fill and unsuitable materials have been removed from beneath the new foundations.

Foundation Walls

In the event that foundation walls are required, the soil adjacent to the building walls will exert a horizontal pressure against the walls. This pressure is based on the soil density and Coefficient of Earth Pressure at Rest (k_o), which is applicable to non-yielding building walls. We estimate that the backfill material will have an in-place (moist) density of about 130 pcf and a k_o of 0.5. Based on these properties, the soil will produce an Equivalent Fluid Pressure of 65 pcf against the building walls.

For sliding, the coefficient of friction between concrete and the virgin site soils or new structural fill is 0.45. For clean sound rock, a friction coefficient of 0.55 can be used. Where passive lateral earth pressure is to be included in the design of the wall, a design value of 195 psf/ft may be used. This is based on a Coefficient of Passive Earth Pressure (k_p) of 3.0, an in-place soil backfill density of 130 pcf, and a factor of safety of 2.0.

Where foundation walls are required, we recommend that a footing drain be placed around the exterior of the new structure to prevent water from accumulating against the foundation wall. This drain may consist of a minimum four (4) inch diameter, rigid wall perforated PVC pipe surrounded by at least 12 inches of 3/4-inch clean crushed stone. The stone shall be wrapped in a geotextile fabric, Mirafi 140N or equivalent. The foundation drainpipe should be extended to daylight or to the stormwater collection system. The outside face of the foundation wall, where it extends below grade, must be damp proofed or waterproofed.

The foundation walls should be backfilled with suitable structural fill placed in layers up to one (1) foot in loose thickness. The new fill should be compacted with a vibratory drum trench compactor (i.e. Wacker Model RT560), a heavy vibratory plate tamper (i.e. Wacker BPU 3545A or equivalent) or “jumping jack” style tamper (i.e. Wacker Model BS 600) to at least 92% of its Maximum Modified Dry Density (ASTM D1557). Heavy equipment should not be operated near the wall as damage to the wall could occur.

Outside the structure, the backfill placed adjacent to the foundation walls and above the footing drain shall consist of either clean crushed stone or an imported sand and gravel mixture containing less than 10% by weight passing a No. 200 sieve and placed in layers not exceeding one (1) foot in thickness. This clean sand and gravel or crushed stone backfill shall extend a minimum of one (1) foot horizontally from the back face of the foundation walls, and shall extend vertically up the wall face to two (2) feet below the finished ground surface elevation.

Beyond this point, the foundation walls should be backfilled with suitable soil placed in layers up to one (1) foot in thickness. The new fill should be compacted with a vibratory drum trench compactor (i.e. Wacker Model RT560), a heavy vibratory plate tamper (i.e. Wacker BPU 3545A or equivalent), or "jumping jack" style tamper (i.e. Wacker Model BS 600) to at least 92% of its Maximum Modified Dry Density (ASTM D1557). Heavy equipment should not be operated near the walls as damage to the walls could occur. Material excavated from the cut areas on site will be suitable for reuse as compacted fill, provided that it remains relatively dry enough to be adequately compacted to the required density and does not contain any debris or organic material (i.e. topsoil and roots).

Seismic Design Considerations

From site-specific test boring data, the Site Class was determined from Table 1615.1.1 of the New York State Building Code. The site-specific data used to determine the Site Class typically includes soil test borings to determine Standard Penetration resistances (N-values). Based on the average N-values in the upper 100 feet of soil profile, the site can be classified as Site Class C – Very Dense Soil and Soft Rock Profile.

New structures should be designed to resist stress produced by lateral forces computed in accordance with Section 1615 of the New York State Building Code. The values in Table 2 shall be used for this project. Based on the information obtained from the borings, it is our opinion that the potential for liquefaction of the native soils at the site due to earthquake activity is relatively low.

Table 2 – Seismic Design Parameter Values

Mapped Spectral Response Acceleration for Short Periods, [Fig 1615 (1)]	S_S=0.347g
Mapped Spectral Response Acceleration at 1-Second Period, [Fig 1615 (2)]	S_{S1}=0.070g
Site Coefficient [Table 1615.1.2 (1)]	F_a=1.20
Site Coefficient [Table 1615.1.2 (2)]	F_v=1.70
Max Considered Earthquake Spectral Response for Short Periods [Eq 16-16]	S_{MS}=0.416g
Max Considered Earthquake Spectral Respond at 1-Second Period [Eq 16-17]	S_{M1}=0.119g
Design Spectral Response Acceleration for Short Periods [Eq 16-18]	S_{DS}=0.278g
Design Spectral Response Acceleration for 1-Second Period [Eq 16-19]	S_{D1}=0.079g

Site Retaining Walls

In order to develop the site, retaining walls will be required in areas. The site retaining walls may be designed as either cast-in-place steel reinforced concrete walls or geogrid reinforced modular block (MSE) walls. The preliminary site plans show five (5)

retaining walls. The maximum exposed height of these walls ranges from approximately seven (7) feet to 12 feet but the top and bottom wall elevations were not finalized at the time of this report.

The following recommendations are preliminary in nature based on the boring and test pit data from other areas of the project site during this investigation. The recommendations below are intended for planning purposes only and are not intended for final design and construction. A supplemental subsurface investigation is required for the proposed retaining walls so that additional design recommendations can be provided.

In the event that existing fill materials are present within the proposed wall areas, these materials must be completely removed from the limits of new wall construction. The removal of the topsoil or other unsuitable fill materials shall extend horizontally a minimum distance of five (5) feet beyond the front face of the new wall or extend horizontally a minimum distance equivalent to the vertical depth of the required excavation below the proposed wall base or foundation bearing elevation, whichever is greater. This is required to ensure that all unsuitable material has been removed from beneath the wall base or foundation zone of influence, which shall be defined by an imaginary plane projecting downward and away from the front edge of the wall base or foundation on a one horizontal to one vertical (1H:1V) projection.

The foundations for the new retaining wall may be placed on the virgin soil, weathered bedrock, or on new compacted fill approved by Carlin-Simpson & Associates. New compacted fill shall consist of either suitable on-site soil or imported sand and gravel. Imported fill shall contain less than 20% by weight passing the No. 200 sieve. The fill shall be placed in one (1) foot thick loose layers and compacted to at least 95% of its Maximum Modified Dry Density. Preliminarily, the footings or base of the wall can be designed using a net design bearing pressure of 4,000 psf (2.0 TSF).

For MSE walls, the wall base or foundation must be adequately embedded for internal and global stability. The embedment depth will be determined by the Wall Design Engineer. For reinforced concrete walls, the footing or base of the wall shall bear at least 42 inches below finished grade of the outside face of the wall for protection from frost. The wall foundation or base may bear at shallower depths when installed directly on the bedrock since rock is not susceptible to frost. Where both soil and rock are encountered within the wall foundation or base excavation, the “Special Construction Procedures” discussed above for the building foundations must be utilized.

Drains must be provided behind the retaining walls to prevent the buildup of hydrostatic pressure against the walls. The drain should consist of a 4-inch diameter perforated PVC pipe, surrounded with 3/4-inch clean crushed stone and wrapped in a geotextile fabric, Mirafi 140N or equivalent. The drain should be installed behind the base or foundation of the retaining wall to collect the water behind the wall and be connected into the site stormwater collection system or extended to daylight beyond the wall area.

Backfill placed directly behind the retaining walls shall consist of either suitable on-site soil or imported sand and gravel containing less than 20% by weight passing a No. 200 sieve. Each layer shall be compacted using a hand guided mechanical tamper to 92% of its

Maximum Modified Dry Density (ASTM D1557). Excessive compaction adjacent to the retaining walls must be avoided. Layers shall be tested and approved before placing subsequent layers. Large compaction equipment must not be used within ten (10) feet of the new walls to prevent potential damage to the walls.

The soil adjacent to the site retaining walls will exert a horizontal pressure against the walls. This pressure is based on the soil density and the Coefficient of Active Earth Pressure (k_a). We estimate that the backfill material will have an in-place (moist) density of about 130 pcf and an angle of internal friction (ϕ) of 30^o. For design, soil cohesion is assumed to be zero for the foundation soil, retained soil, and reinforced backfill. The active earth pressure coefficient (k_a) is 0.33 provided the grade behind the wall is level. Based on these properties, the retained soil will produce an Equivalent Fluid Pressure of 42.9 pcf against the retaining walls. If a sloping grade exists behind the new walls, the k_a and the Equivalent Fluid Pressure must be adjusted accordingly. In addition, any surcharge loads from structures, vehicles, or other retaining walls (i.e. tiered walls) must be considered in the wall design.

For sliding, the friction coefficient between mass concrete and the virgin site soils or new compacted fill is 0.45. For clean sound rock, a friction coefficient of 0.55 can be used. Where passive lateral earth pressure is to be included in the design of the wall, a maximum design value of 195 psf/ft may be used. This is based on a Coefficient of Passive Earth Pressure (k_p) of 3.0, an in-place soil backfill density of 130 pcf, and a factor of safety of 2.0.

The Wall Design Engineer shall prepare a complete wall design (i.e. drawings, specifications, and calculations), which shall be designed and sealed by a Professional Engineer registered in the State of New York and submitted to Carlin-Simpson & Associates for review and approval. MSE retaining walls shall be designed in accordance with the recommendations of the NCMA Design Manual for Segmental Retaining Walls (Current Edition).

The MSE wall design shall consider the internal stability of the reinforced soil mass and shall be in completed accordance with acceptable engineering practice. In addition, external stability, including sliding, overturning, and bearing, as well as global slope stability shall be evaluated in accordance with acceptable engineering practice.

The MSE Wall Designer Engineer shall be responsible for determining the required geogrid reinforcement lengths and elevations based on his stability analysis (including global stability) and the properties of the geogrid reinforcement used in the design. We anticipate that in the critical areas of the wall, global stability will be the controlling design criteria for the design of the geogrid reinforcement.

Stormwater Management Areas

We understand that the planned development will include one or more stormwater management areas. The preliminary grading plan shows a proposed infiltration basin with a forebay in the western portion of the project site. The plan also indicates that the basin will have a bottom elevation at +610.0. We also understand that there is an alternate stormwater

management area in the southwestern portion of the site, near the proposed fairway residences building. In addition, stormwater management areas will likely be required throughout the golf course property. However, at the time this report was prepared, the proposed stormwater management system had not been designed and the location, grades, and invert elevations of the system had not been finalized.

During this study, four (4) borings, one (1) test pit, one (1) borehole permeability test, and four (4) percolation tests were performed within or near the planned stormwater management areas. An addition ten (10) test pits (TP-19 through TP-28) were excavated at potential stormwater management areas throughout the golf course property. The tests were performed at the locations shown on the attached Boring and Test Pit Location Plan. The proposed test depths were provided by the project Site Engineer. The test depths were modified, however, based on the depth to bedrock encountered at the test locations.

The soil conditions encountered within the proposed infiltration basin area consist of a surface layer of topsoil (Stratum 1), approximately 0'6" to 0'9" in thickness, followed by existing fill (Stratum 2) in boring B-6. Below the topsoil and fill is virgin soil that consists of layers of Sandy Silt, Silty Sand, Sandy Gravel, Gravelly Sand, or Silty Gravelly Sand (Strata 3 and 4) followed by Gneiss bedrock (Stratum 5). Bedrock was encountered in the proposed infiltration basin area at depths ranging from 2'8" to 8'6" beneath the ground surface. These depths correspond to bedrock elevations ranging between elevation +611.5 and elevation +617.3, which is above the proposed bottom elevation of the infiltration basin.

In the alternate stormwater management area, the topsoil was underlain by approximately 5'6" of existing fill (Stratum 2) followed by layers of Sandy Silt and Silty Sand (Stratum 3). Groundwater was encountered in this portion of the site at depths ranging from 0'6" to 3'3" below the ground surface, which corresponds to groundwater levels ranging from approximately elevation +608.3 to elevation +613.2.

The subsurface soil and groundwater conditions encountered in the potential stormwater management areas throughout the golf course property vary across the site. The boring and test pit observations are summarized in Table 1 above.

In December 2012 and January 2013, permeability tests were performed within the proposed stormwater management areas. One (1) borehole permeability test (BP-4) and four (4) percolation tests (P-1 through P-4) were performed. The infiltration rates at the test locations are summarized in Table 3 below.

Table 3 – Field Permeability Test Results

Permeability Test No.	Permeability Test Depth (Elevation)	Permeability Rate	Soil Description
BP-4	7'0" (+621.0)	2.4 in/hour	Brown coarse to fine SAND, little Silt, some (+) coarse to fine Gravel
P-1	3'6" (+616.5)	>20 in/hour	Brown coarse to fine GRAVEL and, coarse to fine Sand, trace Silt
P-2	1'8" (+610.3)	NR	*Groundwater encountered 0'6" below the ground surface*

Permeability Test No.	Permeability Test Depth (Elevation)	Permeability Rate	Soil Description
P-3	2'8" (+613.3)	>20 in/hour	Brown coarse to fine SAND, some Silt, and (-) coarse to fine Gravel
P-4	2'0" (+613.0)	NR	*Groundwater encountered 1'10" below the ground surface*

NR – Not Recorded

Based on the field tests, the virgin soil in the areas of tests P-1 and P-3 has a permeability rate that exceeds 20 inches per hour. However, these tests were performed at elevations of +616.5 and +613.3, which are approximately 6'6" and 3'3" higher than the planned bottom of the proposed infiltration basin. Bedrock was encountered at depths of 4'9" (+615.3) and 5'6" (+611.5) below the surface at these test locations. In the event the virgin soil in the areas of tests P-1 and P-3 can be utilized for the stormwater management system, a permeability rate of 10 inches per hour should be used for preliminary design. This design permeability rate includes a factor of safety of 2.0.

Field permeability tests could not be performed at test locations P-2 and P-4 during this study since groundwater was encountered at depths of 0'6" (+611.5) and 1'10" (+613.2) below the ground surface, respectively. Should stormwater management areas be planned in other portions of the site, they must be evaluated on a case-by-case basis.

The stormwater management system should be designed in accordance with the applicable New York State Department of Conservation (NYSDEC) regulations and the New York State Stormwater Management Design Manual (August 2010). The testing requirements are outlined in Appendix D of the manual. The testing that was performed during this preliminary study was for initial feasibility testing for the stormwater management areas. Therefore, additional testing within the proposed subsurface system areas will be required to confirm the soil conditions and infiltration rates at the bottom of the system and to finalize the design of the system.

Pavement

We understand that the proposed construction will also include new asphalt paved driveways and parking areas. Based on the preliminary grading plan provided to this office, cuts ranging up to approximately 6'0" and fills ranging up to approximately 8'0" are anticipated to achieve the proposed pavement subgrade elevations. To prepare the new pavement areas, the existing surface materials (i.e. topsoil, vegetation, asphalt, etc.) must be removed from the planned pavement areas.

After all surface materials have been removed; the exposed subgrade that is either at or below the planned subgrade elevation shall be proofrolled with a large vibratory drum roller (i.e. Dynapac 250 or equivalent) to densify the underlying soils. The on-site representative from Carlin-Simpson & Associates shall witness the proofrolling operation. If any excessive movement is noted during the proofrolling, the soft or unsuitable soil shall be removed and replaced with new compacted fill.

Areas where existing fill is encountered shall be compacted in place. Carlin-Simpson & Associates must evaluate these areas for the presence of soft or unsuitable material within the existing fill matrix. Portions of this fill may have to be removed and replaced with new compacted fill. Carlin-Simpson & Associates will determine this during construction.

Where new fill is required to achieve final grades, it shall consist of either suitable on-site soil or imported sand and gravel. Imported sand and gravel shall contain less than 20% by weight passing a No. 200 sieve. New fill shall be placed in layers not exceeding one (1) foot in loose thickness and each layer shall be compacted to at least 92% of its Maximum Modified Dry Density (ASTM D1557). After the planned subgrade has been proofrolled and new compacted fill has been placed as required, the new pavement subbase may be placed on the existing site soils and new compacted fill.

When new fill is placed on a sloped subgrade, the fill layers must be benched a minimum of three (3) feet into the existing embankment. Fill layers shall be placed in horizontal layers, beginning at the base of the slope. End dumping over the top of a slope is not permitted.

The new pavement subbase may be placed on engineer-approved densified existing fill, virgin soil, or new compacted fill. A minimum of six (6) inches of dense graded aggregate (DGA) is recommended for the subbase layer for drainage and additional pavement support. We recommend that the following pavement sections be used for the parking lots and driveways. These pavement sections are subject to local government approval.

Parking Lots (Light Duty)

1 ½"	Asphalt Wearing Surface Course	NYSDOT, Type 6F
2"	Asphalt Base Course	NYSDOT, Type 1
6"	Stone Subbase (DGA)	NYSDOT, Type 4
	Approved Compacted Subgrade (Minimum CBR = 10)	

Driveways (Medium Duty)

1 ½"	Asphalt Wearing Surface Course	NYSDOT, Type 6F
2 ½"	Asphalt Base Course	NYSDOT, Type 1
8"	Stone Subbase (DGA)	NYSDOT, Type 4
	Approved Compacted Subgrade (Minimum CBR = 10)	

Based on the boring and test pit data, we anticipate that the existing site soils and new compacted fill will provide a CBR value that is equal to or greater than 10, which can adequately support the above pavement sections.

Utilities

New utilities may bear in the virgin soil, existing fill, new compacted fill, weathered rock, or rock. The bottom of all trenches should be excavated clean so a hard bottom is provided for pipe support. If any soft areas or unsuitable existing fill conditions are

encountered during the construction operation, these materials must be removed and replaced with new compacted fill.

In the event that the trench bottom becomes soft due to the inflow of surface or trapped water, the soft soil shall be removed and the excavation filled with a minimum of six (6) inches of 3/4-inch clean crushed stone to provide a firm base for support of the pipe. Sump pits and pumps should be adequate to keep the excavations dry.

After the utility is installed, the trench must be backfilled with compacted fill. The fill shall consist of suitable on-site soil or imported sand and gravel containing less than 20% by weight passing a No. 200 sieve. Large rock fragments must not be placed directly against the pipe. Controlled compacted fill shall be placed in one (1) foot loose layers and each layer shall be compacted to at least 92% of its Maximum Modified Dry Density (ASTM D1557). The backfill must be free of topsoil, debris and large boulders or rock fragments.

Temporary Construction Excavations

Temporary construction excavations shall be conducted in accordance with the most recent OSHA guidelines or applicable federal, state, or local codes. Based on the results of the borings and test pits, we believe the site soils and rock would have the following classifications as defined by OSHA guidelines.

Soil/Rock Type	Possible Classification
On Site Fill	Type "C"
Virgin Sandy Soils	Type "B" or "C"
Weathered or Intact Bedrock	Type "A" or Stable Rock

Further evaluation of the site soil deposits will be required in the field by a qualified person at the time of the excavation to determine the proper OSHA classification and allowable slope configuration. Temporary support (i.e. sheeting and shoring) should be used for any excavation that cannot be sloped or benched in accordance with the applicable regulations.

Suitability of the In-Situ Soils for Use as Compacted Fill

The suitability of each soil stratum for use as compacted fill is discussed below.

Stratum 1 Topsoil — Topsoil is not suitable for use as compacted fill. During construction, it may be stockpiled on site for later use in the landscaped areas or removed from the site.

Stratum 2 Existing Fill — The existing fill that was encountered at the site generally consists of brown coarse to fine Sand, little (to and) Silt, trace (to some) coarse to fine Gravel with occasional cobbles, boulders, topsoil, roots, and debris. Some of the existing fill may be suitable for use as compacted fill at the site

provided that it remains relatively dry for optimum compaction and that any debris (i.e. concrete, wood, etc.) and organic material (i.e. topsoil, roots, etc.) have been removed prior to its reuse.

Strata 3 & 4 Sandy Silt, Silty Sand, Sand, or Sandy Gravel

The virgin site soils that may be excavated during construction consist of layers of Sandy Silt, Silty Sand, Sand or Sandy Gravel with occasional cobbles and boulders. This material is generally suitable for use as compacted fill, provided that it remains relatively dry for optimum compaction. Large cobbles and boulders shall not be used as new structural fill in the proposed building areas or in utility trenches.

Stratum 5 Gneiss Bedrock

Excavated rock may also be used as fill material for the building and paved areas provided that the material conforms to the required gradation, is well-graded, and has been approved prior to use by Carlin-Simpson & Associates. All rock fill must be well blended with smaller rock fragments and/or soil. Open voids within the rock fill matrix must be avoided. Small boulders up to 24 inches in diameter may be placed in parking lot fills deeper than ten (10) feet below the finished pavement. Boulders must not be clustered and must be sufficiently surrounded with soil fill. We recommend that the boulders and excavated rock be processed by a crusher to provide suitable fill material for the building and pavement areas.

Rock fill shall be placed in 12-inch loose layers and compacted with multiple passes of a large vibratory roller to a firm and non-yielding state as determined by the on-site representative from Carlin-Simpson & Associates. Rock fill should not be used where it will interfere with the installation of foundations or utilities. Also, it shall not be used as backfill directly against concrete walls or utilities. Use of rock fill within the planned building and pavement areas shall be limited to the gradations limitations provided in Table 4 below.

Table 4 - Gradation Limitations for Rock Fill

Area	Location	Maximum Particle Size
Building Area	Within 4 feet of Finished Floor	3 inches
	More than 4 feet below Finished Floor	12 inches
Pavement Area	Within 4 feet of Finished Grade	6 inches
	More than 4 feet below Finished Grade	18 inches
	More than 10 feet below Finished Grade	24 inches

Proper moisture conditioning of the soil will be required. In the event that the on-site material is too wet at the time of placement and cannot be adequately compacted, the soil should be aerated and allowed to dry or the material removed and a drier cleaner fill material used. In the event that the on-site material is too dry at the time of placement and cannot be adequately compacted, water may be needed to increase the soil moisture content for proper compaction.

The in-situ soils which exist throughout the site may become soft and weave if exposed to excessive moisture and construction traffic. The instability will occur quickly when exposed to these elements and it will be difficult to stabilize the subgrade. We recommend that adequate site drainage be implemented early in the construction schedule and if the subgrade becomes wet, the Contractor should limit construction activity until the soil has dried.

GENERAL

The findings, conclusions and recommendations presented in this report represent our professional opinions concerning subsurface conditions at the site. The opinions presented are relative to the dates of our site work and should not be relied on to represent conditions at later dates or at locations not explored. The opinions included herein are based on information provided to us, the data obtained at specific locations during the study and our past experience. If additional information becomes available that might impact our geotechnical opinions, it will be necessary for Carlin-Simpson & Associates to review the information, reassess the potential concerns, and re-evaluate our conclusions and recommendations. Additional subsurface exploration may be required.

Regardless of the thoroughness of a geotechnical exploration, there is the possibility that conditions between borings and test pits will differ from those encountered at specific boring or test pit locations, that conditions are not as anticipated by the designers and/or the contractors, or that either natural events or the construction process have altered the subsurface conditions. These variations are an inherent risk associated with subsurface conditions in this region and the approximate methods used to obtain the data. These variations may not be apparent until construction.

The professional opinions presented in this geotechnical report are not final. Field observations and foundation installation monitoring by the geotechnical engineer, as well as soil density testing and other quality assurance functions associated with site earthwork and foundation construction, are an extension of this report. Therefore, Carlin-Simpson & Associates should be retained by the Owner to observe all earthwork and foundation construction, to document that the conditions anticipated in this study actually exist, and to finalize or amend our conclusions and recommendations Carlin-Simpson & Associates is not responsible or liable for the conclusions and recommendations presented in this report if Carlin-Simpson & Associates does not perform these observation and testing services.

Therefore, in order to preserve continuity in this project, the Owner must retain the services of Carlin-Simpson & Associates to provide full time geotechnical related monitoring and testing during construction. At a minimum, this shall include the observation and testing of the following: 1) the removal of existing fill and unsuitable soil, where required; 2) the proofrolling of the subgrade soil prior to the placement of new compacted fill; 3) the placement and compaction of controlled fill; 4) the excavation for the building foundations; 5) the preparation of the subgrade for the floor slabs and pavement areas; and 6) the construction of the proposed retaining walls.

This report has been prepared in accordance with generally accepted geotechnical engineering practice. No other warranty is expressed or implied. The evaluations and

recommendations presented in this report are based on the available project information, as well as on the results of the exploration. Carlin-Simpson & Associates should be given the opportunity to review the final drawings and site plans for this project to determine if changes to the recommendations outlined in this report are needed. Should the nature of the project change, these recommendations should be re-evaluated.

This report is provided for the exclusive use of Brynwood Partners, LLC and the project specific design team and may not be used or relied upon in connection with other projects or by other third parties. Carlin-Simpson & Associates disclaims liability for any such third party use or reliance without express written permission. Use of this report or the findings, conclusions or recommendations by others will be at the sole risk of the user. Carlin-Simpson & Associates is not responsible or liable for the interpretation by others of the data in this report, nor their conclusions, recommendations or opinions.

If the conditions encountered during construction vary significantly from those stated in this report, this office should be notified immediately so that additional recommendations can be made.

Thank you for allowing us to assist you with this project. Should you have any questions or comments, please contact this office.

Very truly yours,

CARLIN-SIMPSON & ASSOCIATES

M. Anke

GENERAL NOTES:

1. GENERAL LAYOUT WAS OBTAINED FROM A DRAWING PREPARED BY JOHN MEYER CONSULTING, PC ENTITLED "TEST PIT PLAN, BRYNWOOD CLUB, BEDFORD ROAD (NY 22), TOWN OF NORTH CASTLE NEW YORK," DRAWING TP-1, DATED DECEMBER 17, 2012.
2. BORING, TEST PIT, PERMEABILITY TEST, AND PERCOLATION TEST LOCATIONS WERE LAID OUT IN THE FIELD BY CARLIN-SIMPSON & ASSOCIATES (CSA).
3. BORINGS (B-1 THROUGH B-11) WERE PERFORMED BY GENERAL BORINGS INC. ON 18 & 19 DECEMBER 2012 UNDER THE FULL TIME INSPECTION OF CSA.
4. THE BOREHOLE PERMEABILITY TEST (BP-4) WAS PERFORMED BY CSA ON 18 & 19 DECEMBER 2012.
5. PERCOLATION TESTS (P-1, P-2, AND P-3) WERE PERFORMED BY CSA ON 3 JANUARY 2013.
6. TEST PITS (TP-1 THROUGH TP-18) WERE PERFORMED BY TRAFICANTE CONTRACTING, INC ON 3 & 4 JANUARY 2013 UNDER THE FULL TIME INSPECTION OF CSA.
7. TEST PITS (TP-19 THROUGH TP-28) WERE PERFORMED BY BRYNWOOD CLUB PERSONNEL IN SEPTEMBER 2013 UNDER THE FULL TIME INSPECTION OF CSA.
8. LOCATIONS ARE APPROXIMATE.

LEGEND:

- BORING LOCATION (DEC. 2012)

TECHNICAL BROCHURE
B3887BF R2

WS_BF Series

Model 3887BF

SUBMERSIBLE SEWAGE PUMP

BUILT IN THE USA
ENGINEERED, ASSEMBLED & TESTED

GOULDS WATER TECHNOLOGY
a xylem brand

FEATURES

Impeller: Cast iron, semi-open, non-clog, dynamically balanced with pump out vanes for mechanical seal protection.

Casing: Cast iron flanged volute type for maximum efficiency. Designed for easy installation on A10-20 slide rail or base elbow rail systems.

Mechanical Seal: SILICON CARBIDE VS. SILICON CARBIDE sealing faces for superior abrasive resistance, stainless steel metal parts, BUNA-N elastomers.

Shaft: Corrosion-resistant, 300 series stainless steel. Threaded design. Locknut on all models to guard against component damage on accidental reverse rotation.

Fasteners: 300 series stainless steel.

Capable of running dry without damage to components.

Designed for continuous operation when fully submerged.

EXTENDED WARRANTY AVAILABLE FOR RESIDENTIAL APPLICATIONS.

AGENCY LISTINGS

Tested to UL 778 and CSA 22.2 108 Standards
By Canadian Standards Association
File #LR38549

APPLICATIONS

Specifically designed for the following uses:

- Homes
- Water transfer
- Sewage systems
- Light industrial
- Dewatering/Effluent
- Commercial applications

Anywhere waste or drainage must be disposed of quickly, quietly and efficiently.

SPECIFICATIONS

Pump

- Solids handling capabilities: 2" maximum
- Capacities: up to 185 GPM
- Total heads: up to 38 feet TDH
- Discharge size: 2" NPT threaded companion flange as standard. 3" option available but must be ordered separately. (Order no. A1-3)
- Temperature: 104°F (40°C) continuous
  140°F (60°C) intermittent.

MOTORS

- Fully submerged in high grade turbine oil for lubrication and efficient heat transfer. All ratings are within the working limits of the motor.
- Class B insulation

Single phase (60 Hz):

- Capacitor start motors for maximum starting torque.
- Built-in overload with automatic reset.
- SJTOW or STOW severe duty oil and water resistant power cords.
- ⅓ – 1 HP models have NEMA three prong grounding plugs.

Three phase (60 Hz):

- Class 10 overload protection must be provided in separately ordered starter unit.
- STOW power cords all have bare lead cord ends.

- **Bearings:** Upper and lower heavy duty ball bearing construction.
- **Designed for Continuous Operation:** Pump ratings are within the motor manufacturer's recommended working limits, can be operated continuously without damage when fully submerged.
- **Power Cable:** Severe duty rated, oil and water resistant. Epoxy seal on motor end provides secondary moisture barrier in case of outer jacket damage and to prevent oil wicking. Standard cord is 20'. Optional lengths are available.
- **Motor Cover O-ring:** Assures positive sealing against contaminants and oil leakage.

TECHNICAL BROCHURE
B3887BF R2

WS_BF Series

Model 3887BF

SUBMERSIBLE SEWAGE PUMP

BUILT IN THE USA
ENGINEERED, ASSEMBLED & TESTED

GOULDS WATER TECHNOLOGY
a xylem brand

FEATURES

Impeller: Cast iron, semi-open, non-clog, dynamically balanced with pump out vanes for mechanical seal protection.

Casing: Cast iron flanged volute type for maximum efficiency. Designed for easy installation on A10-20 slide rail or base elbow rail systems.

Mechanical Seal: SILICON CARBIDE VS. SILICON CARBIDE sealing faces for superior abrasive resistance, stainless steel metal parts, BUNA-N elastomers.

Shaft: Corrosion-resistant, 300 series stainless steel. Threaded design. Locknut on all models to guard against component damage on accidental reverse rotation.

Fasteners: 300 series stainless steel.

Capable of running dry without damage to components.

Designed for continuous operation when fully submerged.

EXTENDED WARRANTY AVAILABLE FOR RESIDENTIAL APPLICATIONS.

AGENCY LISTINGS

Tested to UL 778 and CSA 22.2 108 Standards
By Canadian Standards Association
File #LR38549

APPLICATIONS

Specifically designed for the following uses:

- Homes
- Water transfer
- Sewage systems
- Light industrial
- Dewatering/Effluent
- Commercial applications

Anywhere waste or drainage must be disposed of quickly, quietly and efficiently.

SPECIFICATIONS

Pump

- Solids handling capabilities: 2" maximum
- Capacities: up to 185 GPM
- Total heads: up to 38 feet TDH
- Discharge size: 2" NPT threaded companion flange as standard. 3" option available but must be ordered separately. (Order no. A1-3)
- Temperature: 104°F (40°C) continuous
  140°F (60°C) intermittent.

MOTORS

- Fully submerged in high grade turbine oil for lubrication and efficient heat transfer. All ratings are within the working limits of the motor.
- Class B insulation

Single phase (60 Hz):

- Capacitor start motors for maximum starting torque.
- Built-in overload with automatic reset.
- SJTOW or STOW severe duty oil and water resistant power cords.
- ⅓ – 1 HP models have NEMA three prong grounding plugs.

Three phase (60 Hz):

- Class 10 overload protection must be provided in separately ordered starter unit.
- STOW power cords all have bare lead cord ends.

- **Bearings:** Upper and lower heavy duty ball bearing construction.
- **Designed for Continuous Operation:** Pump ratings are within the motor manufacturer's recommended working limits, can be operated continuously without damage when fully submerged.
- **Power Cable:** Severe duty rated, oil and water resistant. Epoxy seal on motor end provides secondary moisture barrier in case of outer jacket damage and to prevent oil wicking. Standard cord is 20'. Optional lengths are available.
- **Motor Cover O-ring:** Assures positive sealing against contaminants and oil leakage.

APPENDIX C

MANUFACTURER'S PROCESS CALCULATIONS

PES Project #	BJB-022522-SC(Rev5)	Date:	4/7/22
Job Name:	Summit Club		
QTY & Flow			

BESST DESIGN CALCULATIONS

1) **B_x** Actual Sludge Load [kg BOD_5 / kg VSS / d]

$$B_x = B \times 1.02^{(tmin-20)}$$
$$B_x = 0.120 \times 1.02^{(10-20)}$$
$$B_x = 0.0984 \text{ kg } BOD_5 \text{ / kg VSS / d}$$

2) **A** Sludge Age [days]

$$A = (1 / (YB_x)) \times (1-0.5((YB_x) / k_{ac})) + (Sqrt(1 + ((YB_x) / 2k_{ac})^2))$$
$$A = (1/ (0.60 \times 0.0984)) \times (1- 0.5 \times((0.60 \times 0.0984) / 0.090))+ (Sqrt (1 + (0.60 \times 0.0984) / (2 \times 0.090)^2))$$
$$A = 29.1936 \text{ days}$$

3) **k_d** Actual Rate of Decay [d^{-1}]

$$k_d = k_{ac} / (1 + Ak_{ac})$$
$$k_d = 0.090 / (1+ (29.1936) (0.090))$$
$$k_d = 0.0248 \text{ } d^{-1}$$

4) **X** Sludge Concentration [kg ss / m^3]

$$X = 1000 \times V_x / KI$$
$$X = 1000 \times 0.600) / 100$$
$$X = 6.0000 \text{ kg ss / } m^3$$

PES Project #	BJB-022522-SC(Rev5)	Date:	4/7/22
Job Name:	Summit Club		
QTY & Flow	0		

BESST DESIGN CALCULATIONS, Cont'd.

5) $\mathbf{X_v}$ Volatile Suspended Solids Concentration [kg VSS / m^3]

$\mathbf{X_v}$ = (X)(p)
$\mathbf{X_v}$ = 6.0000 x 0.65
$\mathbf{X_v}$ = 3.9000 kg VSS / m^3

6) **v** Actual Hydraulic Loading [m / h]

v = Lesser of v_l or v_c, where v_l = 1
$\mathbf{v_c}$ = $(N_x / X) \times e^{0.03(tmin-20)}$
$\mathbf{v_c}$ = (6.0000 / 6.0000) ($e^{0.03 * (10 - 20)}$)
$\mathbf{v_c}$ = 0.7408 m / h

7) $\mathbf{V_B}$ Aeration Volume [m^3]

$\mathbf{S_R}$ = S_T - (0.966(p)(NL))
$\mathbf{V_B}$ = $(Q(S_O - S_R)) / X_v B_x$
$\mathbf{V_B}$ = ((170.326)(0.2400 - 0.0037) / (3.900)(0.0984)
$\mathbf{V_B}$ = 104.82 m^3

8) $\mathbf{S_S}$ Clarifier Surface Area [m^2]

$\mathbf{S_S}$ = $((Q_Q)(Q) / 24v$
$\mathbf{S_S}$ = ((3)(170.326)/ (24 * 0.7408)
$\mathbf{S_S}$ = 28.739 m^2

9) $\mathbf{V_S}$ Clarifier Volume [m^3]

$\mathbf{V_S}$ = S_S / SV
$\mathbf{V_S}$ = 28.739 / 0.63
$\mathbf{V_S}$ = 45.618 m^3

PES Project #	BJB-022522-SC(Rev5)	Date:	4/7/22
Job Name:	Summit Club		
QTY & Flow	0		

BESST DESIGN CALCULATIONS, Cont'd.

10) $\mathbf{P_X}$ Net Mass of Volatile Suspended Solids Produced [kg VSS / d]

$\mathbf{P_X} = (Y / (1 + Ak_d))(Q)(S_O - S_R)$
$\mathbf{P_X} = (0.60 / (1 + (29.1936) (0.0248))(170.33)(0.2400 - 0.0037)$
$\mathbf{P_X} = 14.004$ kg VSS / d

11) $\mathbf{P_t}$ Sludge Production [kg ss / d]

$\mathbf{P_t} = P_X / p$
$\mathbf{P_t} = 14.004 / 0.6500$
$\mathbf{P_t} = 21.544$ kg ss / d

12) $\mathbf{V_N}$ Nitrification Volume [m^3]

$\mathbf{V_N} = (Q(N_O - N)) / (p_N m_U X_V)$
$\mathbf{V_N} = (170.326 (0.0400 - 0.0010)) / ((0.0450)(0.6085)(3.9000))$
$\mathbf{V_N} = 62.149$ m^3

13) $\mathbf{V_D}$ Denitrification Volume [m^3]

$\mathbf{V_D} = (QN_OY) / (0.75 m_Z X_V)$
$\mathbf{V_D} = (170.33 ((0.0400)(0.60))) / (0.75 (0.0750)(3.9000))$
$\mathbf{V_D} = 18.634$ m^3

14) $\mathbf{V_A}$ Volume of Aeration [m^3]

$\mathbf{V_A}$ = Larger of V_{AB} or V_N
$\mathbf{V_{AB}} = V_B - V_D((1 + Ak_d) / (2.77(Am_Z)))$
$\mathbf{V_{AB}} = 104.82 - 18.634 ((1 + (29.1936)(0.0248)) /$
$(2.77 (29.1936)(0.0750))$
$\mathbf{V_{AB}} = 99.526$
$\mathbf{V_A} = 99.526$ m^3

PES Project #	BJB-022522-SC(Rev5)	Date:	4/7/22
Job Name:	Summit Club		
QTY & Flow	0		

BESST DESIGN CALCULATIONS, Cont'd.

15) **V_T** Total Volume of Reactor [m^3]

$$\mathbf{V_T} = V_A + V_D + V_S$$
$$\mathbf{V_T} = 99.526 + 18.634 + 45.618$$
$$\mathbf{V_T} = 163.78 \ m^3$$

16) **O_2** Oxygen Consumption [kg O_2 / d]

$$\mathbf{O_2} = Q((S_O - S_R) / 0.68) - 1.42P_X + 4.57Q(N_O - N)$$
$$\mathbf{O_2} = 170.33 \ ((0.2400 - 0.0037) / 0.68) - 1.42 (14.004) + 4.57 (170.33) (0.0400 - 0.0010)$$
$$\mathbf{O_2} = 69.655 \ kg\ O_2 / d$$

17) **Nm** Air Consumption [Nm^3 / h]

$$\mathbf{Nm} = O_2(c_S / (c_S - 2))(o_k / (0.024a))$$
$$\mathbf{Nm} = 69.655 (8.1224 / (8.1224 - 2)) (1.3000 / (0.024 (30)))$$
$$\mathbf{Nm} = 166.85 \ Nm^3 / h$$

BESST PROGRAM AND FORMULA LISTING

The following variable and formula lists represent the program listing for the computer model used to design and size the BESST system. Not all of the formulas are listed due to copyright and patent protection. Formulas that are NOT shown are mainly sub-formulas of those listed. For formula verification see Metcalf & Eddy: Wastewater Engineering; and K.R. Imhoff: Taschenbuch def Stadtenwasterung. 28. Auflage, Oldenbo Munchen - Wien 1993.

INPUT VALUES

1.)	**B**	**Sludge Load (kg BOD / kg VSS)**		**0.03 to 0.20**
2.)	**N_X**	**Flux Flow (kg ds / m^2 / h)** function of temperature (use @ 20 degrees Celsius)		**6.00**
3.)	**V_L**	**Limit Hydraulic Loading (m / h)**		**0.99 to 1.1**
4.)	**V_X**	**Sludge Volume (mL / L)**		**4.0 to 0.7**
5.)	**KI**	**Sludge Index (mL / g)**		**70 to 120**
6.)	**p**	**Volatile Suspended Solids (%)**		**0.62 to 0.68**
7.)	**Y**	**Maximum Yield Coefficient (kg VSS / kg BOD)**		**0.53 to 0.6**
8.)	**k_{ac}**	**Decay Rate (d)** constant		**0.09**
9.)	**Q**	**Flow Rate (m^3 / d)**		
10.)	**Q_Q**	**Flow Variation**		**1.5 to 3**
11.)	**S_O**	**Influent BOD (kg / m^3)**		
12.)	**S_T**	**Effluent BOD (kg / m^3)**		
13.)	**N_O**	**Influent Ammonia (kg / m^3)**		
14.)	**N**	**Effluent Ammonia (kg / m^3)**	typically	**0.005**

INPUT VALUES

15.)	**N_3**	**Effluent Nitrates N-NO_3 (kg / m^3)**	typically	**0.001 to 0.015**
16.)	**NL_O**	**Influent TSS (kg / m^3)**		
17.)	**NL**	**Effluent TSS (kg / m^3**		
18.)	**min**	**Minimum Water Temperature (^oC)**		
19.)	**max**	**Maximum Water Temperature (^oC)**		
20.)	**a**	**Oxygen Transfer Coefficient (g / Nm^3)**		**15 to 50**
21.)	**SV**	**Ratio, Separation Surface to Separation Volume**		
22.)	**m_i**	**Specific Growth Rate of Nitrificants**	constant	**1.37**
23.)	**pH**	**pH**		**6.0 to 8.0**
24.)	**m_{id}**	**Specific Growth Rate of Denitrificants**	constant	**0.1 to 0.3**
25.)	**O_k**	**Peak Load of Aeration**	constant	**1.3**

Nitrification and Denitrification

Nitrogen is removed by the nitrification and denitrification processes. Nitrification is autotropic and all Purestream *ES*, LLC integrated bioreactors are designed for complete nitrification of ammonia to NO_3 (pleas see Metcalf & Eddy, Third Edition, Chapter 11-6).

Denitrification, however, is heterotropic and requires a carbon source. Conventional plants' "separate sludge denitrification" requires that carbon is added, typically in the form of methanol. This adds to operating costs, and if used in excess, to increased BOD_5 content. BESST technology's "single-sludge denitrification" approach uses an endogenous carbon source to maintain dentrifiers. Influent is combined with nitrified mixe liquor in the anoxic compartment providing the carbon source needed for denitrification. Relatively high mixe liquor recycle rates are employed and sufficient denitrification retention times provided.

Total nitrogen reduction ($\mathbf{N_T}$) is a subject of not only providing sufficient anoxic volume for denitrification and keeping temperature above a certain minimum, but also a function of Recycled Activated Sludge (RAS) flow rate. The efficiency of $\mathbf{N_T}$ reduction is expressed as follows:

$$\eta = (1 - 1/(1 + n)) \times 100$$

Where n = RAS flow multiple of average flow Q.

The following are typical efficiencies and RAS flow multiples used / required:

	n	η (%)
Domestic	2	66
	3	75
	4	80
Slaughterhouse Wastewater	14	93
Hog Manure	29	97

Phosphorous Reduction

BESST technology delivers not only high efficiency reduction of organic matter, but also increased efficiency of phosphorous removal. Two processes, biological and chemical precipitation are employed with advantage

The mechanics of biological phosphorous removal, known as "Luxury Uptake", are due to exposure of activated sludge to alternating oxic and anoxic conditions. Under these conditions, the cells store more energy in the form of phosphorous than needed for their survival. If strictly oxic conditions are maintained during subsequent clarification, phosphorous will be retained by the cells and will eventually be removed with the excess sludge. Unlike most other methods of clarification, these conditions are maintained by the BESS process, and biological phosphorous reduction to less than 3 mg/L are readily achievable.

The basic reaction involved in the precipitation of phosphorous with iron is as follows:

$$Fe^{+3} + H_n(PO_4)^{n-3} \blacklozenge \quad FePO_4 + nH^+$$

In the case of iron, 1 mole will precipitate 1 mole of phosphate. The advantage of the process is its low chemical consumption, close to stoichiometric, and consequently, the reduction of ballast sludge production. Followed by microfiltration, reductions to 0.5 mg/L are possible.

If yet further reduction of phosphorous is required, ferric sulfate precipitation after the bioreactor followed by microfiltration must be used.

Project: Summit Club 45,000 gpd

SLUDGE AIRLIFT CALCULATIONS AND DATA

A. Maximum flow at six times average daily flow

$\frac{45{,}000 \times 6}{1440}$ = 188 GPM total

B. Two (2) 4" airlifts provided, each rated at 94 GPM

C. See performance curve attached for 4" airlift

At Lift (H_L) = 1'
Flow = 94 GPM
Submergence (H_S) = 9'

% Subm. = $\frac{9}{10}$ x 100 = 90%
Required Air = 12 CFM per airlift

At Lift (H_L) = 2'
Flow = 94 GPM
Submergence (H_S) = 9'

% Subm. = $\frac{9}{11}$ x 100 = 81.8%
Required Air = 18 CFM per airlift

At actual lift (H_L) = 1.5', use 15 CFM per sludge airlift

D. Minimum flow at four times average daily flow

$\frac{45{,}000 \times 4}{1440}$ = 125 GPM total

E. Two (2) 4" airlifts provided, each rated at 63 GPM

F. See performance curve attached for 4" airlift

At Lift (H_L) = 1'
Flow = 63 GPM
Submergence (H_S) = 9'

% Subm. = $\frac{9}{10}$ x 100 = 90%
Required Air = 10 CFM per airlift

At Lift (H_L) = 2'
Flow = 63 GPM
Submergence (H_S) = 9'

% Subm. = $\frac{9}{11}$ x 100 = 81.8%
Required Air = 16 CFM per airlift

At actual lift (H_L) = 1.5', use 13 CFM per sludge airlift

February 28, 2022
Project: Summit Club 45,000 gpd

SKIMMER AIRLIFT CALCULATIONS AND DATA

A. Maximum flow at two times average daily flow

$$\frac{45{,}000 \times 2}{1440} = 63 \text{ GPM total}$$

B. Two (2) 2.5" airlifts provided, each rated at 32 GPM

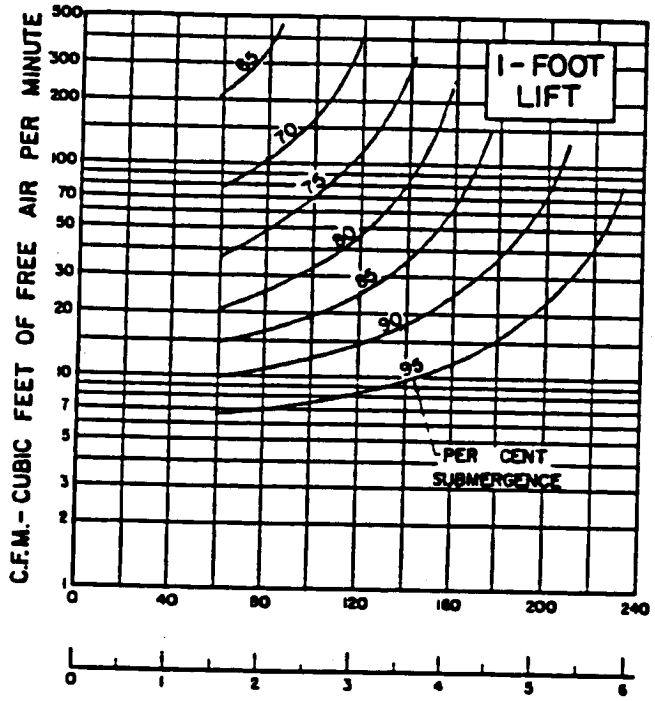
C. See performance curve attached for 2.5" airlift

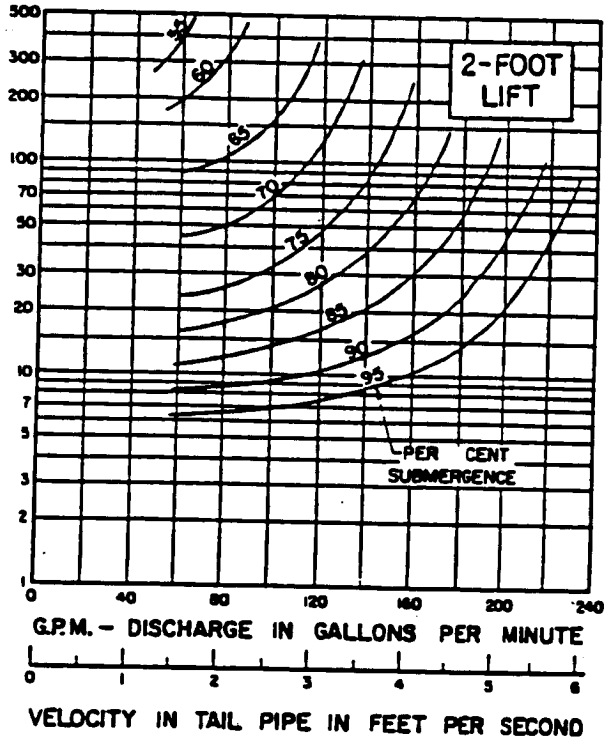
At Lift (H_L) = 1'	At Lift (H_L) = 2'
Flow = 32 GPM	Flow = 32 GPM
Submergence (H_S) = 5'	Submergence (H_S) = 5'
% Subm. = $\frac{5}{6} \times 100 = 83.3\%$	% Subm. = $\frac{5}{7} \times 100 = 71.4\%$
Required Air = 3 CFM per airlift	Required Air = 7 CFM

At actual lift (H_L) = 1.5', use 5 CFM per sludge airlift

WasteWater Treatment Systems

TYPICAL PERFORMANCE CURVES FOR A 4-INCH AIR LIFT





NOTES:

1. THE AIR LIFT PERFORMANCE CURVES ON THIS CHART ARE TYPICAL FOR PUMPING CLEAR WATER AND ARE INTENDED TO BE USED FOR ESTIMATING.
2. THE PER CENT SUBMERGENCE = $\frac{H_S}{H_S + H_L} \times 100$.
3. IT IS SUGGESTED THAT THE CURVES BE NOT EXTENDED BEYOND THE LIMITS SHOWN BECAUSE THE APPROXIMATE MAXIMUM DISCHARGE FOR EACH CONDITION IS INDICATED.
4. FOR LIFTS BETWEEN THOSE INDICATED ON THIS CHART USE A STRAIGHT ARITHMETIC PROPORTION WHEN INTERPOLATING VALUES.

EXAMPLE 1:

GIVEN: LIFT, $H_L = 5'$; SUBM., $H_S = 13'$.
DESIRED DISCH. = 100 G.P.M.

FIND: PER CENT SUBMERGENCE = $\frac{13}{13+5} \times 100 = 72$
AIR REQ'D. = 24 C.F.M. (FREE AIR)
VELOCITY IN 4" TAIL PIPE = 2.6 F.P.S.

EXAMPLE 2:

GIVEN: LIFT, $H_L = 5.5'$; SUBM., $H_S = 12.5'$.
DESIRED VEL. IN 4" TAIL PIPE = 3.0 F.P.S.

FIND: DISCH. FROM 4" AIR LIFT = 117 G.P.M.
PER CENT SUBM. = $\frac{12.5}{12.5+5.5} \times 100 = 69.3$.
AIR REQ'D.
= (AIR @ H = 5') $- \frac{5.5-5.0}{7.0-5.0}$ (DIFF. AIR @ H = 5' & 7'.
= $40 - 0.25(40 - 30)$
= 38 C.F.M. (FREE AIR).

engineering data sheet

Chicago PUMP

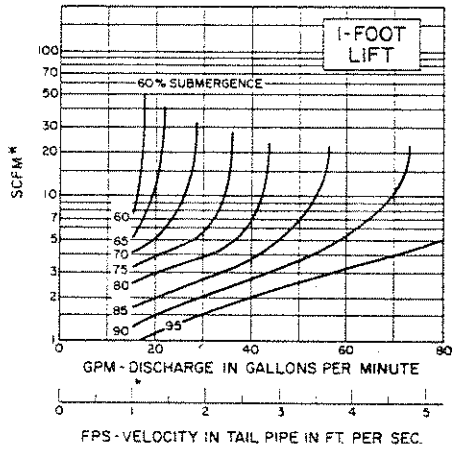
section 8630.4

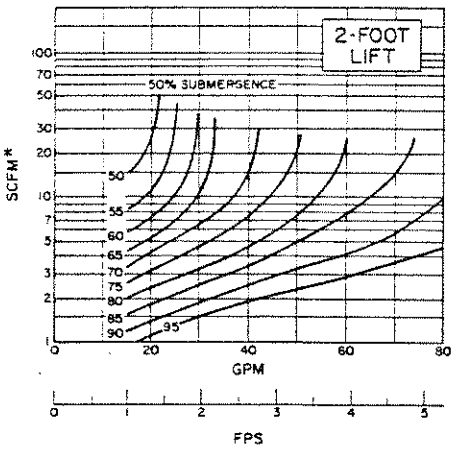
JAN., 1972 K-6291-2.5

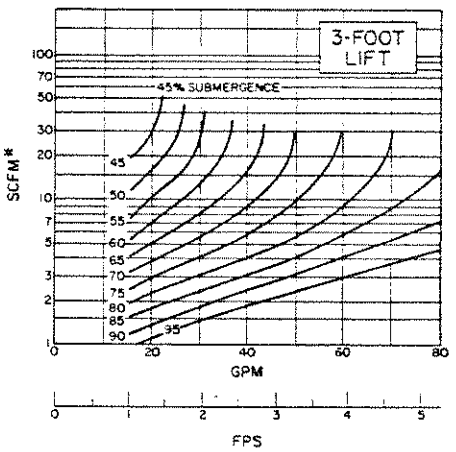
AIR LIFT PUMP

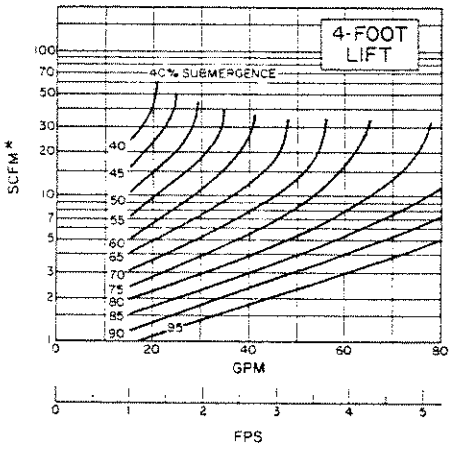
$2\frac{1}{2}$" SIZE

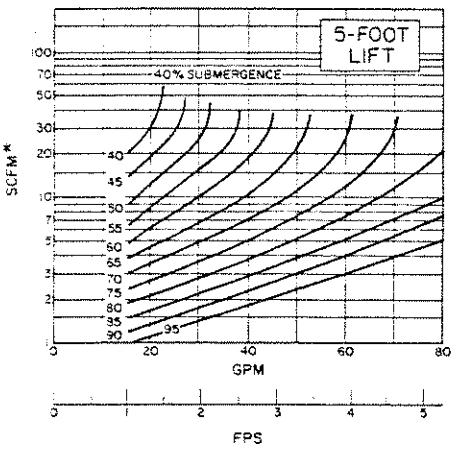
TYPICAL PERFORMANCE CURVES

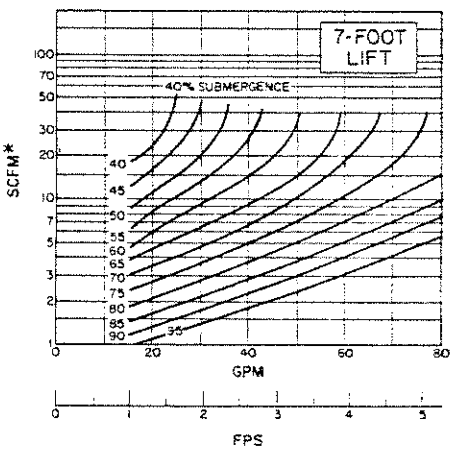


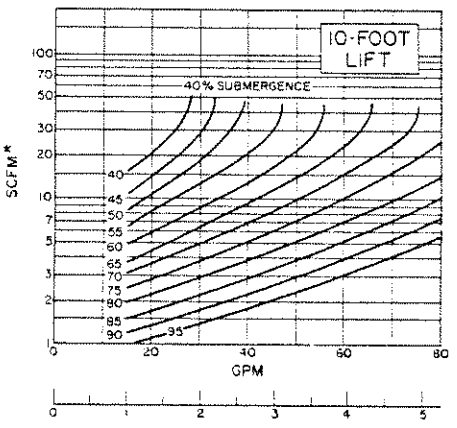












NOTES:

1. THE AIR LIFT PERFORMANCE CURVES ON THIS CHART ARE TYPICAL FOR PUMPING CLEAR WATER AND ARE INTENDED TO BE USED FOR ESTIMATING.
2. THE PER CENT SUBMERGENCE = $\frac{H_S}{H_S + H_L} \times 100$
3. IT IS SUGGESTED THAT THE CURVES NOT BE EXTENDED BEYOND THE LIMITS SHOWN BECAUSE THE APPROXIMATE MAXIMUM DISCHARGE FOR EACH CONDITION IS INDICATED.
4. FOR LIFTS BETWEEN THOSE INDICATED ON THIS CHART USE A STRAIGHT ARITHMETIC PROPORTION WHEN INTERPOLATING VALUES.

EXAMPLE:

GIVEN: LIFT, $H_L = 3'$, SUBM, $H_S = 12'$
DESIRED DISCH. = 40 GPM

FIND: PER CENT SUBMERGENCE = $\frac{12'}{12' + 3'} \times 100 = 80\%$

AIR REQ'D = 4 SCFM
VELOCITY IN $2\frac{1}{2}$" TAIL PIPE = 2.6 FPS

* STANDARD CUBIC FEET OF AIR PER MINUTE AT 14.7 PSIA AND 70° F.

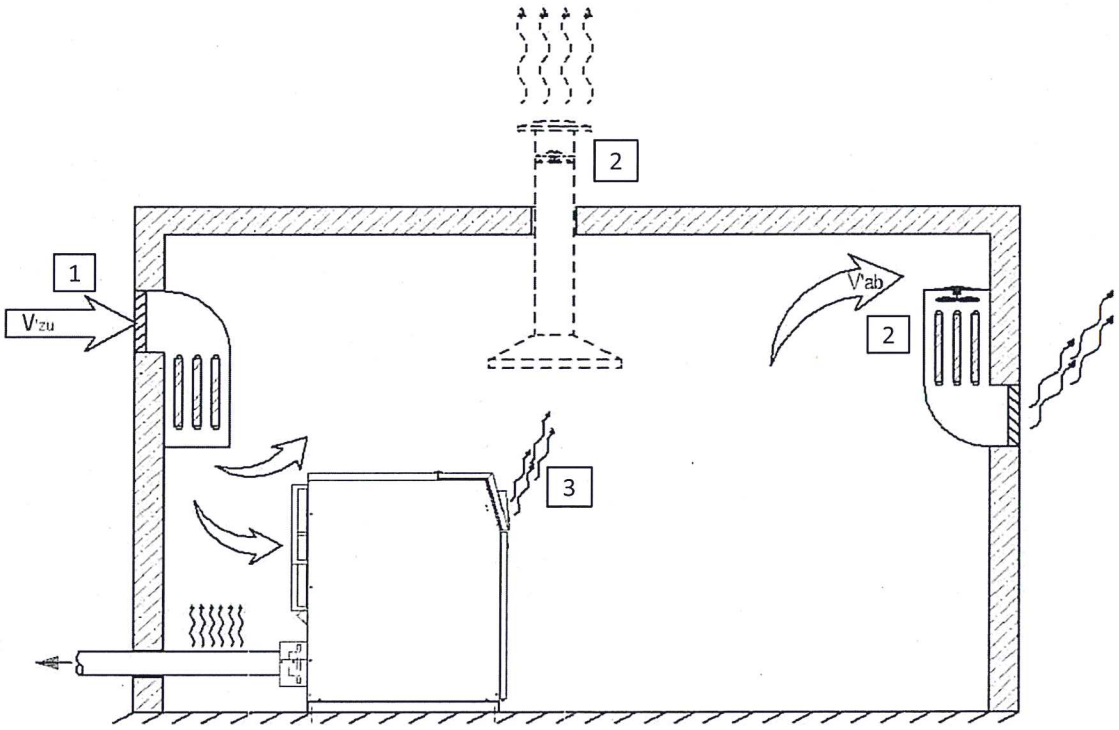
Safety Devices

Discharge Temperature Gauge with Switch	Motor Winding PTC's
Range: 120 - 400°F (50 - 200°C) **Switching point:** adjustable **Switching:** 1 = common, 2 = NC, 4 = NO **Contacts:** 5A / 24VDC non-inductive NC 2 NO 4 1 Common Blower discharge temperature switch should be wired into control system to shut down blower operation when switch point is achieved.	 Motor winding PTC's require use of a control module. Kaeser part number 7.2710.2 can be purchased and integrated into control scheme for this purpose.

BB52C

Ventilation of Blower Room		
Air Inlet Opening	1	1.0 sq. ft
Cooling Fan Capacity (forced ventilation)	2	500 CFM
Max Heat Rejection	3	4,700 BTU / HR

Ventilation values based on 190 CFM @ 15 PSIG ΔP, 20Hp and ambient inlet. Max. room temp. = 104°F and cooling air temp = 95°F. Discharge piping length = 5 ft.



It is recommended to extract the exhaust air from the upper third of the room as this is where the heat collects. The room ventilation openings should be arranged that the current of cooling air flowing through the room passes over the blower inlet and exhaust ports and, if possible, should leave no stagnant air in the room. (A thermal short circuit must be avoided, i.e. discharged cooling air must not find its way to the cooling air inlet.)
The blower must not be positioned so near to a wall that the inflow of cooling air is obstructed.

Pipework should be insulated against heat emission.

If the blower station is located in the middle of a large hall its exhaust air can be extracted by means of a duct positioned above the exhaust port (illustrated in broken lines).

	460	11.5				Y -> Δ	20 AMP	14 AWG	Δ	20 AMP	12 AWG

Notes:
1. Disconnect fuses should be of dual element time delay design.
2. Breaker should be suitable for a heavy duty starting load and of inverse time delay design that complies to regulations outlined in NEC 430.52
3. Fuse and wire sizes determined in accordance to NEC 240.6, 430.52 and tables 250.122, 430.248, 430.250, 430.252.

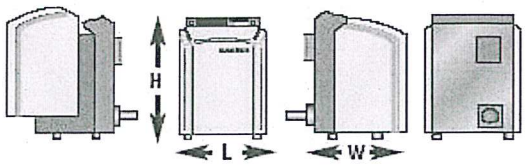
Enclosure Fan Data

Power	Voltage (60Hz)	Phase (60Hz)	Current Draw	Jumper Connection	Quantity	Enclosure Type	Fan Type	Flow
110W	115	1	3.42	Capacitor	1	TEFC	Radial	280 CFM
80W	230	1	0.60	Capacitor	1	TEFC	Radial	280 CFM
80W	208	3	0.61	Δ	1	TEFC	Radial	280 CFM
120W	230	3	0.68	Δ	1	TEFC	Radial	280 CFM
120W	460	3	0.37	Y	1	TEFC	Radial	280 CFM
120W	575	3	0.28	Y	1	TEFC	Radial	280 CFM

Notes:
1.) Nominal power in Watts.
2.) Current in A (+/- 10%).
3.) Default fan selection is 230/460V. If other voltage is required, it must be noted at time of order.
4.) Fan requires separate power supply.
5.) Fan should run at the same time as main motor. If fan is able to run for 15 minutes after machine is turned off, it will improve thermal conditions inside enclosure.

BB52C

Oil System Data	
Drive End Capacity	0.15 quarts
Gear End Capacity	0.13 quarts
Oil Type (Synthetic)	SB 220



Package Connections

Hp	Cable Entry: Drive Motor	Cable Entry: Fan Motor	Length (in.) L	Width (in.) W	Height (in.) H	Floor (sq ft)	Weight (lb)	Connection Size (in.)	Type
3	3 x 1" NPT	2 × M16	31 1/2	28 3/8	44	6 1/5	382	2	Tube

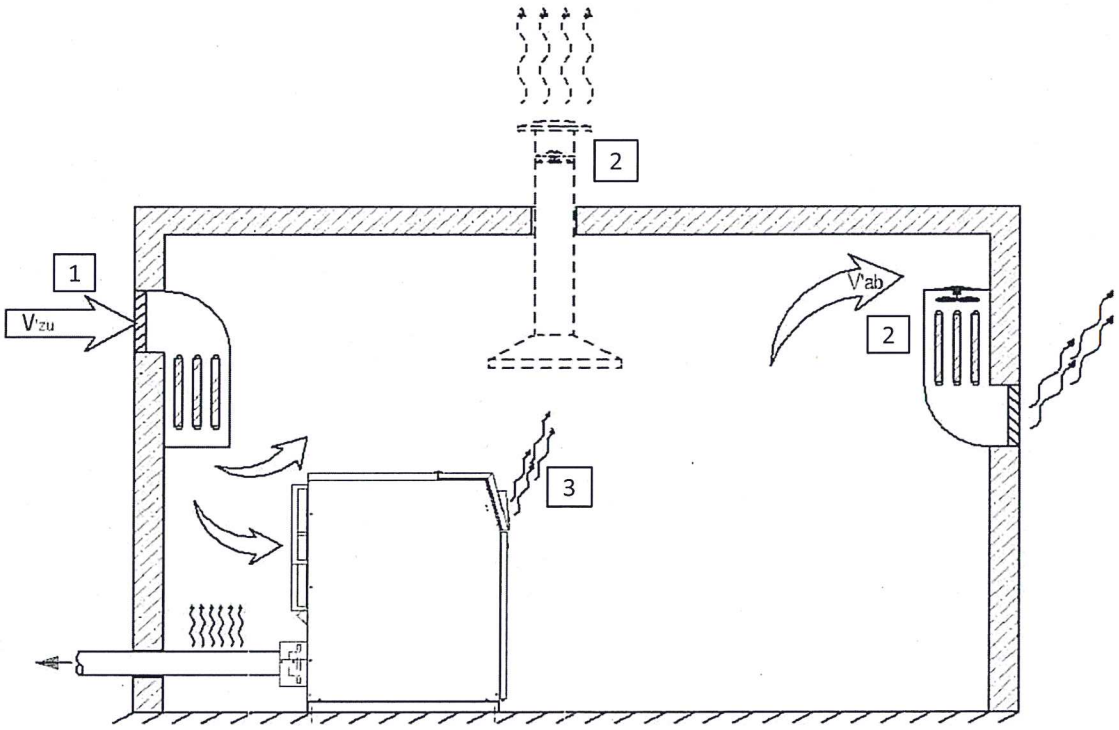
Safety Devices

Discharge Temperature Gauge with Switch	Motor Winding PTC's
Range: 120 - 400°F (50 - 200°C) **Switching point:** adjustable **Switching:** 1 = common, 2 = NC, 4 = NO **Contacts:** 5A / 24VDC non-inductive NC 2 NO 4 1 Common Blower discharge temperature switch should be wired into control system to shut down blower operation when switch point is achieved.	 Motor winding PTC's require use of a control module. Kaeser part number 7.2710.2 can be purchased and integrated into control scheme for this purpose.

BB52C

Ventilation of Blower Room		
Air Inlet Opening	1	1.0 sq. ft
Cooling Fan Capacity (forced ventilation)	2	500 CFM
Max Heat Rejection	3	4,700 BTU / HR

Ventilation values based on 190 CFM @ 15 PSIG ΔP, 20Hp and ambient inlet. Max. room temp. = 104°F and cooling air temp = 95°F. Discharge piping length = 5 ft.



It is recommended to extract the exhaust air from the upper third of the room as this is where the heat collects. The room ventilation openings should be arranged that the current of cooling air flowing through the room passes over the blower inlet and exhaust ports and, if possible, should leave no stagnant air in the room. (A thermal short circuit must be avoided, i.e. discharged cooling air must not find its way to the cooling air inlet.)
The blower must not be positioned so near to a wall that the inflow of cooling air is obstructed.

Pipework should be insulated against heat emission.

If the blower station is located in the middle of a large hall its exhaust air can be extracted by means of a duct positioned above the exhaust port (illustrated in broken lines).

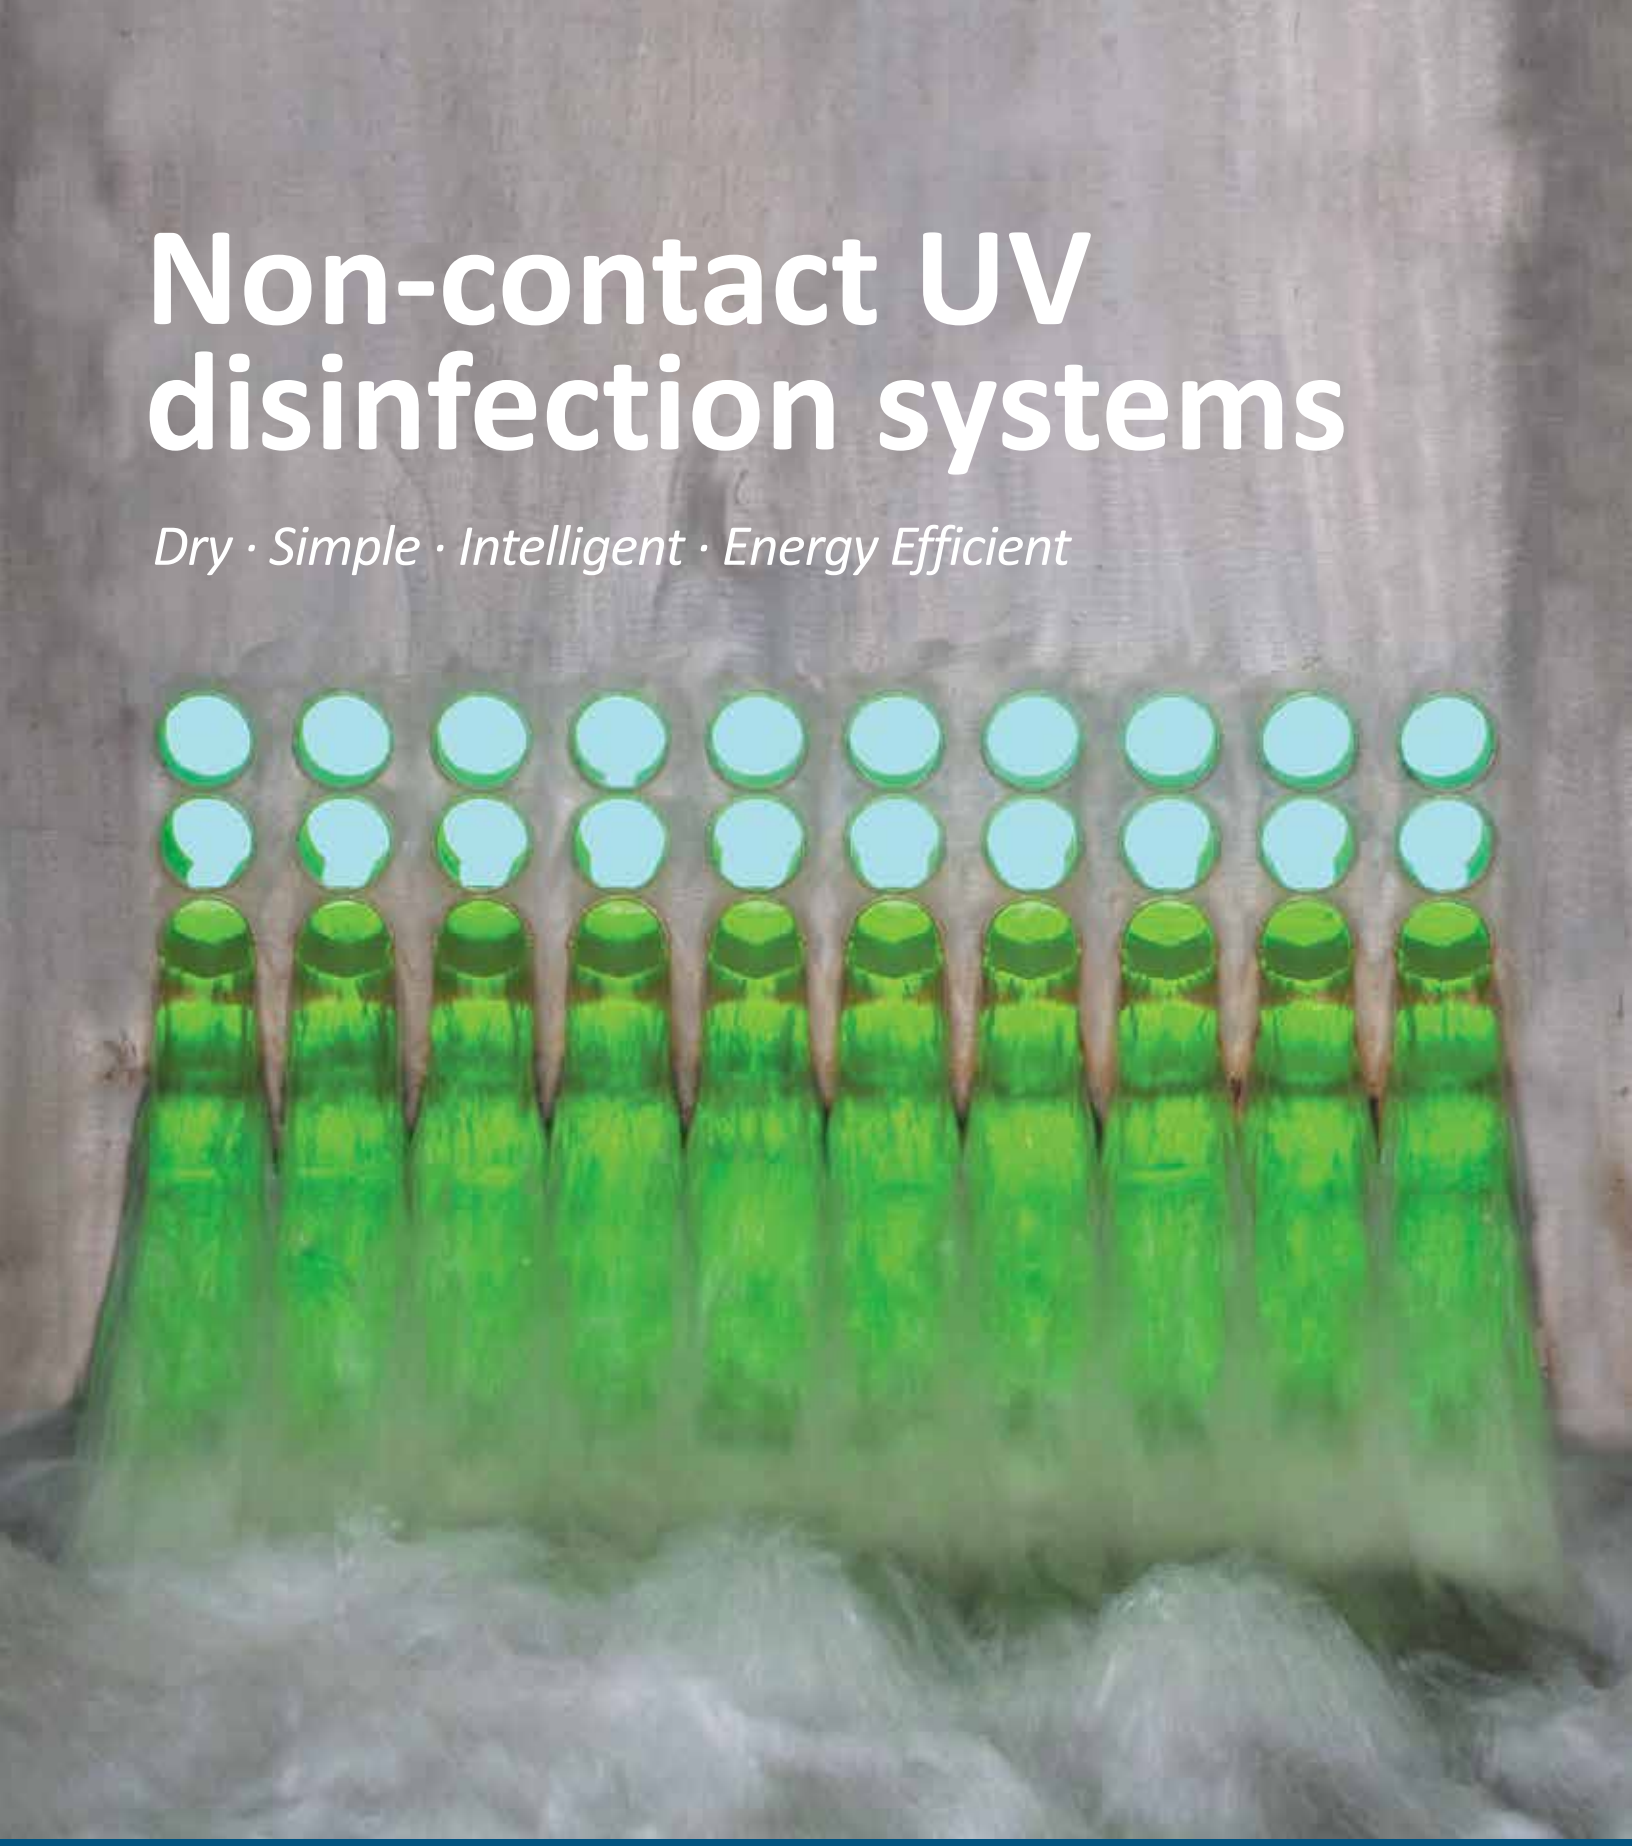
APPENDIX E

DISINFECTION EQUIPMENT CUTS

Non-contact UV disinfection systems

Dry · Simple · Intelligent · Energy Efficient



ENAQUA™
A GRUNDFOS COMPANY

Designed and manufactured in USA

The right choice

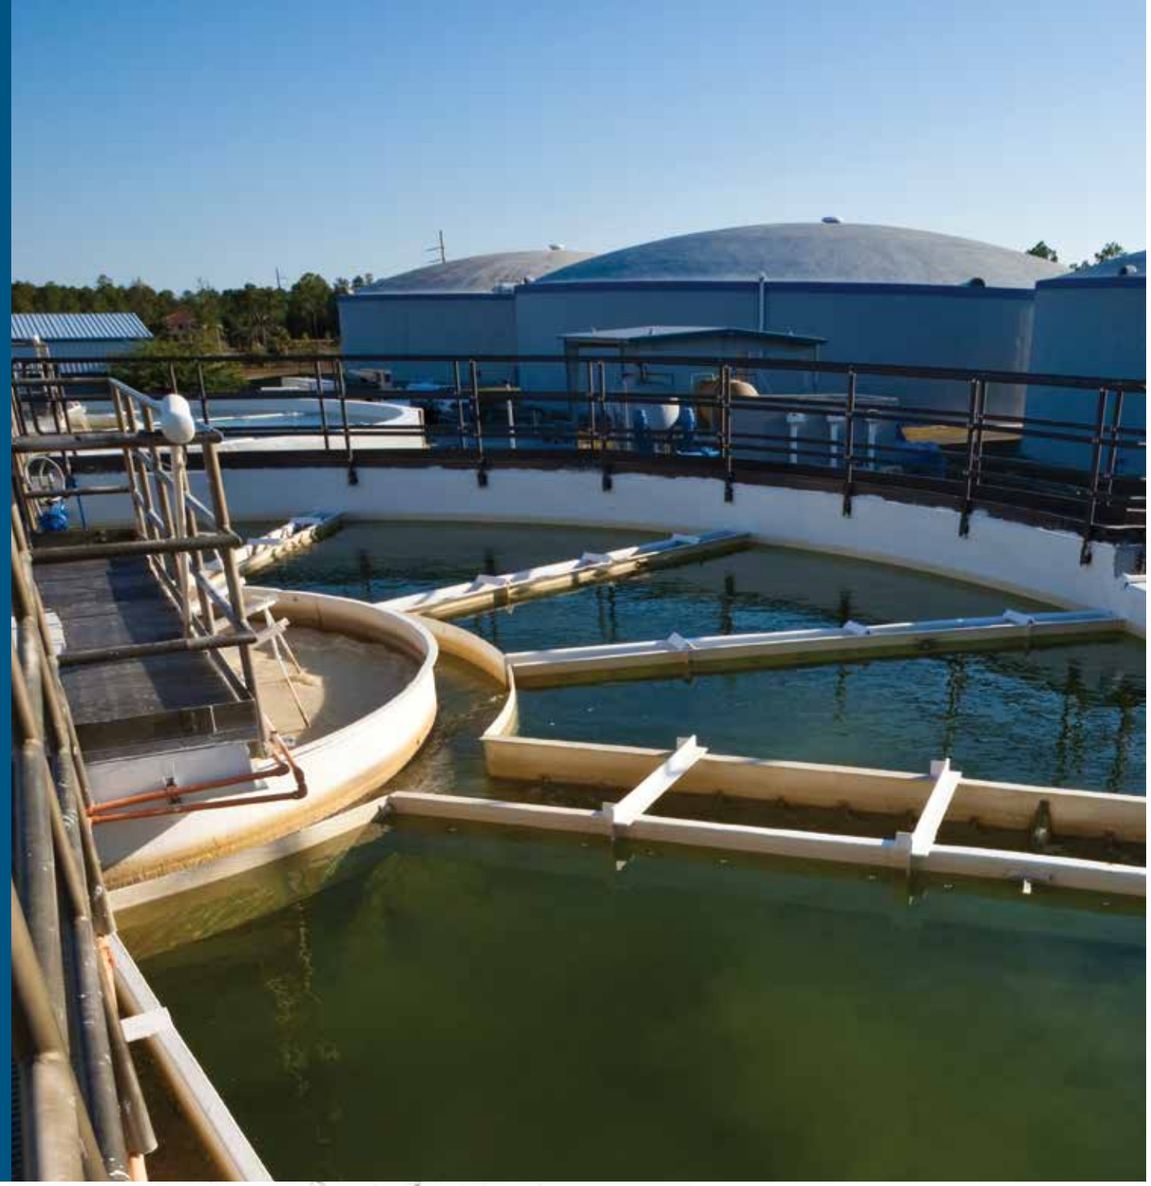
UV is the most cost effective and environmental friendly disinfection solution for wastewater.

About UV Disinfection

Ultraviolet light irradiation is a proven disinfection process using short wave length 254nm Ultraviolet (UV) energy to inactivate harmful microorganisms. UV radiation disrupts the DNA of pathogenic organisms such as bacteria, viruses and molds, leaving them unable to reproduce. UV has been used to disinfect various types of effluent from low-quality combined sewer overflow (CSO) to high-quality tertiary effluent since early 1900's.

UV – The preferred disinfection method in municipal wastewater

To comply federal Clean Water Act, and other regulations for indicator organisms, municipal wastewater must be disinfected before discharging or reusing. There are multiple options for chemical disinfection, but only one non-chemical disinfection technology. UV is the preferred disinfection method for municipal wastewater discharge or water reuse applications various chemical disinfection technologies. Currently more than 20% of wastewater treatment plants in the United States use UV as their preferred disinfection technology and this percentage has been increasing year over year.



Enaqua – a history of innovation

**Cryptosporidium and Giardia are resistant against chlorination*

Third party validated technology, approved for CA Title 22 Recycled Water.

Enaqua is the first non-contact UV system supplier to have applied and received Third Party Validation, as a result of continuous efforts improving the Non-Contact UV disinfection technology. The validation testing and reports were conducted in 2015 by Carollo Engineers in accordance with the following protocols:

1. UV - Disinfection Guidelines for Drinking Water and Water Reuse (National Water Research Institute [NWRI]), August 2012
   - 53% to 80.0 % UVT range validated*
2. Uniform Protocol for Wastewater UV Validation Applications (International Ultraviolet Association [IUVA], 2011) – 36.0% to 81.0% UVT validated range*
   - MS2 Bacteriophage
   - T1 Coliphage

carollo

Validation Test Certification

**Please contact Enaqua for validation range, parameters, and other technical details.*

UV made simple – features at a glance

All of Enaqua's Non-Contact UV disinfection systems are built out of standard modules with high customization flexibility. The UV reactors are offered for both In-pipe or In-Channel configurations with variable plug & play inlets and outlets (page 10).

The systems are very easy to install as they are prefabricated and self-contained.

1 SMART Lamps
Cost efficient non-amalgam SMART lamp (page 9)

AFP™ Tubes
Fouling resistant virtually self-maintaining (page 6)

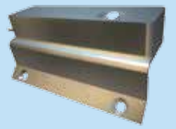
2 Ensure Dosing System (EDS)
Intelligent monitoring, control and FAIL SAFE ensures compliance at all times (page 8)

3 Electrical panel
Simple, compact and operator friendly HMI

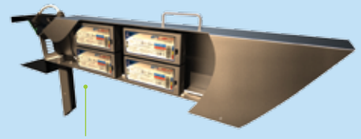
4 Flow & Level pacing
Optimize energy consumption & life of consumables

5 Heat Exchange System
Controls reactor temperature for optimal UVC output using Effluent, plant W3 water, Potable, or Closed Loop system

6 UV Intensity Monitor
UV Sensor placed outside of AFP™ tubes – Dry without fouling



7 Individually fused and switched lamp racks
No cranes required, simple maintenance (page 7)



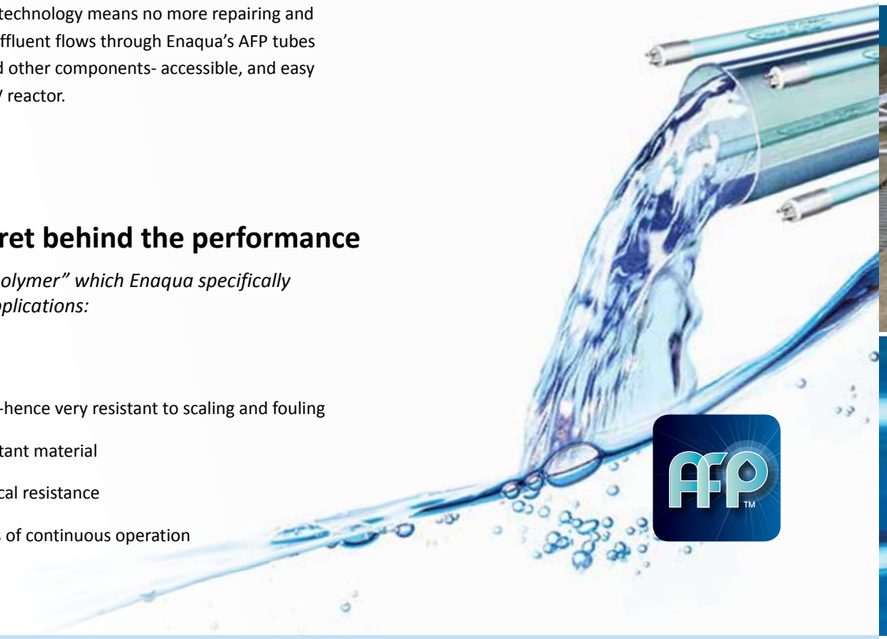
Single lamp ballast
Non-prorated Warranty up to 24 on/off cycles per day

8 Controlled Water Level Downstream
No level control mechanism required – simple hydraulic design

Always dry – AFP™ Non-Contact UV Technology

Enaqua – The Pioneer in cost effective Non-Contact UV design

Enaqua's innovative non-contact UV technology means no more repairing and replacing submerged components. Effluent flows through Enaqua's AFP tubes leaving the UV lamps, electronics and other components- accessible, and easy to maintain in the dry body of the UV reactor.



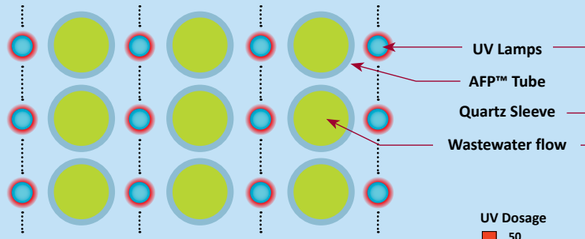
AFP™ tubes – The secret behind the performance

AFP stands for "Activated Fluoropolymer" which Enaqua specifically developed for Non-Contact UV applications:

- High transmissivity of UVC
- AFP Tubes have no micro-structure-hence very resistant to scaling and fouling
- Durable, flexible, and fracture resistant material
- Long term UVC stability and Chemical resistance
- Multiple plants with over 20+ years of continuous operation

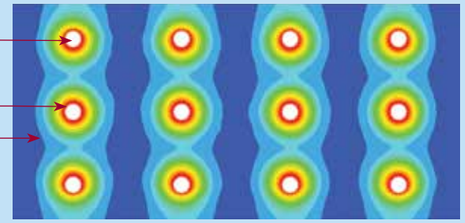
Technologies in comparison

ENAQUA AFP™
Non-Contact Technology



Low cost high output lamps
No quartz sleeves
Fouling and Scaling Resistant AFP tube
Turbulent flow provides self-cleaning of AFP™ tube
No AFP tube replacement needed under normal operating conditions
Simple pipe hydraulics makes UV disinfection easy to predict
Level Control Devices typically not required

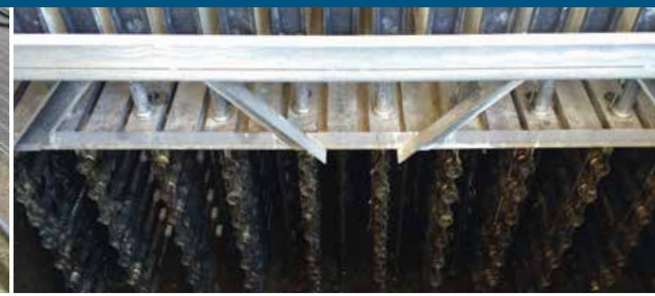
Quartz Sleeve UV
traditional Contact Technology

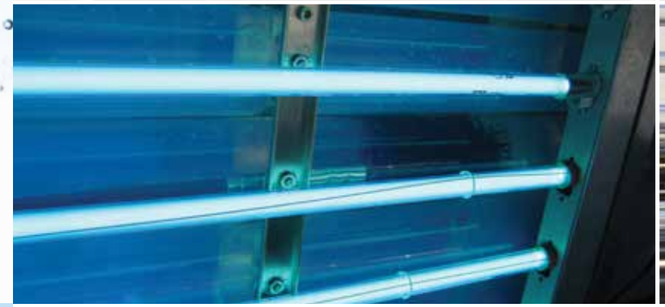


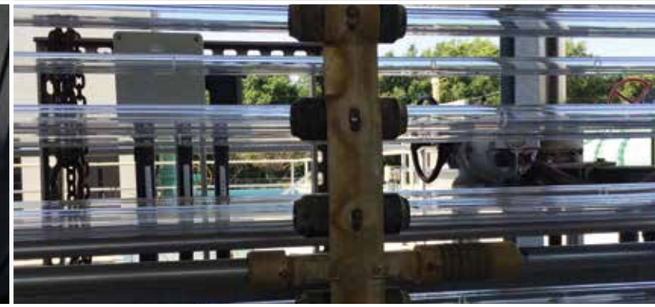
High cost amalgam lamps
Fragile quartz sleeves with risk of mercury and glass contamination
Fouling-prone quartz sleeves
Cleaning system required
Quartz sleeves need to be replaced over time
Channel hydraulics makes UV disinfection less predictable
Level control devices increase footprint

Simple – maintenance made clean, fast and easy

Enaqua's Non-Contact UV technology system maintenance is simple:

Enaqua's Non-Contact UV	Traditional Contact UV
		




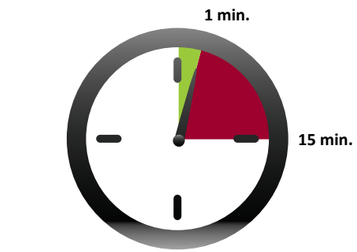


No more:

- High cost amalgam lamps
- Dirty and fouled quartz sleeves
- Problems with quartz cleaning devices
- Need to interrupt or remove any hydraulic seals
- Heavy duty cranes required for system maintenance
- Minimize Civil and Structural construction costs
- Time consuming lamp replacements
- Algae growth on the lamp racks
- Quartz sleeves to break and replace*
- SCADA programming

**No AFP™ tube replacement under normal conditions (20+ year history)*

Typical lamp replacement time



1 minute – Enaqua's Non-Contact UV

15 minutes – Traditional Contact UV

Intelligence – you don't want to miss...

Where Energy Efficiency matters

The Ensure Dosing System (EDS) is the most comprehensive monitoring and control system in the industry.

SCADA built in – Full system control and performance monitoring wherever and whenever you want:

- No special hardware and software requirements
- Simple connection via web browser
- Multiple Levels of Access
- Remote monitoring and control via Internet
- Stand-alone WiFi control e.g. with iPad®
- SCADA integration with ModBUS TCP/IP
- Remote troubleshooting
- Email and text notification

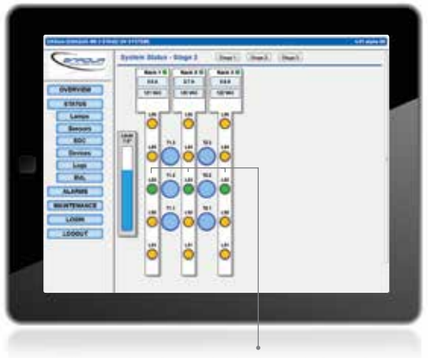
Fail Safe – Intuitive protection

Enaqua's FAIL SAFE intelligence ensures compliance at all times. In case a lamp in one stage fails, the system will command selected lamps in a redundant stage to power-on to compensate for any UV dosage reduction (see application example).

Stage 1

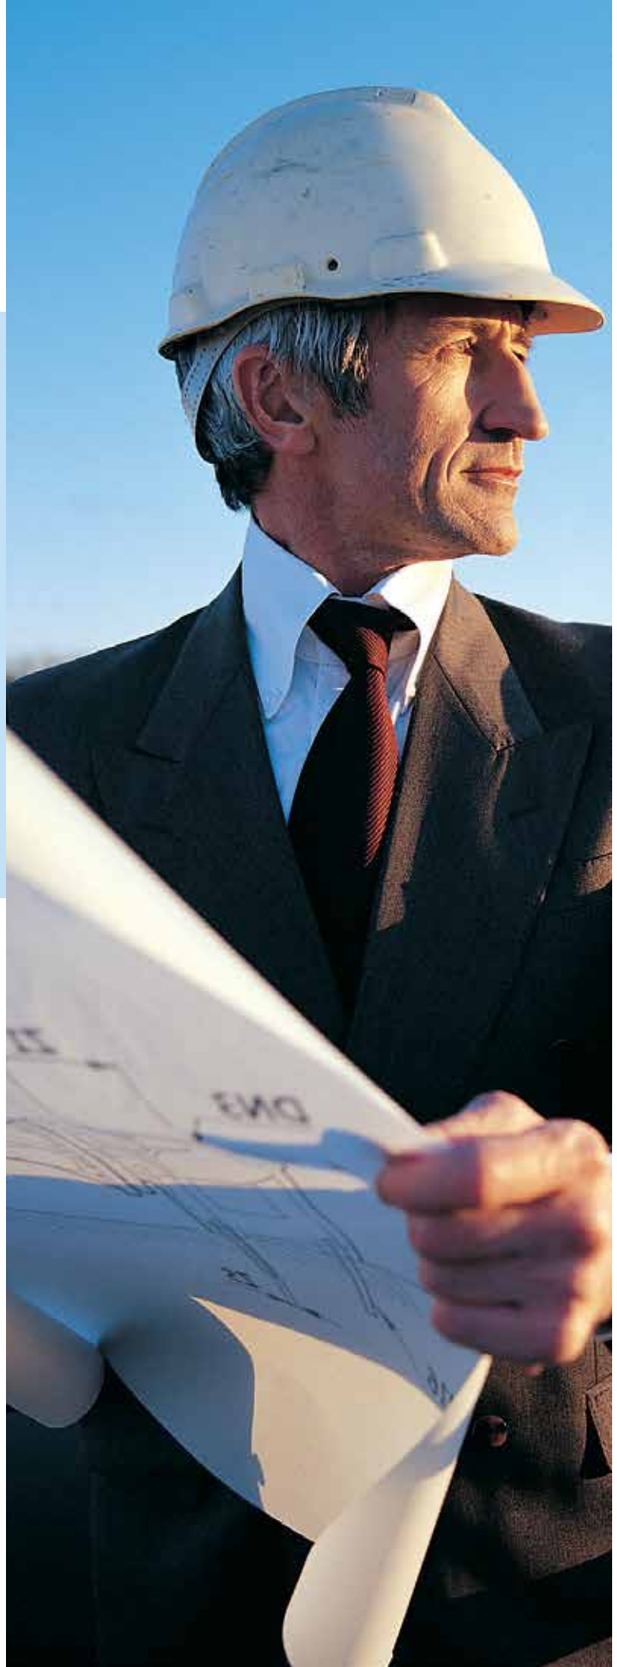
Lamp fault in stage 1: Alarm Alerts

Stage 2



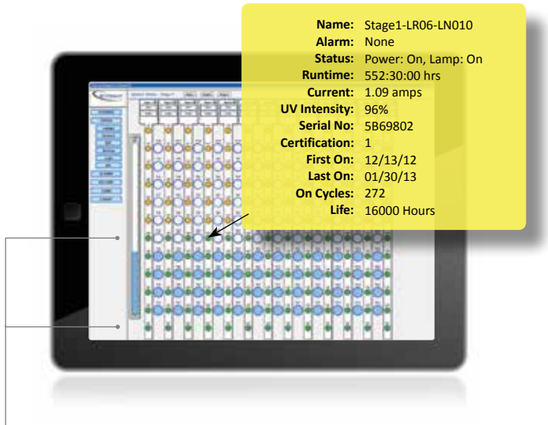
Automatically energizes ONLY selective lamps in Stage 2 to ensure disinfection while optimizing use of energy and consumables

Ipad® is a registered trademark of Apple



SMART Lamps – Advanced lamp control

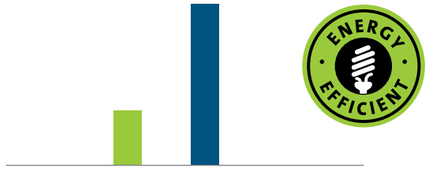
Enaqua's Low Pressure High Output (LPHO) lamps are equipped with a unique Smart Lamp Technology, a microchip integrated with the lamp connector identifies each UV lamp with a unique ID, monitors and logs lamp status, run time, lamp cycles, etc.



Flow & Level Pacing – Best energy efficiency

Enaqua's Flow & Level Pacing system automatically turns on only lamps which are required. This improves lamp and ballast life and reduces power consumption compared to systems that use "dimming".

Annual Energy Cost Comparison



$13,346
Enaqua EDS

$34,528
Traditional Dimming Systems

Actual comparison of bid guaranteed UV energy costs for Wastewater Plant, Peak 28MGD, Average 6MGD, $0.10/kWh.

M Series UV reactors

– compact uv reactors ideal for small treatment plants for surface discharge, reuse, and industrial applications.

M3 Series
Flow rates up to 80 gpm (18.2 m³/ h)

M4 Series
Flow rates up to 120 gpm (27.25 m³/ h)

M5 Series
Flow rates up to 360 gpm (81.8 m³/ h)

C1, C2, C3 & D1, D2, D3 UV series reactors

– medium size uv reactors for surface discharge, reuse, and industrial applications.

C1 & D1 Series
In pipe UV reactors , single or double banks- for Flow rates up to 2.0 MGD (315.4 m³/ h).

C2 & D2 Series
In pipe UV reactors, single or double banks- for Flow rates up to 4.2 MGD (662.5 m³/ h).

C3 & D3 Series
In pipe UV reactors, single or double banks- for Flow rates up to 6.0 MGD (946.4 m³/ h).

4 – 11 Series UV reactors

– large uv reactors offered "in-pipe" or " in-channel" configurations.

C Series "In pipe" or "In Channel"
Multi Bank UV reactors for Flow rates up to 24.0 + MGD . Applications– UV disinfection for surface discharge, Reuse, industrial appli-cation, Etc.

C Series "In Pipe " Reactor

C Series "In Channel" Reactor

D Series "In pipe" or "In Channel"
Multi Bank UV reactors for Flow rates up to 36 + MGD . Applications– UV disinfec-tion for surface discharge, CSO, Industrial Applications, Etc.

D Series "In Pipe " Reactor

D Series "In Channel" Reactor

E Series "In Channel"
Multi Bank UV reactors for Flow rates up to 100 + MGD . Applications– UV disinfection for surface discharge, CSO, Etc.

ADVERTISEMENT FOR BIDS

SUMMIT CLUB AT ARMONK
SEWAGE TREATMENT PLANT
TOWN OF NORTH CASTLE, NEW YORK

Sealed bids for the construction of the Summit Club at Armonk Sewage Treatment Plant will be received by Summit Club Partners, LLC at 568 Bedford Road, Armonk, New York 10504, Attention Jeff Mendell until 2:00 P.M. prevailing time on _____.

At the above specified time and place, bids will be opened. No bids will be read aloud.

The project will consist of one (1) overall Combined Contract consisting of General Construction, Plumbing, Heating and Ventilation, Mechanical and Electrical Work required to construct as a minimum, an influent concrete box, an equalization tank, a BESST sewage treatment plant (STP), consisting of BESST tank and equipment components, interconnecting piping, STP control building superstructure, electrical wiring, and an extension of the existing outfall line to discharge.

Copies of the Plans, Specifications and other Contract Documents may be examined at the office of Robinson & Muller Engineers, P.C. (R&M) at 50 Elm Street, Huntington, New York 11743, between the hours of 10:00 A.M. and 4:00 P.M. daily except Saturdays, Sundays and Holidays. One (1) copy of said documents may be obtained from R&M for a cost of One Hundred Dollars ($100.00) per set. Deposit checks shall be made payable to the order of Summit Club Partners LLC. No deposits will be refunded.

Bids must be made on the Standard Proposal Forms provided in the Bid Specification Book in the manner designated therein and must be enclosed in a sealed envelope, bearing the name and address of the bidder and name of the project on the outside; addressed to, Summit Club Partners LLC, c/o Jeff Mendell, at Summit Club Partners LLC at 568 Bedford Road, Armonk, New York 10504. Bids must be accompanied by a Certified Check or Bid Bond for ten percent (10%) of the amount bid, not to exceed $20,000.00.The Standard Proposal Forms are part of the Specifications Book which must be completed and submitted with the Bid.

The certified check shall be made payable to the order of Summit Club Partners LLC or a copy of a satisfactory Bid Bond, executed by the Bidder and an acceptable surety. Summit Club Partners LLC shall have the right in addition to retaining the amount of the Bid Security, to proceed against any bidder for any additional damages which may occur by reason of the Bidder's refusal or failure to enter into a Contract, if such Contract is offered.

The successful Bidder will be required to furnish and pay for a satisfactory 100% Performance and Payment Bonds.

In addition to any Bonds required to be delivered at the time of execution of any Contract, the successful Bidder shall also provide such other Certificates of Insurance and comply with such other requirements as may be contained in the Bid Specifications or Information for Bidders.

No part of the work under this Contract may be sublet without the written permission of Summit Club Partners LLC or the Engineer. The Contractor shall demonstrate to the Owner and the Engineer that he has the manpower, equipment and technical resources to complete all required work within the prescribed completion date.

Bidders must examine the Specifications and the site of the work and must satisfy themselves by such means as they prefer as to the actual conditions and requirements of the work.

Summit Club Partners LLC reserves the right to reject any or all Bids, to waive any informalities or to accept the Bid which, in its judgment, will be in the best interest of Summit Club Partners LLC.

Summit Club at Armonk
c/o Summit Club Partners LLC

BY: Jeff Mendell

INSTRUCTIONS TO BIDDERS

I. DEFINITIONS

A. Whenever the following terms or pronouns in place thereof are used in the Contract Documents, they shall be interpreted as follows:

"Owner"/"Agent".....	Summit Club Partners LLC
"Engineer"/"Consulting Engineer"	The firm of Robinson & Muller, Engineers, P.C. (R&M) at 50 Elm Street, New York Avenue, Huntington, New York 11743. The term "Engineer" shall also mean the technicians and assistants engaged by the Engineer to the extent of the particular duties entrusted to them.
"Attorney".....	The Attorney representing the Owner.
"Inspector".....	The person or persons employed by the Engineer to make inspections of the work performed and materials furnished by the Contractor.
"Bidder".....	Any individual, partnership, firm or corporation submitting a bona fide proposal to the Owner for the work contemplated.
"Contractor".....	The person or persons or partnership or corporation contracting to perform the Work to be done under the Contract Documents or the legal representative of such party or parties.
"Surety".....	The corporate body which is surety on the Contractor's bonds for the payment of all debts for materials and labor used or employed in the execution of the Contract and for the acceptable performance of the Work.
"Proposal"..... "Bid"	The form furnished by Owner properly filled in and executed and submitted as a bid for the performance of the Work.
"Project"..... "Work"	The entire work to be executed under the Contract.

"Plans"..... "Drawings"	The drawings or reproductions of drawings pertaining to the Work to be performed or to any structure connected therewith.
"Specifications".....	The descriptions, directions, provisions and requirements contained in the Contract Documents, together with all written agreements made or to be made pertaining to the method and manner of performing the Work, or to the quantities and qualities of materials to be furnished under the Contract.
"Addendum".....	Any written interpretation, clarification, amendment or addition to the Plans, Specifications, or other Contract Documents.
"Contract".....	The Contract covering the performance of the Work and the furnishing of materials required as evidenced by the Contract Documents.
"Regulatory Agency"	The New York State Department of Environmental Conservation, the Westchester County Department of Health, various Town agencies and Westchester Department of Public Works.
"Contract Documents".....	The Contract executed by the Owner and the Contractor, the Advertisement, Instructions to Bidders, Bid Forms, Contract, Bonds, General Conditions, Technical Specifications, all Addenda, the Plans, and all supplemental agreements made or to be made.
"State".....	The State in which the Project is located.

B. "As required", "as directed", "as permitted", "as ordered", "as designated", "as prescribed", or words of like import shall mean that the "requirement", "direction", "permission", "order", "designation", or "prescription" of the Engineer is understood and similarly the words "approved", "acceptable", "satisfactory", or words of like import shall mean approved by, or acceptable to, or satisfactory to the Engineer.

2. SUBMISSION OF BIDS

A. Submit Bids on the Bid Forms furnished. Properly fill in all blank spaces for bid prices, in indelible ink or typed, in both words and numerals. In case of conflict, words take precedence and shall be binding on the Bidder. Bid Proposal shall not be qualified, modified, limited or restricted in any way.

B. Enclose Bid Proposal in a sealed, opaque envelope plainly marked with the title of the Project and name and street address of the Bidder on the outside; post office boxes are not acceptable. When sent by mail, preferably registered, enclose the sealed Bid in an additional envelope similarly marked and addressed to Owner. No Bid will be considered unless filed on or before the time and at the place designated by the Owner. The Bids will be opened by the Owner or its representative but not be read aloud.

Bids received after the time fixed for the opening will not be considered and will be returned to Bidders unopened.

C. The Bidder shall furnish with the Bid Forms and Proposal the following completed and signed items:

1. An acknowledgement that all Addenda have been received.

2. A Bidding Contractor's Performance Record Statement – indicating among other requirements, records of similar work performed, including any work done on sewage and sewage related projects such as construction of sewage treatment plants, installation of sanitary sewers, sewage force mains and sewage pump stations similar to that included in this project, name of Owner, dollar amount of contract, description of the type of work, name of Engineer in charge, and address and phone number of Engineer.

3. Bid security – A certified check or Bid Bond.

4. Certificate of Surety (Performance Bond).

D. The information required under C1 or C2 above shall be furnished on the forms included in this book.

E. Before award is made to a Bidder who is not a resident of the State, Bidder shall designate a proper agent in the State on whom services of process can be made in the event of litigation.

3. INTERPRETATIONS AND/OR ADDENDA

A. No oral interpretation will be made to any Bidder as to the meaning of the Contract Documents or any part thereof. Every request for such an interpretation shall be made in writing to Engineer. To be given consideration all written inquiries must be received by Engineer five (5) or more days prior to the date set

for the receipt of Bids. Every interpretation made to a Bidder will be in the form of an Addendum to the Contract Documents. All Addenda will be mailed to each person holding Contract Documents, but it shall be the Bidder's responsibility to make inquiry as to the Addenda issued. All such Addenda shall become part of the Contract Documents and all Bidders shall be bound by such Addenda, whether or not received by the Bidders.

B. All Bidders are required to complete the "Acknowledgement of Receipt of Addenda" included in the Bid Forms.

C. The Bidder shall request clarification of all matters of confusion or conflict in the Contract Documents. Bid strategy should not be based on the Bidder's unilateral interpretation of the Contract Documents. No future claims arising out of the Bidder's interpretations as such will be considered.

4. EXAMINATION OF SITE AND CONTRACT DOCUMENTS

A. Each Bidder shall visit the site, walk or drive the route of the proposed Work and fully acquaint himself with the existing conditions and permit requirements there relating to the Work to be performed in order to be fully informed with respect to the facilities involved, the difficulties and the restrictions attending the performance of the Contract. The Bidder shall thoroughly examine and familiarize himself with the Contract Documents. The Contractor, by the execution of the Agreement, shall in no way be relieved of any obligation under it due to his failure to examine the Contract Documents or to visit the site and acquaint himself with the conditions there existing, and the Owner will be justified in rejecting any claim based on facts regarding which the Contractor should have been on notice as a result thereof.

5. MODIFICATION OF BIDS

A. Written or telegraphic modifications of Bids may be accepted if received in accordance with the requirements for the submission of Bids as provided above. Bidders are cautioned that if, in the opinion of Owner or Engineer, such modifications are not explicit, or are in any sense subject to misinterpretation, then the Bid so amended or modified will be subject to rejection.

6. WITHDRAWAL OF BIDS

A. Negligence on the part of the Bidder in preparing the Bid confers no right for the withdrawal of the Bid after it has been opened. Any Bidder upon properly notarized written request will be given permission to withdraw the Bid not later than the time set for opening. At the time of opening of the Bids, when such Bid is included, it will be returned to the Bidder unread.

7. STATEMENT OF BIDDER'S QUALIFICATIONS

A. Each Bidder shall complete the Contractor’s Certificate of Experience and Performance which is included herein. Owner shall have the right to take such

steps as it deems necessary to determine the ability of the Bidder to perform the obligations under the Contract, and the Bidder shall furnish Owner all such information and data for this purpose as the Owner may request. The right is reserved to reject any Bid where an investigation of the available evidence or information does not satisfy Owner that the Bidder is qualified to carry out properly the terms of the Contract. The issuing of Bid Documents and acceptance of a bid by Owner shall not be construed as prequalification of that Bidder.

B. Bidders shall be experienced in the kind of work to be performed, have the necessary equipment therefor, and sufficient capital to properly execute the Work within the time allowed. Bids received from bidders who have previously failed to complete contracts within the time required, or who have previously performed similar work in an unsatisfactory manner, may be rejected.

C. A bid may be rejected if the Bidder cannot demonstrate the necessary ability, personnel, plant and equipment, and financial resources to commence the Work at the time prescribed and thereafter to prosecute, timely progress and complete the Work within the time frames specified. A bid may be rejected if the Bidder is already obligated for the performance of other work which may delay the commencement, prosecution, or completion of the Work.

8. SUBCONTRACTORS

A. Upon request of the Owner, and within twenty-four (24) hours of such request, the bidder shall submit a list of subcontractors proposed for the performance of the Work. At the option of the Bidder, alternate subcontractors may be included in the list, provided that the use of such alternate subcontractors is approved by the Owner and shall not result in any change in the Contract Price stated on the Bid Form.

9. CONSIDERATION OF BIDS

A. The right is reserved, as the interest of the Owner may require, to reject any or all Bids, to waive any informality in Bids received, to reject any items of any Bid, to obtain new Bids, or to proceed to do the Work otherwise, when the best interest of the Owner may be promoted thereby.

10. ACCEPTANCE OF BID

A. The acceptance of a Bid will be a notice in writing signed by a duly authorized representative of the Owner and no other act of the Owner and/or Engineer shall constitute the acceptance of a Bid. The acceptance of a Bid shall bind the successful Bidder to execute the Agreement as provided hereinafter. The rights and obligations provided for in the Contract shall become effective and binding upon the parties only with its formal execution by the successful Bidder and Owner.

11. DETERMINATION OF THE LOW BID

A. The Owner may exercise the right to reject any or all Bids for any reason whatever or for no stated reason. The Owner may award the Contract to the lowest responsible Bidder on the basis of the Total Lump Sum Bid as stated in the Bid Form, who furnished adequate security therefor and complied with all requirements of the bidding requirements and these Instructions to Bidders, after investigations are made to determine the Bidder's responsibility and capability, and based upon the acceptability by the Owner of the list of subcontractors proposed for the Work by the Bidder.

12. INSURANCE

A. The General Conditions require the Contractor to maintain in force during the performance of the Work policies of Workmen's Compensation Insurance, Employers Liability Insurance and Bodily Injury Liability and Property Damage Insurance, and various other insurance, covering the operations of the Contractor and the use of all motor vehicles employed by the Contractor. Original policies, properly executed conformed copies, as well as Certificates of Insurance, evidencing the fact that the Contractor has procured the required insurance shall be filed with the Owner at the time of the execution of the Contract. Bidders are directed to examine the General Conditions for the details of the insurance requirements.

Subcontractors shall be bound by the same insurance requirements as the Contractor.

13. EXECUTION OF AGREEMENT (CONTRACT)

A. The Bidder whose Bid has been accepted will be required to appear at the place and at the time designated by the Owner, in person; or if a firm or corporation, a legally authorized representative shall so appear, and shall execute the Agreement as specified in the Bid Forms. The Owner may elect to mail the Agreement to the Bidder whose bid has been accepted.

B. In addition, the successful Bidder, within the period stipulated, shall procure, execute and deliver to the Owner and maintain, at his own cost and expense, the following bonds as required by the General Conditions:

Performance Bond - In an amount not less than 100% of the Contract Price.

Labor and Material Bond - In an amount not less than 100% of the Contract Price.

C. The Bonds shall stand as security for faithful performance of the Contract and for the payment of all persons performing labor on the Project under the Contract and furnishing materials in connection with the Contract. The bonds shall be in the form of the specimen bonds annexed hereto. The surety on the bonds shall be a corporate surety and shall meet the requirements stated under Bid Security hereof except that the amount of the bonds may exceed the limit for which the

United States Treasury Department has qualified the surety if the excess is reinsured with surety companies that are qualified on the United States Treasury Department list for an amount equal to the amount of the reinsurance. Written evidence of how any excess survey ship has been placed by the surety signing the bond shall accompany the bonds.

D. If the Contractor is a partnership, the bonds shall be signed by each of the individuals who are general partners; if a corporation, the bonds shall be signed in the correct corporate name by a duly authorized officer, agent or attorney-in-fact. There shall be executed an appropriate number of counterparts of the bonds corresponding to the number of counterparts of the Contract. Each executed bond shall be accompanied by:

1. Appropriate acknowledgements of the respective parties;

2. Appropriate duly certified copy of Power of Attorney or other certificate of authority where bond is executed by agent, officer, or other representative of Contractor or Surety; and

3. A duly certified extract from By-Laws or resolutions of Surety under which Power of Attorney or other certificate of authority of its agent, officer, or representative was issued.

E. Failure or refusal of the Bidder whose Bid is accepted to execute the Agreement as hereinbefore provided shall constitute a breach by such Bidder of the Agreement created by the acceptance of the Bid, and in such event, Owner at his option, may determine that such Bidder has abandoned the Contract. Thereupon, such Bidder's Bid and the acceptance thereof shall be null and void and Owner shall be entitled to take action to recover money damages. Such damages shall include the amount of the total Contract finally accepted in excess of that of the originally successful Bidder, losses arising from delays in Owner's construction program, and all other items of cost to Owner resulting from such breach. In the recovery of the damages specified above, Owner may proceed against the bidder or take such other action as Owner may deem best in the interest of the Owner.

14. ASSIGNMENT

A. The successful Bidder to whom the Contract shall be let, granted or awarded shall not assign, transfer, convey, sublet or otherwise dispose of the Contract or of Contractor’s right, title or interest therein or Contractor’s power to execute such Contract, to any person or corporation without the prior consent in writing of Owner.

15. SOIL CONDITIONS

A. The Bidder shall examine and investigate the nature, character, condition and behavior of the soil and subsoil, inasmuch as the Bidder who is awarded the Contract will be held wholly responsible therefor and must assume all risk in connection therewith. Where borings or other exploration data are shown on

plans or made available to the Bidder, it is understood that such data were obtained in the usual manner and with reasonable care and are to be interpreted and used as the bidders see fit. There is no expressed or implied agreement that all of the depths or character of the material have been precisely indicated, and the bidders are cautioned to take into account that conditions affecting the Work may differ from those indicated.

B. If the Bidder desires to obtain information as to soil conditions, at his own expense, he must first obtain permission from the Town and the Owner or other persons or corporations legally responsible for or holding title or control of the property to be tested before making borings or digging test pits on the site of the work. The Bidder is urged to conduct subsurface investigations, as necessary to support preparation of the bid.

C. Soil conditions information, if available, may be examined at the offices of the Engineer.

D. No representations of any kind made by anyone concerning the nature, character or conditions of the soil or sub-soil, test borings, test pits, or other exploration data made or compiled by the Owner or others shall be construed by the Bidder as indicative of the soil or sub-surface conditions which may be encountered, and the Owner or Engineer accepts no responsibility for such conditions. No claims emanating out of a difference in the conditions expected and encountered will be considered, honored or allowed.

16. CONTRACT TIME - LIQUIDATED DAMAGES

A. The number of days for the completion of the Work is set forth in the Bid Form and will be included in the executed Agreement. Provisions for liquidated damages are set forth in the Bid Form and the Agreement. All time limits stated in the Contract Documents are of the essence of the Agreement.

17. SALES AND USE TAX EXEMPTIONS

A. The Owner is not a tax exempt organization.

18. REGULATORY AGENCIES

A. The Bidder is made aware that all work is to be performed in compliance with all local, Town, County, State and Federal Agencies having jurisdiction over the work to be performed on this project. Specific attention is directed to the following agencies where compliance to permits or approvals are necessary:

1) New York State Department of Environmental Conservation
2) Westchester County Department of Health
3) Westchester County Department of Public Works
4) Various Town of North Castle Departments and Fire Marshall's office.

19. GUARANTEE

A. The Owner will require a one (1) year guarantee of all work performed by the contractor from the date of acceptance by the regulatory agencies, in addition to the standard guarantees of a minimum of one (1) year from all equipment manufacturers except in instances where the specifications require more than a one (1) year guarantee for equipment.

PROPOSAL GENERAL

SUMMIT CLUB AT ARMONK
SEWAGE TREATMENT PLANT
TOWN OF NORTH CASTLE, NEW YORK

TO: Summit Club Partners LLC
568 Bedford Road, Armonk, New York 10504
Attention: Jeff Mendell

To Whom It May Concern:

1. The undersigned hereby declares that he has carefully examined all Contract Documents including the Drawings for the Work, all Specifications and related documents including those incorporated by reference, and all Addenda thereto, and that he has personally inspected the site and has satisfied himself as to the nature and location of the Work, the general and local conditions, particularly those bearing upon transportation, disposal, handling and storage of materials, availability of labor, water, electric power, roads and uncertainties of weather, groundwater table or other physical conditions at the site, the conformation and condition of the ground, the character, quality and quantity of surface and subsurface materials to be encountered, the character of equipment and facilities needed prior to and during the execution of the Work and all other matters which can in any way affect the Work or the cost thereof, and understands that, in submitting this bid and signing the various bid proposal forms he waives all rights to plead any misunderstanding regarding the same.

2. The undersigned further understands and agrees to furnish and provide all the necessary material, machinery, plant, implements, tools, labor, services, skill and other items of whatever nature required, and to do and perform all the work necessary under the Contract, to complete the work in accordance with the Contract Documents and to accept in full compensation therefor the prices stated in the Price Schedule attached hereto.

3. In submitting this Bid, the undersigned further agrees:

   A. That Owner reserves for any reason whatever or for no stated reason, the right to reject this Bid, but that this Bid shall remain open and shall not be withdrawn for a period of ninety (90) days from the date the Bids are scheduled for submission.

   B. That if awarded the Contract, the Contractor will fully complete the Work by the date stated herein. Physical construction shall not commence until a Notice to Proceed is issued by the Owner or Engineer, and all conditions of the Notice to Proceed shall have been fully complied with.

4. By submission of this Bid, each Bidder certifies, and in the case of a joint Bid each party thereto certifies as to his own organization, that this Bid has been arrived at independently, without consultation, communication, or agreement as to any matter relating to this Bid with any other Bidder or with any competitor.

5. The Work proposed herein shall be completed within Three Hundred Sixty Five (365) consecutive calendar days from the date of the Notice to Proceed which shall be issued within ten (10) calendar days of the signing of the Contract. In the event the undersigned fails to complete the Work by said date, or within the time to which such completion may have been extended in accordance with the Contract Documents, he agrees to pay to Owner liquidated damages in the sum of Five Hundred ($500.00) dollars for each calendar day of delay in completing the Work.

Number 2 – Dated _____

Number 3 – Dated _____

Number 4 – Dated _____

BASIS OF AWARD

The Owner reserves the right to award the Contract to the Bidder who submits the lowest Bid and offers the Owner the lowest responsible Bid within the current or revised project budget.

TIME FOR COMPLETION DATE

Since time is of the essence, this Contract must be completed within 365 consecutive calendar days from date of Notice to Proceed. Failure to complete all work within this Three Hundred Sixty Five (365) days will result in enforcement of liquidated damages at the rate of $500.00 per day. No work shall be performed on Saturday, Sunday or holidays, without the prior written expressed approval of the Owner.

The Contractor is further advised that if he fails to perform all work in a timely fashion in compliance with these Plans and Specifications he will be held responsible for all costs incurred by the Owner which may be incurred, such as a payment of fines, interest or penalties resulting from Contractor's lack of completion of all requirements of these Contract Documents within the time allocated. Award of the Contract shall be contingent upon approval of the Contractor by the Owner.

Herewith is a Certified Check or Bid Bond for the following Contract (equal to at least ten percent (10%) but not to exceed $20,000.00 of the Total Bid).

_____ Dollars and _____ Cents

($_____)

payable to the Owner as a surety that the undersigned will enter into a Contract for the work within ten (10) days of date of Notice of Award of Contract. The undersigned proposes to commence work and order materials within ten (10) days after signing of the Contract and to complete the work in accordance with the following schedule and guarantees the work performed and the materials furnished for a period of one (1) year after the final acceptance of the work by the Regulatory Agencies, Owner, and the Engineer.

The Owner reserves the right to award the Contract to whichever responsible Bidder whose Proposal results in the least cost to the Owner and/or serves the best interest of the Owner in its sole judgment.

BIDDER'S DECLARATION

The undersigned, as Bidder, declares that the only person or persons interested in this Bid or Proposal as principal or principals is or are named herein and that no other person that herein named has any interest in this Proposal or in the Contract proposed to be taken; this bid or Proposal is made without any connection with any other person or persons making a Bid or Proposal for the same purpose, the Bid or Proposal is in all respects without fraud or collusion, that he has examined the site of the work, the Form of Contract and Specifications, and the Drawings therein referred to, and has read the ADVERTISEMENT, INSTRUCTIONS TO BIDDERS, PROPOSAL FORMS, CONTRACT, BONDS, GENERAL CONDITIONS and TECHNICAL SPECIFICATIONS hereto attached and has reviewed the plans comprising the work described herein and fully understands all the same; that he proposes and agrees, if this Proposal is accepted, that he will contract with the Owner in the Form of a Contract accompanying this Bid, to perform all the work required in accordance with the Plans and Instructions to Bidders, Proposal Forms, Contract, Bonds, General Conditions and Technical Specifications.

CERTIFICATION OF EXAMINATION

The Bidder certifies herewith that he has carefully examined the Plans and Specifications, that he is familiar with the Insurance and administrative requirements of the Contract and that he is fully aware of the materials specified.

Further, the Bidder has personally examined or had an agent examine the work site and that he is fully aware of the confines of the work site.

With consideration of the above, the time schedule, stipulations and the liquidated damages specified, the Bidder submits his Bid.

KNOW ALL MEN BY THESE PRESENTS, that,_____
_____
a (Corporation, Partnership or Individual) duly organized under the laws of the State of New York, with its principal office at _____
_____
hereinafter referred to as the "principal", and _____
_____
(Name of Surety)
hereinafter referred to as the "surety" are held and firmly bound to _____,
(Name and Address of Owner)
hereinafter referred to as the "Owner", or to its successors and assigns, in the penal sum of_____
Dollars, lawful money of the United States, for the payment of which said sum of money well and truly to be made, we, and each of us, bind ourselves, our heirs, executors, administrators, successors and assigns, jointly and severally, firmly by these presents.

WHEREAS, the Principal is about to enter, or has entered, into a Contract in writing with the Owner, for the construction of the _____
(Name and Location of Project)
dated _____, a copy of which is hereby made a part of this Bond as though herein set forth in full;

NOW, THEREFORE, the conditions of this obligation are such that if the Principal, his or its representatives or assigns, shall well and faithfully perform the said Contract and all modifications, amendments, additions, and alterations thereto that may hereafter be made during the original term thereof, and any extensions thereof which may be granted by the Owner, with or without notice to the Surety, and during any guaranty period, according to its terms and its true intent and meaning, and if he or it shall satisfy all claims and demands incurred under such Contract, and shall fully indemnify and save harmless the Owner from all cost and damage which the Owner may suffer by reason of failure so to do, and shall fully reimburse and repay the Owner for all outlay and expense which the Owner may incur in making good any such default, including fees of architects, engineers and attorneys of the Owner, if any, occasioned by such default, then this obligation shall be void, otherwise the same to remain in full force and effect.

The Surety, for value received, hereby stipulates and agrees if requested to do so by the Owner, to be performed under the Contract, pursuant to the terms, conditions, and covenants thereof, if, for any cause, the Principal fails or neglects fully so to perform and complete such Work. The Surety further agrees to commence such Work of completion within twenty (20) days after written notice thereof from the Owner and to complete such Work within such time as the Owner may fix.

The Surety, for value received, for itself and its successors and assigns, hereby stipulates and agrees that the obligation or said Surety and its bond shall be in no way impaired or affected by any extension of time, modifications, omission, addition, or change in or to the said Contract or the Work to be performed thereunder, or by any payment thereunder before the time required therein, or by any waiver of any provisions thereof, or by any assignment, subletting or other transfer thereof of any Work to be performed or any monies due or to become due thereunder; and said Surety does hereby waive notice of any and all of such extensions, modifications, omissions, additions, changes, payments, waivers, assignments, subcontract and transfers, and hereby expressly stipulates and agrees that any and all things done and omitted to be done by and in relation to assignees, subcontractors and other transferees, shall have the same effect as to said Surety as though done or omitted to be done by or in relation to said Principal.

IN WITNESS WHEREOF, the Principal and the Surety have hereunto set their hands and seals, and such of them as are corporations have caused their corporate seals to be hereunto affixed and these presents to be signed by their proper officers, this _____ day of _____ .

SPECIMEN

PAYMENT BOND
(LABOR AND MATERIAL BOND)

KNOW ALL MEN BY THESE PRESENTS, That we, _____
_____
a (Corporation, Partnership or Individual) duly organized under the laws of the State of New York, with its principal office at_____
_____
hereinafter referred to as the "principal", and_____
_____
(Name of Surety)
hereinafter referred to as the "surety" are held and firmly bound to
_____
(Name and Address of Owner)
hereinafter referred to as the "Owner", or to its successors and assigns, in the penal sum of_____
lawful money of the United States, for the payment of which said sum of money well and truly to be made, we, and each of us, bind ourselves, our heirs, executors, administrators, successors and assigns, jointly and severally, firmly by these presents.

WHEREAS, the Principal is about to enter, or has entered, into a Contract in writing with the Owner, for the construction of the _____
(Name and Location of the Project)
dated_____, a copy of which is hereby made a part of this Bond as though herein set forth in full;

NOW, THEREFORE, the conditions of this obligation are such that if the Principal, his or its representatives or assigns, and Subcontractors to whom Work under this Contract is sublet, and his or her successors and assigns, shall promptly pay or cause to be paid all lawful claims for;

(a) Wages and compensation for labor performed and services rendered by all persons engaged in the prosecution of the Work under said Contract, and any amendment or extension thereof or addition thereto, whether such persons be agents, servants or employees of the Principal or of any such Subcontractor, including all persons so engaged who perform the work of laborers or mechanics at or in the vicinity of the site of the Project, regardless of any contractual relationship between the Principal or such Subcontractors, or his or their successors or assigns, on the one hand, and such laborers or mechanics on the other, but not including office employees not regularly stationed at the site of the Project; and

(b) Materials and supplies (whether incorporated in the permanent structure or not), as well as fuels, oils, implements or machinery furnished, used or consumed by said Principal or any Subcontractor at or in the vicinity of the site of the Project in the prosecution

of the work under said Contract and any amendment or extension thereof or addition thereto;

then this obligation shall be void; otherwise to remain in full force and effect.

This Bond is subject to the following additional conditions, limitations and agreements:

(a) The Principal and Surety agree that this Bond shall be for the benefit of any materialman or laborer having just claim, as well as the Owner.

(b) All persons who have performed labor, rendered services or furnished materials and supplies, as aforesaid, shall have a direct right of action against the Principal and his, its or their successors and assigns, and the Surety herein, or against either or both, or any of them and their successors and assigns. Such persons may sue in their own name, and may prosecute the suit to judgement and execution without the necessity of joining with any other person as party plaintiff.

(c) The Principal and Surety agree that neither of them will hold the Owner liable for any judgement for costs or otherwise, obtained by either or both of them against the laborer or materialism in a suit brought by either a laborer or materialman under this Bond for monies allegedly due for performing work or furnishing material.

(d) The Surety or its successors and assigns shall not be liable for any compensation recoverable by an employee or laborer under the Workmen's Compensation Law.

(e) In no event shall the Surety, or its successors or assigns, be liable for a greater sum than the penalty of this Bond or be subject to any suit, action or proceeding hereon that is instituted by any person, firm, or corporation hereunder later than two years after the complete performance of said Contract and final settlement thereof.

The Principal, for himself and his successors and assigns, and the Surety, for itself and its successors and assigns, do hereby expressly waive any objection that might be interposed as to the right of the Owner to require a bond containing the foregoing provisions, and they do hereby further expressly waive any defense which they or either of them might interpose to an action brought hereon by any person, firm or corporation, including Subcontractors, materialmen, and third persons, for work, labor, services, supplies or material performed, rendered, or furnished as aforesaid upon the ground that there is no law authorizing the Owner to require the foregoing provisions to be placed in this Bond.

And the Surety, for value received, for itself and its successors and assigns, hereby stipulates and agrees that the obligation or said Surety and its bonds shall be in no way impaired or affected by any extension of time, modification, omission, addition, or change in or of the said Contract or the Work to be performed thereunder, or by any payment thereunder before the time required therein or by any waiver of the provisions thereof, or by any assignment, subletting or other transfer thereof or any part thereof, or of any Work to be performed, or any monies due or to become due thereunder; and said Surety does hereby waive notice of any and all of such extensions, modifications, omissions, additions, changes, payments, waivers, assignments, subcontracts, and transfers, and hereby

expressly stipulates and agrees that any and all things done and omitted to be done and in relation to assignees, Subcontractors, and other transferees shall have the same effect as to said Surety as though done or omitted to be done by or in relation to said Principal.

IN WITNESS WHEREOF, the Principal and the Surety have hereunto set their hands and seals, and such of them as are corporations have caused their corporate seals to be hereunto affixed and these presents to be signed by their proper officers, this _____ day of _____.

NOTICE OF AWARD

TO:

_____

_____

_____

PROJECT: _____
Name of Project

_____

_____
Name of Owner

To Whom It May Concern:

The OWNER has considered the BID Proposal submitted by you for the above described Project on _____.

You are hereby notified that your BID has been accepted in the amount of $_____.

* You are required by the Contract Documents to execute the Agreement and furnish the required Contractor's Performance Bond, Payment Bond (Labor and Material Bond) and certificates of Insurance within seven (7) calendar days from the date of this Notice to you.

If you fail to execute said Agreement and to furnish said Bonds within seven (7) calendar days from the Date of this Notice, said Owner will be entitled to consider all your rights arising out of the Owner's acceptance of your BID as abandoned. The OWNER will be entitled to such other rights as may be granted by law.

You are required to return an acknowledged copy of this NOTICE OF AWARD to the OWNER.

Dated this _____ day of _____

BY:_____

TITLE:_____

* Proof of reinsurance in excess of New York Surety Company's authorized bonding limit for any one (1) project, must be submitted with the Performance and Payment (Labor and Material) Bonds. The Surety on the reinsurance must meet the applicable provisions of the "Instructions to Bidders".

RECEIPT AND ACCEPTANCE OF NOTICE OF AWARD

Receipt and acceptance of the above NOTICE OF AWARD is hereby acknowledged:

BY:_____, this _____
the _____ day of _____.

_____

_____
(Name of Owner)

OWNER: _____

CONTRACTOR: _____

The following changes are hereby made to the Contract Documents:

Justification:

1. Original CONTRACT PRICE $_____

2. Current CONTRACT PRICE
(adjusted by previous CHANGE ORDER(S)) $_____

3. The CONTRACT PRICE due to this CHANGE
ORDER will be (increased) (decreased) by $_____

4. The new CONTRACT PRICE including this
Change Order will be 2 ± 3 = 4) $_____

Change to CONTRACT TIME _____

The CONTRACT TIME will be (increased) (decreased) by _____ calendar days.

The date for completion of all work will be _____ (Date).

Approvals Required:

To be effective, this Change Order must be approved by the Owner.

Requested By: _____ (Contractor)

Recommended By: _____ (Engineer)

Accepted By: _____ (Owner)

THIS FORM MUST ACCOMPANY ALL SUPPORTING DATA, AS REQUESTED BY THE ENGINEER, NECESSARY TO EVALUATE THE CLAIM.

GENERAL CONDITIONS

G1. SCOPE OF WORK

A. The Contractor shall furnish all labor, materials, equipment, plant, power, water, light, heat, fuel, tools, appliances, supplies and all other means of construction necessary or proper for executing and completing the Contract; restore to their original conditions, all surfaces disturbed; pay cost of all insurance; bear all losses due to the nature of the Work and costs incidental to suspension or discontinuance of the Work except as otherwise provided; assume all responsibility of whatever nature or kind, indemnify the Owner and Engineer from all claims; secure and pay for all permits unless otherwise provided; conform to all county, state, municipal or federal regulations, legislation and requirements; abide by all rules and regulations of railroad and utility companies whenever or wherever jurisdiction of these agencies prevails; do all work necessary to conform the Project to the Contract Documents; leave intact the work of all adjoining contractors unless otherwise ordered by the Engineer; perform and complete the Work in a manner best calculated to permit construction, consistent with safety of life and property and satisfactory to the Engineer and in strict accordance with the Contract Documents; protect the Work during construction, clean up the Work during and after construction, and maintain it until final acceptance as hereinafter provided.

B. The Contractor shall do all work and pay all costs of protecting, supporting, maintaining, repairing if damaged, relocating and restoring all surface, sub-surface or overhead structures and all other property including pipes, conduits, ducts, tubes, chambers and appurtenances, public or private, in the vicinity of the Work except as otherwise specified.

C. The Contractor shall do all extra work, as ordered in writing by the Engineer pursuant to the Owner's authorizations, and compensation therefor shall be in accordance with EXTRA WORK.

G2. PLANS AND SPECIFICATIONS

A. The Contractor will be furnished with two (2) sets of Plans and Specifications which have been approved by the regulatory agency or agencies having jurisdiction over the project. One (1) copy of the Plans and Specifications furnished to the Contractor shall be kept constantly at the site of the Work. The inspectors for the regulatory agency or regulatory agencies or representatives of the Engineer will not recognize or use any Plans and Specifications not approved by the agency or agencies. Anything shown on the Plans and not mentioned in the Specifications or mentioned in the Specifications and not shown on the Plans, and all work and materials necessary for the completion of the Work according to the intent and meaning of the Contract Documents, shall be furnished, performed, and done, as if the same were both mentioned in the Specifications and shown on the Drawings. Any conflict or inconsistency between the Plans and Specifications, or any discrepancy between the figures and scale of drawings shall be submitted by the Contractor to the Engineer, whose decision thereon shall be conclusive.

B. In the event the meaning of any portions of the Specifications or Drawings or any supplementary drawings or instructions of the Engineer is doubtful, the same shall be understood to call for the best type of construction, both as to materials and workmanship, which reasonably can be interpreted.

C. The Engineer will make all necessary explanations as to the meaning and intent of the Plans and Specifications, and shall give all orders contemplated therein or thereby or in every case in which a difficult or unforeseen condition shall arise in the performance of the Work.

D. All materials and workmanship shall be strictly in accordance with the Plans and Specifications.

E. The Plans show the approximate size, arrangement and location of the Work. During construction, exact lines, grades, shapes and dimensions will be established, and the Contractor shall construct the Work exactly in accordance therewith, subject however to changes as provided for in CHANGES IN PLANS AND SPECIFICATIONS and EXTRA WORK.

F. The figures shown on the Plans after the word "elevation", or abbreviation of it, shall mean the distance in feet above the datum adopted by the Engineer. If the Contractor has any doubt or question as to such datum, he shall ascertain the datum being used from the Engineer.

G. Any errors or omissions in the Plans and Specifications may be corrected by the Engineer, when such corrections are necessary for the proper fulfillment of their intentions as construed by him.

H. Any Work that may reasonably be inferred from the Specifications or Drawings as being required to produce the intended result shall be provided whether or not specifically called for. Work, materials or equipment described in words which so applied have a well known technical or trade meaning shall be deemed to refer to such recognized standards.

I. The Drawings show the sizes, materials, elevation and locations of underground and exposed utilities, structures and other physical features, upon which Engineer has relied in the preparation of the Drawings and Specifications, and which have been determined from the best available information, by actual surveys or furnished and taken from the records of utility companies and drawings of existing facilities. Neither Owner nor Engineer assumes responsibility for the possibility that utilities, structures and objects other than those shown on the Drawings may be encountered or that actual sizes, materials, elevations and locations may be different from those shown. It is the Contractor's sole responsibility to coordinate all conflicts with utilities. The Owner will assume no liability for conflicts, delays, damages, or other impacted costs arising out of conflicts with utilities or coordination problems with utilities.

J. Where detailed information may be required for the Work, Contractor shall, at his expense, furnish all labor, tools, equipment and all other items and do whatever is necessary to verify and substantiate the conditions and to definitely establish the information required. Because of the nature of the Work, minor adjustments may be required in the Work to meet existing conditions. Contractor shall make such adjustments at no additional cost to Owner.

K. The Drawings indicate the extent and general arrangement of the Work. Any proposed departures from the Drawings, deemed necessary by Contractor to accommodate the materials and equipment he proposes to provide, shall be submitted to Engineer as soon as practical with complete details, designs, reasons for the departure and any other information Engineer may require. Departures from the Drawings, without Engineer's approval, are not permitted. All costs associated with approved changes shall be borne by Contractor.

L. If any parts of the Contract Documents are in conflict with the requirements of a public authority having jurisdiction over the Work, then the public authority's requirements shall govern. However, where the requirements of the Contract Documents exceed those of the public authority, then the Contract Documents shall govern.

M. The organization of the Specifications into divisions, sections, and articles, and the arrangement of Drawings shall not control Contractor in dividing the Work among subcontractors or in establishing the extent of Work to be performed by any trade. Whenever the provisions of the Contract Documents may conflict with any agreement or regulations of any kind in force among members of any trade association, union or council which regulates or distinguishes that work shall or shall not be included in the work of any particular trade, Contractor shall make all necessary arrangements on his own to reconcile any such conflict of provisions without recourse to Engineer or Owner.

N. The Table of Contents, titles, headings, running headlines and marginal notes contained in the Contract Documents are solely to facilitate reference to various provisions of the Contract Documents and in no way affect, limit or cast light on the interpretation of the provisions to which they refer.

G3. OTHER CONTRACTS

A. The Owner reserves the right to do work by other contractors or by its own forces, and to permit public utility companies and others to do work during the progress and within the limits of or adjacent to the Project, and the Contractor shall conduct his operations and cooperate with such other parties so as to cause as little interference as possible with such other work. The Contractor agrees to make no claim against the Owner for additional payment due to delays or other conditions created by the operation of such other parties. If there is a difference of opinion as to the respective rights of the Contractor and others doing the work, within the limits of or adjacent to the Project, the Engineer shall decide as to the respective rights of the various parties involved in order to secure completion of the Work in a satisfactory manner, and his decision shall be final and binding on the Contractor.

B. If any portion of the Work of the Contractor or any of his subcontractors depends for proper execution or results upon the work of any other contractor, the Contractor shall inspect same and promptly give to the Engineer notice of all defects in the work of such other contractor as renders it unsuitable for proper execution and completion of the Work. The Contractor shall further notify the Engineer of all delays by such other contractor, in the performance of his work, as will affect the timely performance of the Work. The failure of the Contractor to so inspect and give notice shall constitute an acceptance by him (but not by the Owner) of the work of such other contractor as fit and proper for the reception of the Work, except as to defects developing in the work of such other contractor after the execution of the Work, and an acknowledgment of the timely performance by such other contractor of his work.

G4. OBSTRUCTIONS ENCOUNTERED

A. The Owner and the Engineer expressly disclaim all responsibility for the accuracy or completeness of the information given on the Drawings with regard to existing structures and pipelines.

B. In the case where the Contractor discovers an obstruction not indicated on the Drawings or not described via specification reference, he shall immediately notify the Engineer of the obstruction's existence. The Engineer will determine if the obstruction is to be relocated or removed. Compensation for this extra work shall be as outlined in "Extra Work".

G5. SUPERINTENDENCE AND WORKMEN

A. The Contractor shall employ a competent superintendent, foremen, and experienced mechanics and laborers and others skilled in the particular duties entrusted to them. When requested, the Contractor shall furnish to the Engineer, the qualifications of the superintendent, foremen, or any other individuals delegated with important functions connected with the Project.

B. Whenever the Engineer or regulatory agency representative informs the Contractor or his representative in charge that any person on the Work is incompetent or disorderly, or is working contrary to the Specifications or the instructions of the Engineer, or that the Engineer knows that the person has been incompetent or disorderly on this or any previous work, or is objectionable, that person shall thereupon be immediately dismissed from the job and shall not be given employment on any work connected with the Contract.

C. When requested Contractor shall deliver to the Engineer a record of the numbers, salaries and classifications of men employed upon the Work each day of the job.

D. The Contractor shall not permit the use of intoxicating liquors on or about the Project nor shall he permit anyone suffering from the effects thereof to remain on the Work.

E. The Contractor shall give preference in employment to local labor whenever qualified local labor is available, and he shall be the judge of the qualifications of local labor.

G6. NONDISCRIMINATION PROVISIONS

A. During the performance of this Contract, the Contractor agrees that in the hiring of employees for the performance of work under this contract or any subcontract hereunder, neither the Contractor, any Subcontractor, nor any person acting on behalf of such Contractor or a Subcontractor, shall by reason of race, creed, color, sex, age or national origin discriminate against anyone who is qualified and available to perform the work to which the employment relates.

B. That neither the Contractor, Subcontractor, nor any person on his behalf shall, in any manner discriminate against or intimidate any employees hired for the performance of work under this contract on account of race, creed, color, sex, age or national origin.

G7. WORK SUBJECT TO CONTROL OF ENGINEER

A. In the performance of the Work, the Contractor shall abide by all orders, directions and requirements of the Engineer issued within the limitations of the Contract Documents.

B. In the event the Contractor is not personally present at the Work, he shall have present at the Work a qualified superintendent to represent him and with power to act and be the recipient of orders and to obey all the instructions of the Engineer. If proper provision for the carrying out of this stipulation is not made, then the Contractor shall be held responsible for the execution of such orders and instructions as the Engineer may deem necessary to give to any foreman or other employee about the Work, and the Engineer may order the Work stopped until a duly authorized representative of the Contractor appears and receives his instructions. No claim for damages nor any extension of time in which to complete the Work by reason of such delay will be allowed the Contractor.

C. The Engineer shall in all cases, subject to the power and authority of the Owner, determine classifications, quantities, quality, acceptability and fitness of the several kinds of work which are to be paid for under the Contract; he shall interpret the Plans and Specifications, and all extra work orders and shall determine all questions in relation to the Work and the construction thereof.

D. The Contractor shall employ no plant, equipment, materials, methods or men to which the Engineer objects, and shall remove no plant, materials, equipment or other facilities from the site of the Work without the Engineer's permission.

E. Engineer will have authority to disapprove or reject Work which is "defective", which term is hereinafter used to describe Work that is unsatisfactory, faulty or defective, or does not conform to requirements of the Contract Documents or does not meet the requirements of any inspection, test, or approval or has been damaged prior to approval of final payment.

F. Whenever, in Engineer's opinion, it is necessary or advisable for the implementation of the intent of the Contract Documents, the Engineer will have authority to require special inspection or testing of the Work, whether or not such Work be then fabricated, installed or completed.

G. Engineer will be the interpreter of the requirements of the Contract Documents and the judge of the performance thereunder. In his capacity as interpreter and judge he will endeavor to secure faithful performance by both Owner and Contractor. He will not show partiality to either and will not be liable for the result of any interpretation or decision rendered in good faith. Claims, disputes and other matters relating to the execution and progress of the Work or the interpretation of or performance under the Contract Documents shall be referred to Engineer for decision; which he will render in writing within a reasonable time.

H. Neither Engineer's authority to act under this Article or elsewhere in the Contract Documents nor any decision made by him in good faith either to exercise or not exercise such authority shall give rise to any duty or responsibility of Engineer to Contractor, any subcontractor, any material man, fabricator, supplier or any of their agents or employees or any other person performing any of the Work.

I. Engineer will not be responsible for or have control or charge over the acts or omissions of Contractor, or any subcontractors, or any of his or their suppliers, agents, or employees or any other persons at the site or otherwise performing any of the Work, and he will not be responsible for Contractor's failure to perform the Work in accordance with the Contract Documents.

G8. AUTHORITY AND DUTIES OF INSPECTORS

A. Inspectors who are employees of the Engineer, are authorized to inspect all work done and materials furnished. Such inspection extends to all parts of the Work, and to the preparation or manufacture of the materials to be used. In case of a dispute arising between the Contractor and the Inspector as to materials furnished or the manner of performing the Work, the Inspector will have the authority to reject material or suspend the Work until the question at issue can be referred to and decided by the Engineer. The Inspector is not authorized to revoke, alter, enlarge, relax or release any requirements of the Contract Documents, nor to approve or accept any portion of the Work, nor to issue instructions contrary to the Plans and Specifications. The Inspector shall in no case act as foreman or perform other duties for the Contractor, nor interfere with the management of the Work by the Contractor. All advice which the Inspector may give the Contractor shall in no way be construed as binding the Engineer or the Owner in any way, nor as releasing the Contractor from the requirement for fulfillment of the terms of the Contract.

G9. INSPECTION AND CORRECTION OF WORK

A. All materials furnished and work done will be subject to inspection by the Engineer, other representatives including but not limited to the Owner, the Westchester County Department of Health and where applicable, and the Town Fire Marshal and Building Department. The Engineer will condemn all work or materials not found in accordance with the Specifications, and such condemned work and materials shall be removed, and other work and materials furnished in accordance therewith. All materials rejected by the Engineer as being unfit for the fulfillment of the particular clause in the Specifications to which they refer shall be removed from the Work within a period of twenty-four hours, or a shorter period if the Engineer so directs. Should the Contractor refuse to remove the unfit work and materials as ordered, then the Engineer may stop the Contractor from proceeding with the Work and the Owner may supply personnel, equipment and materials to remove the condemned work and materials, at the cost and expense of the Contractor.

B. The inspection or supervision, or failure to inspect or supervise, or the presence of any employee of the Owner during the execution of the Work, or any failure on the part of the Engineer or any of his authorized agents to detect inferior work or materials and condemn the same, shall not be construed to imply an acceptance of such work or materials; nor shall it be construed as barring the Owner, at any subsequent time, from the recovery of such sum of money from the Contractor as may be needed to construct or build anew all portions of the Work in which

fraud was practiced, improper work executed, or improper material furnished and built into the Work.

C. The Contractor shall furnish all necessary facilities should it be desirable at any time to make an examination of the work already completed. Should any portion of the Work be found defective in any respect, the expense of the examination shall be borne by the Contractor. If all is found satisfactory, the expense will be paid for as Extra Work unless otherwise specified elsewhere in the Contract Documents. If, in the opinion of the Owner, it is undesirable to reconstruct or correct any portion of the Work injured or not performed in accordance with the Contract Documents, the compensation to be paid to the Contractor thereunder shall be reduced by such amount as may be equitable under all circumstances.

G10. INSPECTION OF FACILITIES BY REGULATORY AGENCIES

A. Representatives of Westchester County Department of Health, the New York State Department of Environmental Conservation and any other regulatory agencies shall have access to the work wherever it is in progress or preparation and the Contractor shall provide facilities for such access and inspection.

G11. CONTRACTOR'S RESPONSIBILITY

A. The Contractor shall be conclusively presumed to be acquainted with all existing conditions and to guarantee that all work, materials and equipment shall, upon final completion of the Work, be turned over to the Owner in a complete and perfect condition. The Contractor shall be responsible for the proper care, maintenance and protection of all work, materials, and equipment, until the entire Contract is completed and all work, materials, and equipment are found in good condition and accepted. The Contractor shall be responsible for the entire Work until completed and accepted by the Engineer and the Owner.

B. The Contractor shall, at all times, provide the Owner, the Engineer, assistants and inspectors under him, and all county, state and federal agencies having jurisdiction, with necessary facilities for determining both on the Work and at the places of manufacture, that all work being performed, and all materials and equipment being manufactured are strictly in accordance with the Contract Documents. A seven-day notification in writing, stipulating the time and place where the manufacturing is to be done, shall be given the Engineer prior to the commencement of manufacture of any materials and equipment, in order that a representative of the Owner may be present, if so desired, to observe and inspect the operations.

C. Until final acceptance of the Work by the regulatory agencies and the Owner, the Contractor shall be responsible for all damage to the Work, including action of the elements and all other causes. The Contractor shall continuously and adequately protect the Work against damage from any cause.

G12. NOTIFICATION TO UTILITIES AND AUTHORITIES

A. The Contractor shall within ten (10) days of receipt of a Notice to Proceed, request a mark-out of all existing utilities within the work area by the appropriate central locating agency. No work shall proceed until the mark-out is complete.

B. In addition the Contractor shall notify, in writing, the water, gas, electric and telephone companies, and all other utility companies and authorities having facilities which are subject to interference, 72 hours in advance of the proposed time to perform work in the area, in order that they may take such precautions as are necessary to protect their property.

G13. SUBLETTING

A. The Contractor shall not assign, transfer, or sublet the Contract, in whole or in part, to any other person or in any way abridge the terms of the Contract Documents, without express resolution of the Owner, but rather shall keep it in the Contractor's name and control until completed and accepted by the regulatory agencies, Engineer and the Owner. The Contractor shall, likewise, not assign any of the money payable under the Contract.

B. Approval by the Owner of the subletting of any part of the Work, shall not under any circumstances relieve the Contractor or his Surety of any liabilities or obligations under the terms of the Contract Documents, nor shall it create any contractual relations between any subcontractor and the Owner.

C. Should a subcontractor violate any of the terms of these Specifications, the Owner may, at its option, require the Contractor to end and terminate such subcontract.

D. In the event approval is given for the subletting of part of the Project, the agreement between the subcontractor and the Contractor will be subject to examination by the Engineer and the approval of the Owner. Copies of all subcontracts shall be filed with the Owner. Under no conditions will the subletting of the entire Work be allowed.

G14. INSURANCE

As a minimum, the following insurance shall be maintained:

A. The Contractor shall not commence work under the Contract until he has obtained all the insurance required under this article, and such insurance has been approved by the Owner, nor shall any subcontractor be permitted to commence work on his subcontract until similar insurance has been so obtained by such subcontractor submitted to the Contractor, who shall review same for compliance with these requirements and if found to meet these requirements, submit same to the Owner for approval by the Owner. All insurance required shall be maintained in force until all work to be performed under the terms of the Contract is satisfactorily completed.

B. Compensation Insurance - The Contractor shall provide Workmen's Compensation and Employers' Liability Insurance in accordance with the statutes of the state in which the Work is being executed, and all other applicable laws and regulations, for all employees engaged in work under the Contract, and in case any such work is sublet, the Contractor shall require the subcontractor to provide similar insurance unless his employees are covered by the Contractor and the insurance policies and endorsements thereto furnished by the Contractor so stipulate. If any class of employees engaged in hazardous work under the Contract cannot, for any reason, be protected by the Workmen's Compensation and Employers' Liability Insurance, the Contractor shall provide adequate insurance for the protection of such class of employees.

C. Bodily Injury Liability (Public Liability) and Property Damage Insurance The Contractor shall carry:

1. Bodily Injury Liability Insurance, in an amount not less than $2,000,000.00 for injuries, including accidental death, to any one person and, subject to the same limit for each person, in an amount not less than $5,000,000.00 on account of one accident.

2. Contractor's Property Damage Insurance, in an amount not less than $2,000,000.00 for damages on account of any one accident and in an amount not less than $2,000,000.00 for damages on account of all accidents. The insurance shall provide, during the life of the Contract, for the following special hazards: blasting and explosion, collapse, underground damage coverage of all utilities and appurtenances, tree damage in locations where work is to be performed, collapse of or structural injury to any structure due to excavation, pile driving or cofferdam work, shoring or demolition of any structure or removal or rebuilding of any structural support thereof.

   It shall provide adequate protection for the Contractor and his subcontractors against damage claims which may arise from any operations under the Contract, whether such operation be by the insured or by anyone directly or indirectly employed by him. The policy shall also provide for reinstatement of full coverage after payment of each claim.

3. Each policy shall contain a Hold Harmless clause covering the liability set forth in the Article entitled INDEMNIFICATION OF THE OWNER AND ENGINEER, specifically naming the Owner by name and the firm of Robinson & Muller Engineers, P.C. (R&M) and its employees, sub-consultants, etc. as additional named insured.

D. Owner's Protective Liability Insurance – To protect the Owner and Engineer and their employees from claims arising from the operation of the Contractor and its Subcontractors for damages for personal injury and property damage as defined above and for the amount specified above under Bodily Injury Liability and

Property Damage Insurance. In addition, the policy shall contain the following provisions:

The presence of the Owner's Engineer or representatives on the site of the work shall not invalidate any policy of insurance. Any policy shall not be invalidated by reason of any violation of any of the terms of any policy issued to the Contractor. Policy shall be in the amounts specified above for Bodily Injury Liability and Property Damage Insurance.

E. Automobile Liability and Property Damage Insurance - The Contractor shall carry Automobile Liability Insurance in the same limit required in C.1., and Automobile Property Damage Insurance in an amount not less than $500,000.00, covering motor vehicles owned by the Contractor, and insurance in the same limits for injuries and property damage resulting from use of motor vehicles not owned by the Contractor but which are operated in connection with the Work being performed under this Contract.

F. Builder's Risk Insurance - The Contractor shall procure and maintain, during the life of this Contract, Fire, Vandalism, Malicious Mischief, Water Damage, Lightning and Extended Coverage Insurance, and Flood Insurance, each in an amount equal to the bid price of the Contract, covering the structures and equipment involved in the Contract and the material stored at the site.

G. Personal Injury Liability Insurance - To protect the Owner and Engineer and their employees from claims arising from the employees of the Contractor and his subcontractors for damages of personal injury being described as willful torts, to wit: false arrest, detention and/or imprisonment, malicious prosecution, libel, slander and/or defamation of character, invasion of privacy, wrongful eviction and/or wrongful entry; in the amounts specified above for Comprehensive General Liability Insurance.

H. "Hold Harmless" Clause: Responsibility for Injuries to Persons or Property - The Contractor shall be solely responsible for all physical injuries (including death) to persons (including, but not limited to, employees of the Contractor and subcontractors and employees of the Owner and the Engineer), or damage to property (including, but not limited to, property of the Owner or the Contractor or subcontractors) occurring on account of or in connection with the performance of the work hereunder or sustained by an employee of the Contractor or subcontractor, Owner or Engineer or other persons while at the site of the work, and shall indemnify and save harmless the Owner and Engineer from loss and liability upon any and all claims on account of such injuries to persons (including death) or damage to property, and from all costs and expenses in suits which may be brought against the Owner and Engineer on account of any such injuries to persons or damage to property, irrespective of the actual cause of the accident and irrespective of whether it shall have been due to negligence of the Contractor or his Engineer and their respective agents, servants and employees.

The Contractor shall be solely responsible to the Owner or others for all injuries to persons or damage to property therein occurring on account of the

performance of work under this Contract whether due to negligence, fault or default of the Contractor, and irrespective whether it shall have been due to the negligence, fault or default of the Owner, the Engineer, its respective agents, servants or employees. The Contractor shall fully protect, indemnify and save harmless the Owner and the Engineer and their employees from loss and from liability upon any and all claims on account of such injuries to employees or other persons or damage to property on account of any work done by the Contractor and from any costs and expenses in suits which may be brought against the Owner and/or the Engineer or their employees for such damages or injuries.

The obligation of the Contractor to indemnify and save harmless the Owner and the Engineer and their employees as hereinabove set forth is absolute and not dependent upon any questions of negligence on the part of the Contractor, the subcontractors, the Owner, the Engineer and employees, their respective agents, servants or employees. The approval by the Owner, or the Engineer of the methods of doing the work or the failure of the Owner, or the Engineer to call attention to improper or inadequate methods or to require a change in methods or to direct the Contractor to take any particular thing shall not excuse the Contractor in case of any such injury to persons or damage to property owned by Owner or others.

I. Limitation of Liability - The Contractor and all subcontractors agree to limit the negligent acts, errors or omissions, such that the total aggregate liability of the Owner and the Engineer, due to the Engineer's possible professional negligent acts, errors or omissions, to those named shall not exceed Fifty Thousand Dollars ($50,000) or 5% of the Contract award amount, whichever is greater.

J. Cost and Proof of Carriage of Insurance - The Contractor shall furnish the Owner with copies of all insurance policies, each of which shall contain the following provisions: "Such insurance shall not be canceled, terminated, modified or changed by either Contractor or Insurance Company, except on thirty (30) days prior written notice sent by the Insurance Company via certified mail to the Owner and Engineer." Canceled insurance policies shall be replaced in kind before cancellation becomes effective.

K. The term "caused by accident" in the standard policy shall be broadened by the inclusion of the term "occurrence."

L. Proof of Insurance - The Contractor shall furnish the Owner, for its file, satisfactory proof that it carries the insurance required, by submitting the original insurance policies and endorsements thereto or properly executed conformed copies. Each insurance policy and endorsement thereto shall contain an undertaking by the insurance carrier not to cancel the policy except upon thirty (30) days prior written notice to the Owner by certified mail.

M. The original policies and endorsements thereto shall specifically refer to the Project covered under the Contract and shall state that the insurance, as provided, conforms to the requirements of this Article.

N. Each and every subcontractor shall be bound by these same terms of insurance and shall furnish originals of policies to the Owner.

G15. ACCIDENT PREVENTION

A. During the performance of the Work, the Contractor shall exercise all reasonable precautions for the protection of persons and property. The safety provisions of applicable laws and building and construction codes shall be observed. Machinery, equipment and all other physical hazards shall be guarded in accordance with the safety provisions of the Manual of Accident Prevention in Construction, published by the Associated General Contractors of America, to the extent that such provisions are not inconsistent with federal, state or municipal laws or regulations.

B. If any operation, practice or condition is deemed by the Engineer to be unsafe, he will notify the Contractor to take corrective action, and that operation or practice shall be promptly discontinued until the required remedial action upon the affected portion of the Work is complete.

C. The Contractor is not permitted to store materials, move construction equipment, or commit any action, that would cause loading on the side walls of open trenches, whether sheeted or not. Storage of materials or equipment, or movement thereof, shall be permitted only at a distance from the side walls of the trenches equal to or greater than the depth of the trench.

D. The Contractor shall keep in his office, on site, ready for immediate use, all articles necessary for giving first aid to the injured. He shall also have standing arrangement for the immediate removal and hospital treatment of all persons who may be injured on the Work.

E. Nothing in the foregoing paragraphs shall be construed as relieving the Contractor from full responsibility at all times for safe prosecution of the Work in accordance with the latest OSHA regulations.

G16. INDEMNIFICATION OF THE OWNER AND THE ENGINEER

A. The Contractor shall pay and make good all losses and damages arising out of all causes connected with the Contract, and shall indemnify and save harmless the Owner and the Engineer from all claims, liability, and responsibility, of every nature and kind, for losses, damages, and injuries, which any person or persons may sustain or suffer by reason of or in any way arising out of the Contract. The Contractor shall defend every suit, of any nature, which may be brought against the Owner or any of its officers, agents, or the Engineer, by reason of, or connected with, the work, labor, or materials and equipment furnished under the Contract, and shall pay all costs and expenses of every kind, character, and nature whatever, accruing upon or arising out of the Contract.

G17. NOTICE TO PROCEED AND TIME FOR COMPLETION

A. Inasmuch as the provisions of the Contract relating to the time for performance and completion of the Work are for the purposes of enabling the Owner to proceed with the construction of an improvement in accordance with a predetermined program, and inasmuch as failure to complete the Work within the period herein specified may result in damage or loss to the Owner, time is of the essence of the Contract.

B. Work shall commence as stipulated in Article 3 of the attachment to the Specimen Agreement. Thereafter, the Contractor shall notify the Engineer in writing, forty-eight (48) hours in advance of the date he intends to actually begin work.

C. Time for completion of the Work shall be in accordance with that stipulated in the Agreement.

D. The date for completion will be calculated from the date the Owner signed the Contract. The Contractor shall prosecute the Work with diligence from day to day, and complete it at the time fixed.

E. For the purpose of defining completion date, the Project will be considered complete when all Work covered by the Contract has been performed and all installations and equipment have been tested and are ready for permanent use as authorized and as acceptable by the regulatory agencies. Removal of the Contractor's plant and equipment and other minor adjustments which do not prevent use of the Project will not be a factor in establishing the completion date.

F. Notwithstanding the foregoing, the Engineer will establish the date of substantial completion when the project is accepted and ready for operation, and no large or major items of work are as yet outstanding. At such time, the Engineer will issue a Certificate of Substantial Completion and a punch list, itemizing the items of work remaining. The punch list will include "minor" items only, as defined solely by the Engineer. Any prior punch lists, which include "major" or significant items, as defined by the Engineer, shall not be a criteria in establishing the date of substantial completion.

G18. EXTENSION OF TIME

A. If the Contractor is delayed or obstructed in the prosecution of the Work by the neglect, delay, or default of any other contractors having a contract with the Owner for adjoining or contiguous work, or by any neglect, delay or default attributable to the Owner, or by any damage that may happen to the Work by fire, unavoidable accident or any unusual action of the elements, he shall be entitled to such an extension of time for the completion of the Work as the Engineer certifies to as being just and reasonable; provided, however, that the Contractor shall make a claim in writing to the Owner for such extension of time within five (5) days after the date of the alleged cause for such delay occurred. This

paragraph is subject to the requirements of General Conditions Article relating to WEATHER.

B. A reasonable and proper extension of time for completion of the Work may be allowed to the Contractor on account of extra work that may be ordered in accordance with the terms of the Contract, and as evaluated by the Engineer.

C. If the satisfactory execution and completion of the Contract shall require work or material in significantly greater amounts or quantities than those set forth in the Contract, then the Contract time for completion will be reviewed for possible extension.

D. Should the completion of the Contract be delayed in any manner whatsoever by reason of negligence on the part of the Contractor, the Owner may grant an extension of Contract time for completion, provided that the Contractor shall compensate the Owner for all engineering, inspection and related costs incurred by the Owner as a result of the granting of such permission. Likewise, should the Contractor be given approval to work on Saturdays, Sundays or state and federal holidays, he shall compensate the Owner for all engineering, inspection, and related costs involved as a consequence thereof. Such compensation will be deducted from the Contractor's payments, and will be equal to the sums billed to the Owner by the Engineer and/or others.

E. No claim for damages shall be made by the Contractor for any delay or hindrance from any cause whatsoever in the progress of the Work or any section or portion thereof. If, for any reason, there shall be any delay in the acquisition of lands, easements, or interests therein, and the Contractor shall thereby be delayed in the performance of the Work, the Contractor will be given an extension of time for the date of completion, but the Contractor shall not thereby be released from any obligations under the Contract nor be entitled to additional compensation therefore.

F. It is incumbent upon the Contractor to determine which, if any, of the required lands and easements have been obtained by the Owner, and to devise his construction schedule accordingly. Scheduling of manpower and equipment shall also be performed in consideration of these requirements. No claims will be acknowledged for idle equipment, loss of anticipated profits, or other similar circumstances.

G19. <u>DEFAULT IN COMPLETION</u>

A. The Engineer will determine the number of calendar days that the Contractor is in default in completing the Work and will make recommendations regarding the same to the Owner. The decision of the Owner regarding the duration of default shall be final in the case and shall be binding and conclusive upon all parties to the Contract.

G20. STRIKES

A. The Contractor shall adjust his schedule and performance to nullify time lost due to any and all strikes, or other labor troubles over which he has control, and no allowance will be made for such delays in the time limit herein named.

G21. LIQUIDATED DAMAGES

A. Inasmuch as the damages and losses to the Owner which will result from a failure by the Contractor to complete the Work within the period specified, extended as herein provided, are not readily subject to certain computation, but may include fines or penalties, payments to Contractees necessitated by not having sanitary facilities completed and ready for operation by the required date of completion, interest on moneys borrowed for construction, additional engineering, legal and/or auditing costs, inspector's wages and loss from the inability of the Owner to enter into possession, the damages to the Owner for delay in case of such failure on the part of the Contractor shall be liquidated in the sum as stipulated in the Proposal Forms for each consecutive calendar day in excess of the time specified. Liquidated damages for concurrent contracts are computed and assessed separately for each contract. The Owner is fully authorized and empowered to deduct and retain the amount of all damages determined as hereinbefore stipulated, for each calendar day that the Contractor is in default in completing the Work, from any monies due or to become due the Contractor under the provisions of the Contract, at any time after such damages are so incurred. In the event such damages exceed the amount of all moneys due or to become due, the Contractor or his surety shall pay the balance to the Owner.

G22. WEATHER

A. During unsuitable weather, all work shall stop when such work would be liable to injury by the elements, and the Contractor shall transfer his personnel and materials to those parts of the Work where weather conditions will not have an adverse affect on the workmanship or materials furnished. The Contractor shall not be entitled to any damages on account of such changes or suspension and he shall protect all work that might be injured by the elements and make good all work that is injured.

B. Notwithstanding the contents of A. above, the Contractor shall not be entitled to extension of the Contract Time, nor to claims for additional compensation, occasioned by delays or damages due to inclement weather conditions, it being agreed and understood that inclement weather conditions are a normal occurrence in the climatic region of the Project. Abnormal weather conditions, as determined by the Engineer, may be considered valid grounds for an extension of the Contract Time, but not for additional compensation to the Contractor.

G23. WORKING HOURS - HOLIDAYS AND OVERTIME

A. The work day for the Engineer and his staff shall begin at 8:00 a.m. and end at 4:30 p.m., excepting Saturdays, Sundays, and State holidays. If the Contractor wishes to prosecute any portion of the Work beyond these hours, he shall first obtain permission from the Engineer, notifying him each time in advance, giving him ample time in which to procure an engineer and/or inspector for the work and notify the Owner for his representative to be present if required.

B. The Contractor shall compensate the Owner for the additional engineering and Regulatory Agency personnel inspection costs involved, including the services of the Engineer's and the Owner's and Regulatory Agency personnel, and such compensation shall be deducted from the Contractor's monthly payment. Said compensation will be in the exact sum billed to the Owner by the Engineer or others.

G24. WORKING SITE

A. The Contractor, in all cases, will be required to confine his operations to the limits of the construction right-of-way, or in the instance where the site is owned by the Owner, within the property lines. If the Contractor requires additional space, it will be his responsibility to negotiate and pay for same and to obtain written approval from the Owner of the land.

G25. CHANGES IN PLANS AND SPECIFICATIONS

A. The Owner reserves the right to make changes in the Plans and Specifications or to increase or decrease the nature or scope of work at any time before or after construction has commenced.

B. Except as hereinafter provided, no such change shall be binding upon the Contractor nor require the payment of additional compensation to the Contractor, unless it has been ordered in writing by the Engineer who has been specifically authorized thereto in writing by the Owner.

C. Except as hereinafter provided, no oral agreement, conversation or understanding between the Contractor and the Engineer or any Inspector or anyone representing the Owner before or after the execution of the Contract shall affect or modify any of the terms or obligations of the Contract Documents, nor excuse the performance of any work in any manner contrary to the terms of the Contract Documents.

D. The Contractor shall comply with all oral instructions of the Engineer which require no more than an increase or decrease in quantities of those items covered by unit prices bid in the Proposal. He shall also comply with oral instructions of the Engineer which require no more than a change in location or elevation of pipelines or appurtenances covered by a lump sum price bid in the Proposal which reasonably could be interpreted as involving no additional costs.

E. For all work performed by the Contractor pursuant to such oral instructions which involves an increase in the quantities contained in the Proposal, payment will be made under the unit prices applicable to the work actually done in accordance with the actual amount of such work done. If such oral instructions decrease the quantities or amount of work, no payment will be made to the Contractor to compensate him for any loss of anticipated profit on the work omitted.

F. In the case of work performed by the Contractor pursuant to oral instructions involving a lump sum price contained in the Proposal, no additional compensation shall be paid. If any change involves a decrease in the amount of work to be performed, a suitable credit shall be given to the Owner for the work omitted. The amount of credit shall be determined from the breakdown of lump sum prices furnished by the Contractor under BASIS OF PAYMENT, or from other data which will substantiate the cost of work to be omitted.

G. If the Contractor proceeds with the performance of any work in accordance with oral instructions of the Engineer, it shall be conclusively presumed that the unit prices or lump sum prices stated in the Contractor's Proposal apply to such work and no additional or different compensation shall be paid.

H. If the Contractor does not concede that the unit prices or lump sum price in his Proposal should be applicable to any work required to be performed under oral instructions of the Engineer, he shall notify the Engineer that such unit prices or lump sum prices do not apply and, in such case, the oral instructions of the Engineer shall not be effective unless confirmed in writing as hereinabove provided.

I. The Contractor shall not vary in any manner from the Drawings and Specifications except with the written permission of the Engineer. All engineering analysis, review or redesign required, due to the Contractor's changes or proposed changes in construction from the clear intent of the Contract Plans and Specifications, shall be performed by the Engineer, or, at the Engineer's option, shall be performed by others and reviewed by the Engineer. The cost of either engineering service shall be computed at the Engineer's standard fee schedule, and shall be borne by the Contractor.

G26. EXTRA WORK

A. The Contractor shall perform extra work, for which there is no provision included in the Contract, whenever, to complete fully the Work as contemplated, it is deemed necessary or desirable by written direction of the Engineer, and such extra work shall be done in accordance with the Specifications therefor, or in the best workmanlike manner as directed. This extra work will be paid for at a unit price or lump sum to be agreed upon previously in writing by the Contractor and the Engineer, after approval in writing by the Owner.

B. The Owner, without invalidating the contract, may make changes by altering, adding to or deducting from the work, the contract sum being adjusted accordingly. All such work shall be executed in conformity with the terms and

conditions of the original contract, unless otherwise provided in the order for same. Any claim for extension of time caused thereby shall be adjusted at the time of ordering such change.

C. No instructions, either written or verbal shall be construed as an order for changes unless it be in the form of a Change Order, bearing the signed approval of the Owner and Engineer, and the signed acceptance of the Contractor, except in the case of disagreement as to value of changes, when the Contractor's signature to the orders will not be mandatory. Change Order shall describe or enumerate the work to be performed and state the price, if any, to be added to or deducted from the contract sum. If the nature of the work is such that a Change Order, as above, cannot be issued until the work has been advanced sufficiently to obtain exact quantities, said work will be authorized in writing by the Engineer, with the accompanying statement that a Change Order will be issued when the necessary information is at hand. The Owner may require that the Contractor provide unit prices prior to issuing a Change Order.

D. Except as provided in the above paragraph, no change shall be made, unless in pursuance of a Change Order, and no claim for an addition to the contract sum shall be valid unless so ordered. If the Contractor believes that any instructions, by drawing or otherwise, involves extra cost under his contract, he shall give the Engineer written notice thereof and await instructions before proceeding to execute such work.

E. The value of any change shall be determined by one or more of the following methods:

1. By prices specifically named in the specifications or proposals;

2. By acceptance of agreed unit prices based on estimated cost plus overhead and profit as applicable;

3. By an estimate of the actual cost of labor and material, cost to be determined as the work progresses but not to exceed a predetermined figure, to which overhead and profit may be added as defined in Paragraphs H(1) and H(2) below (i.e., - time and material with an upset limit on cost).

4. By actual cost of labor and materials, cost to be determined as the work progresses, to which overhead and profit may be added as defined in Paragraphs H(1) and H(2) below (i.e., - time and material with no upset limit on cost).

5. By the acceptance of lump sum price determined from an approved detailed estimate of cost.

The Engineer shall be the final authority on which pricing method will apply; however, when the proposal contains a unit price item for the item of work to be

performed, the value of the change will only be as determined by the unit price bid regardless of the quantity involved.

F. Overhead shall be defined as an allowance to compensate for all costs, charges and expenses, direct or indirect, except for the actual cost of labor and material as defined by Paragraph G. Overhead shall be considered to include, but not be limited to insurance (other than as mentioned in Paragraph G), bond or bonds, field and office supervisors and assistants above the level of foreman, use of small tools and minor equipment, incidental job burdens, general office expense, and the like.

G. Actual cost of labor and material shall be defined as the amount paid for the following items, to the extent determined reasonable and necessary:

1. Cost of materials delivered to the job site for incorporation into the contract work.

2. Wages paid to workmen and foremen and wage supplements paid to labor organizations in accordance with current labor agreements.

3. Premiums or taxes paid by the Contractor for workmen's compensation insurance, unemployment insurance, FICA tax and other payroll taxes as required by law, net of actual and anticipated refunds and rebates.

4. Sales taxes paid as required by law. (See also Information for Bidders to determine Owner’s tax exempt status).

5. Allowance for use of construction equipment (exclusive of hand tools and minor equipment), as approved for use by the Engineer. The rate on self-owned equipment used for periods of under one week will be the Associated Equipment Distributor's published monthly rate divided by 22 days to establish a daily rate and divided again by eight hours to establish an hourly rate. Equipment used for periods of 5 days or more will be billed at a rate equal to 45% of the published monthly rate. In the alternative, the Engineer may approve for reimbursement a rate representing the allocable costs of ownership. Self-owned equipment is defined to include equipment rented from controlled or affiliated companies. Rented equipment will be paid for at the actual rental cost. Gasoline, oil and grease required for operation and maintenance will be paid for at the actual cost. When, in the opinion of the Contractor, and as approved by the Engineer, suitable equipment is not available on the site, the moving of said equipment to and from the site will be paid for at actual cost.

6. When the material furnished is used material, its value shall be pro-rated to the value of new material, but should be no more than its cost. When, in the opinion of the Engineer, the salvage value of salvageable material furnished exceeds the cost of salvage, a suitable credit shall be given the Owner.

H. Regardless of the method used to determine the value of any change, the Contractor will be required to submit evidence satisfactory to the Engineer to substantiate each and every item that constitutes his proposal. The amounts allowed for overhead and profit shall not exceed the applicable percentages as established in the two following paragraphs:

1. If the work is done directly by the Contractor, overhead in an amount not to exceed ten (10) percent may be added if Method E(3) or E(4) is used, and to the cost of the labor and materials plus overhead there may be added up to ten (10) percent for profit. The percentages for overhead and profit should vary according to the nature, extent and complexity of the work involved, but in no case shall exceed the percentages set forth in this paragraph. No percentages for overhead and profit will be allowed on the premium portion of overtime pay.

2. If the work is done by a subcontractor, the subcontractor's overhead in the amount not to exceed five (5) percent may be added to the cost of labor and materials if Methods E (3) or E (4) is used and to the cost of labor and materials plus overhead there may be added up to ten (10) percent for the contractor's combined overhead and profit. No percentage for overhead and profit will be allowed on the premium portion of overtime pay.

I. When in the judgment of the Engineer an emergency exists, the Engineer shall have the authority to order such extra work as is required to meet the emergency. The Engineer will report to the Owner the existence of the emergency and the extra work necessitated thereby within twenty-four (24) hours after the extra work pursuant to the emergency has been ordered. The Owner may then make a decision as to the continuation of the emergency work and may approve or disapprove the completion of the extra work ordered pursuant thereto and the Owner's decision shall be final in the matter. In the event the Owner disapproves completion of said emergency work, the Contractor will be paid for such work as has been performed prior to receipt of notice to discontinue the same. Payment for the work performed will be on the basis described in E4.

J. The Engineer will certify to the Owner the amount and value of the extra work and the Contractor shall furnish to the Engineer such itemized statements of the cost of the extra work as the Engineer requires and shall give the Engineer access to all accounts, bills and vouchers relating thereto.

K. No order for extra work, nor the doing of any extra work, at any time or place, shall in any manner or extent relieve the Contractor or the Surety on his bond or bonds from any of their obligations under the Contract Documents. All extra work orders being given and all extra work being done, under and in accordance with the Contract, are to be considered a part of the same and subject to each and every one of the terms and requirements of the Contract Documents, and fully covered by the bond or bonds furnished by the Contractor.

L. It shall not constitute extra work entitling the Contractor to additional compensation if the Engineer shall order changes or increases in plant or personnel to maintain the scheduled rate of progress in the Work to be done under the Contract. Approval by the Engineer of materials or equipment substituted by the Contractor for those specified shall likewise not constitute extra work.

M. The form of change orders will generally follow that as exemplified in the Contract Forms.

N. Payment for completed work encompassed in change orders will be made to the Contractor when the change order has been formally approved by the Owner.

G27. CLAIMS AND DISPUTES

A. Should the Contractor be of the opinion, at any time or times, that he is entitled to any additional compensation whatsoever over and above the compensation stipulated in these Contract Documents, for damages, losses, costs, and/or expenses alleged to have been sustained, suffered, or incurred by him in connection with the Project, he shall, in each instance, within five (5) days after such alleged damages, losses, costs, and/or expenses shall have been sustained, suffered, or incurred, make a written claim therefor to the Engineer or Owner. On or before the fifteenth (15th) day of the calendar month succeeding that in which such damages, losses, costs, and/or expenses shall have been sustained, suffered or incurred, the Contractor shall file with the Engineer or Owner a written itemized statement of the details and amount of such claim of damage, loss, cost and/or expense, and unless such claim and statement shall be thus made and filed, in each such instance, the Contractor's claim for such additional compensation shall be held and taken to be absolutely invalidated, and he shall not be entitled to any compensation on account of such alleged damages, loss, cost and/or expense.

B. The Contractor shall produce for the Owner's examination, upon notice from the Owner, all his books of account, bills, invoices, payrolls, subcontracts, time books, progress records, daily reports, bank deposit books, bank statements, checkbooks and cancelled checks, showing all of his actions and transactions in connection with or relating to or arising by reason of his claim, and submit himself and persons in his employment and in his subcontractors' employment for examination under oath by any person designated by the Owner to investigate any claims made against the Owner under the Contract, such examination to be made at the offices of the Contractor. Any claims which cannot be settled among the aforementioned parties shall be determined in a court of competent jurisdiction with no arbitration permitted, unless so desired by the Owner.

C. The Contractor shall proceed diligently, pending and subsequent to the determination of the Owner with respect to any such disputed matter, with the performance of the Contract and in accordance with all instructions of the Owner and the Engineer. The Contractor is advised and acknowledges that extensive time may be required to review, discuss, confirm and process claims. Likewise,

the Contractor is not entitled to stop all or any portion of the Work pending the resolution of claims.

D. No person has power to waive or modify any of the foregoing provisions, and in any action against the Owner to recover any sum in excess of the sum certified by the Owner to be due under or by reason of the Contract, the Contractor must allege in his complaint and prove at the trial, compliance with the provisions of this Article.

E. Nothing in this Article shall in any way affect the Owner's right to obtain an examination before trial or a discovery and inspection in any action that might be instituted by or against the Owner or the Contractor.

F. The provisions of this Article shall constitute a condition precedent to the right of the Contractor to institute litigation to recover money damages from the Owner.

G28. CHANGES NOT TO AFFECT BOND

A. It is distinctly agreed and understood that any changes made in Plans and Specifications for the Work, whether such changes increase or decrease the amount thereof, or any change in the manner or time of payments made by the Owner to the Contractor shall in no way annul, release or affect the liability of the Contractor or the surety on the bond or bonds given by the Contractor.

G29. MEASUREMENT

A. Unless specifically stated in detail in the Specifications, no extra measurements or customary measurements of any kind shall be allowed in measuring the Work, but only the actual lengths, areas, solid contents, number or weights, as required by terms of the Contract Documents shall be considered.

G30. BASIS OF PAYMENT

A. The Owner will pay, and the Contractor shall accept, the unit and/or the lump sum prices stipulated in the Proposal attached hereto as full compensation for furnishing all materials, and for doing all Work contemplated and specified in the Contract Documents. The prices shall cover the cost of all plant and tools and of all labor and materials, together with all expenses of moving and shipping equipment, as well as all royalties for patents, patented articles, material, appliances, processes, compositions, combinations, means, and things of whatever kind that shall be furnished or needed, to complete the entire Work in all details ready for the purpose for which it is intended.

B. On lump sum items, or lump sum contracts, the Contractor shall submit to the Engineer for approval prior to the start of work under the Contract, a schedule showing a breakdown of the labor, materials, and equipment and other costs used in the preparation of the bid. This shall be in sufficient detail to indicate separate figures for excavation, concrete, reinforcing steel, equipment and all

other items making up the lump sum price. Cost breakdown shall be separately itemized for each structure in the Project. Where the cost breakdown includes items for Bond Payment, Job Set-Up, or Job Mobilization, these items will be paid for at 25% each for the first four months for which payment is otherwise due. This schedule shall be used in computing the periodic estimate which is issued monthly and as a basis for negotiations concerning any credits which may arise during the execution of the Project.

C. Refer to Sections 01150 and other applicable sections of the specifications for additional requirements relative to measurement and payment.

G31. PARTIAL PAYMENTS

During the progress of the Work, payments will be made as follows:

A. The Engineer, in consultation with the Contractor, will within the first ten days of each month, estimate the amount of work done and materials and equipment built into the Work during the previous calendar month. The quantities so determined will be used as the basis for a periodic estimate whenever the value of said monthly work exceeds one thousand ($1,000.00) dollars and shall indicate the value of the work performed and materials and equipment built into the Work in accordance with the Contract. As soon as practicable thereafter, the Owner will pay the Contractor an amount equal to ninety percent (90%) of the value of such work, materials and equipment indicated on the periodic estimate, less the amount of all previous payments. The remaining ten percent (10%) shall be deducted from each and every estimate made under the entire Contract, and shall be retained until such time as stipulated in Articles G31-G33.

B. The monthly estimate of the Engineer will be approximate and no claim shall be made by the Contractor for additional payments based on any error in any periodic estimate.

C. Payment may at any time be withheld if the Work is not proceeding in accordance with the Contract, or if, in the judgement of the Engineer, the Contractor is not complying with the requirements of the Contract Documents.

D. All work covered by partial payment made shall thereupon become the sole property of the Owner but this provision shall not be construed as relieving the Contractor of the sole responsibility for the care and protection of the work upon which payments have been made or the restoration of any damaged work, or as a waiver of the right of the Owner to require the fulfillment of all items of the Contract Documents.

E. The Contractor may receive compensation for materials delivered to the site provided:

1. A cancelled check or an original of a paid bill from the supplier is submitted to the Engineer indicating that the Contractor has paid the supplier for the material or equipment.

2. The material or piece of equipment is properly stored and protected from the elements and/or vandalism. The Engineer is afforded the ability to inspect the material or piece of equipment.

3. A bill is delivered to the Engineer at the time of delivery itemizing the subject material or equipment. Payment will be made for on-site material and/or equipment in the amount of 70% of the gross amount of the paid invoice. This payment will be subject to the normal retainage of the partial estimate.

4. The Engineer has agreed to the pre-purchasing of the materials.

G32. SUBSTANTIAL AND FINAL CERTIFICATES

A. Upon substantial completion of the Work, and acceptance thereof by the Engineer and the Owner, and as soon thereafter as practicable, the Engineer will prepare a Certificate of Substantial Completion, which will indicate the value of work performed and materials and equipment furnished, and the exact aggregate amount of the compensation to which the Contractor will become entitled under the terms of the Contract.

B. Attached to the Certificate of Substantial Completion will be a punch list. The Engineer will calculate and itemize, in the Certificate of Substantial Completion, either (a) the sum of money which, in the Engineer's opinion, would be necessary to expend if the Owner were to contract with others for the final completion of the work and satisfaction of all punch list items; or (b) the sum of money represented in the Contractor's bid schedule for the punch list items; whichever is greater.

C. This punch list shall not be considered all inclusive and any outstanding contract requirements discovered by the Owner or the Engineer shall be repaired, replaced, and corrected prior to the Final Inspection. The Engineer shall provide written notice of such additional outstanding work items.

D. The Certificate of Substantial Completion will be submitted to the Owner and a copy furnished to the Contractor. Upon approval of the Certificate of Substantial Completion by Owner, and as soon as practicable thereafter, the Owner will pay to the Contractor an amount equal to one hundred percent (100%) of the total compensation to which the Contractor is entitled for the performance of the Contract, less the amount of previous payments, less the sum as stipulated under B. above for remaining punch list work and retainage as stipulated hereinbefore.

E. Upon issuance of the Certificate of Substantial Completion, the one-year guarantee period shall commence for all work other than items represented on the punch list. The one-year guarantee period for punch list items will begin upon issuance of the Final Certificate.

F. Upon final completion of the Work in accordance with the Contract and acceptance thereof by the Engineer and the Owner, and as soon thereafter as

practicable, the Engineer will prepare a Final Certificate which will indicate the value of the work performed and materials and equipment furnished, and exact aggregate amount of the compensation to which the Contractor will become entitled under the terms of this Contract.

G. The Final Certificate will be submitted to the Owner and a copy furnished to the Contractor. Upon approval of the Final Certificate by the Owner, and as soon as practicable thereafter, the Owner will pay the Contractor an amount equal to one hundred percent (100%) of the total compensation to which the Contractor is entitled for the performance of the Contract, less the amount of all previous payments and 50% of the total retainage. The Performance and Labor and Material Bonds and 50% of the total retainage will be retained for one year from the date of final completion, as determined by the Engineer as a guarantee against defects of materials, equipment, workmanship or other Contract performance and shall remain in full force and effect until released in writing by the Engineer or other representatives of the Owner.

H. Negotiable bearer bonds, if utilized and accepted by Owner in lieu of the remaining 50% of total retainage, may be submitted by the Contractor.

G33. ACCEPTANCE OF FINAL CERTIFICATE

A. The Contractor shall be conclusively deemed to have accepted the Final Certificate as a correct statement of the total liability of the Owner and of the compensation paid and to be paid to the Contractor by the Owner unless within seven (7) days after delivery of his copy of the Final Certificate to him, the Contractor shall return such copy to the Owner together with a statement of his objections to such certificate and of any claim for damages or compensation in excess of the amounts shown on the Certificate. The acceptance by the Contractor of the Final Certificate approved by the Owner shall constitute a release and shall discharge the Owner from all further claims by the Contractor arising out of or relating to the Contract.

G34. RELEASE OF RETAINAGE AND REINSPECTION OF WORK

A. Retainage will be released in accordance with Articles G31 through G33 hereinbefore.

B. Within one (1) year after the date of final completion as determined by the Engineer, the Owner may make, or cause to be made, a reinspection of the Work. If the Work is found satisfactory and in accordance with the Contract Documents, the Owner will approve the termination of the Contract.

C. In the event the inspection discloses the existence of defects in the materials, equipment, or workmanship or other noncompliances with the Contract Documents, the Contractor shall be required to immediately make good and rectify all defects. Any item of equipment which has failed to maintain the performance or other salient requirements of these specifications, shows undue wear, or other deleterious effects, will be considered defective. If the Contractor

shall fail or neglect to satisfy the requirements of the Owner with respect to making the necessary corrections, then the Owner may proceed to have the Work executed by others and the cost and expense thereof will be borne by the Contractor and his Sureties. Correction of defects and noncompliance and payment for such by the Contractor or his Sureties shall terminate the Contract and release all parties hereunder subject to INSPECTION AND CORRECTION OF WORK.

G35. SCOPE OF PAYMENTS

A. The Contractor shall receive and accept the compensation as herein provided, in full payment for (1) furnishing all materials, labor, tools, and equipment, (2) performing all Work contemplated and embraced under the Contract, (3) all loss or damage arising out of the nature of the Work, or from the action of the elements, or from any unforeseen difficulties or obstructions which may arise or be encountered during the prosecution of the Work, (4) all risks of every description connected with the prosecution of the Work, until its final acceptance by the Owner, (5) all expenses incurred by, or in consequence of, the suspension or discontinuance of the said prosecution of the Work as herein specified, (6) all actual or alleged infringements of patent, trademark, or copyright, and (7) for completing the Work and the whole hereof, in an acceptable manner, according to the Plans, Specifications, and other Contract Documents. The payment of any partial or final estimate shall in no way or in no degree prejudice or affect the obligation of the Contractor, at his own cost and expense, to renew or replace all defects and imperfections, or damages. The Engineer shall be the sole judge, and the said Contractor shall be liable to the Owner for failure so to do.

G36. RIGHT TO WITHHOLD PAYMENTS

A. The Owner may withhold from the Contractor so much of any approved payments due him as may in the judgement of the Owner be necessary:

1. To assure the payment of any lien, stop work notice or claim filed with the Owner for work, labor or materials, done, performed, or delivered and used in the prosecution of the Work herein provided for (whether in strictly legal form or otherwise);

2. To protect the Owner from loss due to defective work not remedied or through any improper or defective machinery, implements or appliances used by the Contractor or for failure of the Contractor to fully comply with all requirements of the Contract; or

3. To protect the Owner from loss due to injury to persons or damage to the work or property of other contractors, subcontractors, or others, caused by the act or neglect of the Contractor or any of his subcontractors.

B. The Owner shall have the right as agent for the Contractor to apply any amounts so withheld in such manner as it may deem proper to satisfy such claims or to

secure such protection. Such application of such money shall be deemed payments for the account of the Contractor.

C. Before release to the Contractor of any funds retained under this provision, the Contractor shall furnish satisfactory written evidence to the Owner that the claim or claims have been fully paid or satisfied.

G37. RELEASE OF LIENS

A. Neither the final payment nor any part of the retained percentage shall become due until the Contractor shall deliver to the Owner, a complete release of all liens arising out of his work, or subcontractor's work or in lieu thereof, receipts in full and an affidavit showing that so far as he has knowledge or information the releases and receipts include all labor and materials for which a lien could be fulfilled; if any subcontractor refused to furnish a release or receipt in full, the Contractor may furnish a bond satisfactory to the Owner to indemnify the Owner against any lien. If any lien remains unsatisfied after all payments are made, the Contractor shall refund to the Owner, all monies that the latter may be compelled to pay in discharging the lien, including all costs and reasonable attorney's fees.

B. The Contractor shall indemnify and hold the Owner and Engineer harmless from all liens, or claims of rights to enforce liens, against the tract or the improvements arising out of any work to be performed or labor or materials to be furnished under this Agreement. Neither final payment by the Owner nor acceptance of the Work shall constitute a waiver of this indemnity, and if any lien or claim shall at any time be filled, the Contractor shall refund to the Owner all monies the Owner may be compelled to pay in discharging the lien, including all costs and reasonable attorney's fees.

G38. RIGHT TO USE WORK

A. The Owner may enter upon and use the whole or any portion of the Work which may be in condition to use at any time previous to its final acceptance by the Owner. Such use shall not constitute or be evidence of acceptance by the Owner or the Engineer of the whole or any part of the material or equipment furnished or work performed under this Contract.

G39. NOTICE OF WARNING AND STOP WORK ORDER

A. If the Contractor shall fail to make prompt payment to persons supplying labor, materials, or equipment for the Work, or refuse or fail to supply enough properly skilled workmen, or proper materials, or refuse or fail to prosecute the Work or any part hereof in accordance with the Contract Documents with such diligence as will insure its completion within the period specified (or any duly authorized extension thereof), or fail to complete the Work within said period, or fail or refuse to comply with laws, ordinances, codes, and instructions of the Engineer, then the Engineer may forward by registered or certified mail to the Contractor, at the address given in the Contract, a Notice of Warning, and in the event the

Contractor fails to comply with said Notice of Warning within five (5) days from receipt thereof, the Owner shall have the right to terminate the Contract.

B. In the event a Stop Work Order is issued, the Contractor shall coordinate with the Engineer to determine and remedy the situation for which the Stop Work Order is issued. Irrespective of any conditions indicating that the Contractor has or has not created just cause for the Engineer to issue a Stop Work Order, it shall be conclusively understood and agreed that a minimum of two (2) working days shall elapse without any claim for loss on the part of the Contractor during that two (2) working day period. If the duration of the Stop Work Order exceeds two (2) working days, and the Contractor wishes to file claim for costs incurred, he may so file, subject to the conditions of the section designated CLAIMS AND DISPUTES, however such claim shall specifically exclude the aforementioned two (2) working day period.

C. Nothing in the foregoing shall be construed to mean that the Contractor is entitled to a claim for losses incurred after the two (2) working day period has elapsed. Rather, the meaning is simply that there can be no claim for losses incurred during the two (2) working day period.

D. The requirements and conditions of this Article apply to each and every Notice of Warning and/or Stop Work Order issued throughout the course of the Work.

G40. GUARANTEE PERIOD

A. If, at any time during the guarantee period, any portion of the Work shall, in the opinion of the Engineer, and/or the Owner, require repairing, replacing, or rebuilding, the Contractor shall start such repairs within five (5) days after the receipt of notice from the Owner, and if the Contractor shall fail or neglect to start such repairs within the said five (5) days, the Owner may employ such other person or persons as it may deem proper to make such repairs and pay the costs thereof out of any sum retained from the Contract, provided nothing herein contained shall limit the liability of the Contractor or his Surety to the Owner for nonperformance of the Contractor's obligation at any time.

B. The guarantee period shall commence upon acceptance of the Certificate of Substantial Completion and the Final Certificate, as specified herein.

G41. TERMINATION OF CONTRACT

The Owner may terminate the contract if:

A. The Contractor shall be adjudged bankrupt or make an assignment for the benefit of creditors; or

B. A receiver or liquidator shall be appointed for the Contractor or for any of his property and shall not be dismissed within twenty (20) days after such appointment, or the proceedings in connection therewith shall not be stayed on appeal within the said twenty (20) days; or

C. The Contractor shall abandon the Work; or

D. The Contractor shall fail to make prompt payments to persons supplying labor, materials or equipment for the Work after Notice of Warning from the Engineer; or

E. The Contractor shall refuse or fail, after Notice of Warning from the Engineer, to supply enough properly skilled workmen or proper materials or proper workmanship, or shall unnecessarily or unreasonably delay the Work; or

F. The Contractor shall refuse or fail after Notice of Warning from the Engineer to prosecute the Work or any part thereof in accordance with the Contract Documents; or

G. The Contractor shall refuse or fail after Notice of Warning from the Engineer to prosecute the Work or any part thereof with such diligence as will insure its completion within the period herein specified (or any duly authorized extension thereof) or shall fail to complete the Work within said period; or

H. The Contractor shall fail or refuse after Notice of Warning from the Engineer to comply with laws, ordinances, codes or the instructions of the Engineer or otherwise be guilty of a substantial violation of any provision of the Contract.

Then, and in any such event, the Owner without prejudice to any other rights or remedy it may have, may by seven (7) days' notice to the Contractor terminate the employment of the Contractor and his right to proceed, either as to the entire Work, or, at the option of the Owner, as to any portion thereof as to which delay shall have occurred, and may take possession of the Work and such materials and supplies as may be on the site of the Work and may complete the Work by contract or otherwise, as the Owner may deem expedient. In such case, the Contractor shall not be entitled to receive further payment until the Work is finished. If the unpaid balance of the compensation to be paid the Contractor hereunder shall exceed the expense of so completing the Work (including compensation for additional managerial, administrative, engineering and inspection services and all damages for delay), such excess will be paid to the Contractor. If such expense shall exceed such unpaid balance, the Contractor and his Sureties shall be liable to the Owner for such excess.

G42. PATENT RIGHTS

A. The Contractor shall be responsible for all fees and licenses for all patented inventions or private contrivances, articles, or arrangements that may be used upon, or in connection with all or any part or division of the Project, during construction, erection, operation or maintenance, and the Owner shall be protected and held harmless by the Contractor against all demands for such fees or claims. The Contractor shall further defend the Owner, Engineer, and all other agents against all suits which may be brought by reason of any claim, or claims, for damages arising out of alleged patent infringement or similar claims.

G43. PERMITS

A. The Contractor's attention is directed to all phases of the Work wherein the authority for permits or licenses is vested in private companies, corporations or in federal, state, county or municipal agencies. He shall familiarize himself with the procedure in securing such permits or licenses and approvals as are necessary, accept full responsibility for obtaining the same, and comply with the stipulations contained therein. Unless otherwise specified, the Contractor is required to pay the cost and expense of securing the permits and licenses and all other costs connected therewith. The Contractor will not be required to pay for permits issued by the Owner, or his agents. The Owner will cooperate with the Contractor to the extent reasonably required to facilitate obtaining permits and approvals.

G44. LAWS AND ORDINANCES

A. In the execution of the Contract, the Contractor shall observe and obey all federal, state, county and local laws, ordinances, codes and regulations relating to the performance of the Contract, including, but not limited to, labor employed thereon, materials supplied, obstructing streets and highways, maintaining signals, storing, handling and use of explosives and all other general ordinances and state statutes affecting him or his employees or his work hereunder in his relations with the Owner or any other persons, and also all laws, codes and ordinances controlling or limiting the Contractor while engaged in executing the Work under the Contract.

B. As a condition of the Contract, the Contractor shall and does hereby agree to comply with all requirements of the labor laws and other laws of the state in which the Work is being executed.

G45. LIABILITY OF CONTRACTOR

A. Whenever the Contractor is required by existing state, federal, local, and/or municipal laws, ordinances, rules or regulations, or by any state, federal, local, and/or municipal laws, ordinances, rules or regulations that may be enacted hereafter pertaining to the Work to be done under this Contract, to secure any permits or licenses to carry on any operation or operations in connection with the performance of this Contract and/or to act under the direction or supervision of the Owner, official, and/or employee, in connection with any such operation or operations, the Contractor shall be solely liable for all suits, actions, costs and damages of every kind and description resulting or which may result, directly or indirectly, from any such operation or operations, and shall indemnify and save harmless the Owner and Engineer from all suits, actions, costs and damages of every kind and description arising or which may arise, directly or indirectly, from the said operation or operations.

G46. SUBSTITUTE BOND

A. If, at any time, the Contractor's Surety or Sureties, or the carriers of the insurance herein specified to be written, become insolvent, or, in a reasonable judgement of the Owner, become unsafe or unsound, then upon five (5) days' written notice from the Owner to the Contractor, the Contractor shall substitute such Surety or insurance carrier with other surety or carrier as shall be satisfactory to the Owner. All additional premiums caused by such substitution shall be paid for by the Contractor, without additional compensation therefor.

G47. NO WAIVER

A. Neither the inspection by the Owner or Engineer, or any of their employees, nor any order, measurement or certificate by the Engineer, nor any order by the Owner for the payment of any money, nor any payment for, or acceptance of the whole or part of the Work by the Engineer or the Owner, nor any extension of time, nor any possession taken by the Owner or its employees, shall operate as a waiver of any provision of the Contract, or of any power herein reserved to the Owner, or any right to damages herein provided; nor shall any waiver of any breach of the Contract constitute a waiver of any other or subsequent breach. Each remedy provided in the Contract shall be construed as cumulative, that is, in addition to each and every other remedy herein provided.

C. No modifications of the Contract or waiver of any of its terms or provisions, except as herein provided, shall be made by or on behalf of the Owner, excepting by a resolution duly adopted by said Owner, and duly entered in the Owner's official minutes.

G48. NO LIMITATION OF LIABILITY

A. It is understood and agreed that all of the duties, liabilities, and/or obligations imposed upon or assumed by the Contractor and the Surety, or either of them, by or under the Contract Documents, shall be taken and construed to be cumulative and that the mention of any specific duty, liability, or obligation imposed upon or assumed by the Contractor and/or Surety under the Contract Documents shall not be taken or construed as a limitation or restriction imposed upon or assumed by the Contractor and/or the Surety by or under the Contract Documents.

G49. LEGAL ADDRESS

A. The address given in the Bid Form upon which the Contract is founded is hereby designated as the place where notices, letters, and other communications to the Contractor shall be mailed or delivered. The delivery at the above named place, or the depositing in a post-paid wrapper directed to the above place, in any post office box, regularly maintained by the United States Postal Service, of any notice, letter or other communication to the Contractor shall be deemed a sufficient delivery thereof to the Contractor. Such address may be changed at any time by an instrument in writing, executed and acknowledged by the Contractor, and delivered to the Owner. Nothing herein contained shall be deemed to preclude or

render inoperative the delivery of any notice, letter, or other communication to the Contractor personally.

B. Bidder must provide a street address in their proposal. No bids will be accepted with only a post office box.

G50. EXCESS COST OF ENGINEERING, INSPECTION AND TESTING

A. Owner will charge to Contractor and will deduct from the partial and final payments for the Work all excess engineering, inspection and testing charges incurred by Owner in connection with the following:

1. Services and other similar charges required as a result of Contractor's and subcontractor's errors, omissions or failure to conform to the requirements of the Contract Documents.

2. Services required to examine and evaluate any changes or alternates proposed by Contractor solely for the convenience of the Contractor.

3. Services as a result of Contractor's proposed substitution of materials or equipment.

4. Services as a result of changes by Contractor in dimensions, weights, power requirements, etc., of the equipment, materials, and accessories furnished.

5. Services for the review of resubmissions of previously "approved" (no exception taken) or "approved as noted" (furnish as corrected) shop drawings.

6. Services for the review of shop drawings submitted more than three (3) times for the same portion of the Work, item or equipment.

7. Testing Laboratory charges and engineering and inspection expenses in connection with any overtime work.

8. Services as a result of Contractor not completing the Work within the specified time.

9. Services as a result of Contractor working overtime. Overtime work means work beyond 8 hours per day, beyond 40 hours per week, and on Saturdays, Sundays and legal state or federal holidays.

10. All charges to Contractor by Owner will be at actual cost invoiced to Owner. Owner will provide Contractor with copies of all bills and invoices to substantiate the charges to Contractor.

G51. "AS-BUILT" DRAWINGS

A. The Contractor shall keep accurate records of all deviations of his work (locations, elevations, dimensions, substitutions, etc.) from that shown on the Drawings and Specifications, and indicate the actual construction with red lines and notes on a set of the agency approved drawings. These records shall be made kept correct as the construction progresses.

B. At the 90% completion of the project, the Contractor shall turn over a copy of the set of drawings to the Engineer signed and sealed by a licensed land surveyor as an aid for the Engineer's preparation of "As-Built Drawings". The Contractor shall complete the mark up of the drawings and submit the final set of changes to the Engineer at the 100% completion of the project.

G52. MAINTENANCE OF SUBSTANCE ABUSE/DRUG-FREE ENVIRONMENT

A. The Contractor shall establish and maintain a project environment that is free from the effects of substance abuse. This policy is designed to protect property, equipment, and operations and the safety of the Contractors and sub-contractors personnel and also the personnel of the Owner and Engineer present at the site. A drug-free workplace shall be maintained at all times during the duration of this Contract.

B. Contractor and sub-contractor employees shall not be under the influence of any substance including drugs, legal or illegal, which adversely affects their ability to perform their duties in any way.

C. The unlawful manufacture, distribution, dispensation, possession, or use of a controlled substance on the project site is absolutely prohibited.

D. Maintenance of Substance Abuse/Drug-Free Environment during all phases of the project shall be the responsibility of the Contractor.

G53. PROVISIONS REQUIRED BY LAW DEEMED INSERTED

A. Each and every provision of law and clause required by law to be inserted in the Contract shall be deemed to be inserted herein and the Contract shall be read and enforced as though it were included herein, and if through mistake or otherwise any such provision is not inserted, or is not correctly inserted, then upon the application of either party, the Contractor shall forthwith be physically amended to make such insertion.

B. If the Contract contains any unlawful provisions not an essential part of the general structure of the Contract and which shall not appear to have been a controlling or material inducement in the making thereof, the same shall be deemed stricken from the Contract without affecting the binding force of the remainder.

G54. COMPENSATION

A. Unless otherwise specified, all items of cost required to fulfill the General Conditions and the various provisions of the Technical Specifications of the Contract so as to result in a complete operable system shall be included in the price or prices bid in the Proposal for the Contract upon which a bid is being submitted.

THIS PAGE WAS INTENTIONALLY LEFT BLANK

PART 1 - GENERAL

1.01 DESCRIPTION

A. The purpose of this Section is to generally describe the format in which the Specifications are prepared. This Section shall be considered only as a supplementary aid to the Contractor, presented for purposes of aiding comprehension of the Specifications.

1.02 GENERAL FORMAT

A. The Specifications, and particularly the technical sections, are arranged generally according to the Construction Specifications Institute (CSI) format.

B. Most legal, administrative, and related requirements are specified in the Instructions to Bidders, Proposal Forms, Contract Forms and Bonds and the General Conditions.

C. Most technical and construction related requirements are specified in the technical sections, which are grouped into sixteen (16) major divisions according to trade or type of work. All sixteen major divisions are not utilized on any particular contract.

D. Technical sections are arranged in numerical order, however section numbers will not be consecutive from section to section. Page numbering is subordinate to each section.

E. Most sections are generally broken down into three (3) parts:

1. PART 1 – GENERAL

2. PART 2 – PRODUCTS

3. PART 3 - EXECUTION

All three (3) parts may not always be utilized, and in some cases the titles of some parts is other than the three (3) above mentioned titles.

F. Paragraph designations are subordinate to each part.

G. The Contractor is advised that the format described hereinabove is general and flexible in nature. There is some overlapping of specified information between the various portions of the Specifications. In all cases, the entire requirements of the Contract Documents, as a whole, shall apply.

1.03 EXPLANATIONS

A. Descriptions - Many technical sections begin with a paragraph entitled "DESCRIPTION", or similar wording. In such paragraphs, a brief description of the work generally specified in that Section is presented. These descriptions shall not be construed to be all-inclusive, but merely brief general descriptions, as noted above, presented for purposes of aiding the location of particular subject matter in the Specifications. Again, all requirements of the entire Contract Documents apply, whether specifically mentioned in said descriptions or not.

B. Related Work Specified Elsewhere - Some technical sections include a paragraph which lists some of the related work specified elsewhere in the Contract Documents. Such listings and enumerations are not meant to be all-inclusive, rather, they are merely presented as a means of aiding the Contractor in locating some of the other Specification sections wherein work is specified which has a particularly close interrelationship with the work specified in that Section. It shall be clearly understood that all of the Work, and all of the Specifications sections and other portions of the Contract Documents, are interrelated, and that total of all requirements set forth in all of the Contract Documents shall be met.

C. The imperative sense is utilized, in as much as is practical in these Specifications. It shall be understood that all imperative statements made in the Contract Documents apply to the Contractor, upon whom the requirements of such statements are imposed.

PART 2 - PRODUCTS
(NOT UTILIZED)

PART 3 - EXECUTION
(NOT UTILIZED)

END OF SECTION

PART 1 - GENERAL

1.01 PROJECT/WORK IDENTIFICATION:

A. Contract Documents: Indicate the work of the Contract and related requirements and conditions that have an impact on the project.

B. Summary of References: Work of the Contract can be summarized by references to the Advertisement, Instructions to Bidders, Proposal Forms, Contract, Bonds, General Conditions, Technical Specification Sections, Drawings, addenda and modifications to the contract documents issued subsequent to the initial printing of this project manual and including but not necessarily limited to printed material referenced by any of these. It is recognized that work of the contract is also unavoidably affected or influenced by governing regulations, natural phenomenon including weather conditions and other forces outside the contract documents.

C. Abbreviated Written Summary: Briefly and without force and effect upon the contract documents, items of work of the Contract can be summarized as follows: (This listing is not to be considered as a complete listing of all items in this contract.)

1. General Construction – Site Work

a. Clear and rough grade the site of the STP within the project limits as shown on the Drawings.

b. Furnish and install temporary fencing around the STP area of the site.

c. Excavate for influent concrete box, equalization tank, BESST tank, equalization tank and control building foundations, and generator and odor control slabs. Provide for permit acquisition, dewatering and lawful disposal of water removed from excavations as required for the proper installation of below grade structures and tanks. Excavate for trenching for additional outfall sewer piping for STP discharge.

d. Furnish and install reinforced concrete tank slabs and control building footings.

e. Backfill and compact to 95% optimum density around below grade concrete structures, treatment and sludge holding tanks.

f. Place STP Control Building, complete as shown on the

Architectural Drawings by Granoff Architects, including odor control system.

g. Furnish and install below grade precast concrete structures including influent concrete constant head box, flow meter vault, and flow meter sanitary manhole.

h. Furnish and install all influent and effluent below grade piping including waste sewer piping from the STP control building.

i. Furnish and install 1/4" pea gravel over balance of treatment area and provide pavement to limits of fence lines.

j. Backfill, grade and compact around all structures.

k. Furnish and install perimeter chain link fencing with double entrance gates.

l. Install Bituminous Asphalt entrance driveway.

m. Furnish and install 1" PVC water service to Control Building from water main. Furnish and install RPZ valve in control building in accordance with Westchester County Department of Health (WCDH) and any and all regulatory agencies' rules and regulations.

2. Mechanical Work

a. Furnish and install factory fabricated BESST below grade Sewage Treatment Plant complete with treatment and sludge holding tank and an Equalization Tank including hold down straps, interior piping, valves fittings, pumps and Process Control Panels and Lighting Arresting System.

b. Furnish and install all influent and effluent sanitary sewer and potable water piping, valves and fittings.

c. Furnish two (2) explosion proof, non-clog submersible Goulds influent submersible sewage pumps with level and alarm controls.

d. Furnish and install type 316 stainless steel lifting rails, chains and hoist for each influent sewage pump.

e. Furnish and install influent concrete constant head box complete with type 316 stainless steel V notches, broad crested weirs, and baffles.

f. Furnish and install influent pump piping, valves, fittings and supports.

g. Furnish and install odor control system, slab, and associated piping, fittings, and valves.

h. Furnish and install effluent flow meter in a precast concrete vault, piping, valves and fittings.

i. Furnish and install blowers with VFD control in precast control building and associated piping, valves, and fittings.

j. Furnish and install lab bench with lab sink and all required sanitary and hot and cold water supply piping. Provide and wire commercial hot water heater.

k. Furnish and install emergency eye wash and shower with floor drain.

l. Furnish and install fire exhauster(s).

m. Furnish and install required laboratory equipment as per WCDH requirements

n. Furnish and install all mechanical hardware of type 316 stainless steel, where applicable.

3. Electrical Work

a. Furnish and install new secondary underground electrical services.

b. Furnish and install stand-by generator set complete with weatherproof and sound proof enclosure and residential grade silencer.

c. Furnish and install meter pan, main fused disconnect switch and automatic transfer switch.

d. Furnish and install NEMA 12 Main Distribution Panel, Lighting Panel and Pump Station Control Panel.

e. Install BESST sewage treatment plant Control Panels, including lightning protection system. Furnish and install all power wiring, control and alarm wiring as required by the BESST STP manufacturers specifications to result in a complete operable BESST system with surge protection.

f. Install equalization tank Control Panels, including lightning protection system. Furnish and install all power wiring, control and alarm wiring as required by the equalization tank manufacturers specifications with surge protection.

g. Furnish and install STP control building power and control wiring, including lighting fixtures, outlets, conduits, fitting conductors, etc.

h. Furnish and install STP control building exhaust fan.

i. Furnish and install electrical unit heater with thermostatic controls per plan.

j. Furnish and install below grade telephone conduit complete with pull wires and circuit wiring for control building telephone and remote dialer.

k. Furnish and install remoter dialer.

l. Furnish and install lightning arrester system.

m. Furnish and install exterior flood light system with photo cell.

1.02 USE OF THE SITE:

A. General: Confine operations at the site to the areas permitted under the Contract. Portions of the site beyond areas on which work is indicated are not to be disturbed. Conform to site rules and regulations affecting the work while engaged in project construction.

1. Coordinate work performed for the sewage treatment plant construction with possible other construction being performed on other areas of this site.

2. Do not unreasonably encumber the site with materials or equipment. Confine stockpiling of materials to an area adjacent to the proposed sewage treatment plant and within a protective fenced-in area.

3. Lock automotive type vehicles, such as passenger cars and trucks and other mechanized or motorized construction equipment, when parked and unattended, so as to prevent unauthorized use. Do not leave such vehicles or equipment unattended with the motor running or the ignition key in place.

4. Do not block entrance roadways to the project site.

5. All buildings, pits or pipe lines under construction shall be properly secured at the end of the work day by the installation of temporary removable 6 ft. high chain link fencing.

1.03 COORDINATION:

A. General: The work of this Contract includes coordination of the entire work of the project, including control of site utilization, from beginning of construction activity through project close-out and warranty periods.

1.04 MISCELLANEOUS PROVISIONS:

A. General: Except as otherwise indicated, comply with applicable requirements of Division-15 sections for mechanical provisions within units of General (Division 2-14) Work. Except as otherwise indicated, comply with applicable requirements of Division-16 sections for electrical provisions within units of General (Division 2-15) Work.

B. Service Connections: Refer to Division-15 and Division-16 sections for the characteristics of the mechanical and electrical services to be connected to units of general work. Provide units manufactured or fabricated for proper connection to and utilizations of available services, as indicated. Except as otherwise indicated, final connection of mechanical services to general work is defined as being mechanical work, and final connection of electrical services to general work is defined as electrical work.

C. Electrical Requirements: Except as otherwise indicated, comply with applicable provisions of The National Electrical Code (NEC) and standards by National Electrical Manufacturer's Association (NEMA), for electrical components of general work. Provide Underwriters Laboratories listed and labeled products where applicable.

PART 2 - PRODUCTS
(NOT UTILIZED)

PART 3 - EXECUTION

3.01 LIMITS OF CONSTRUCTION AND PROJECT COORDINATION

A. The Contractor shall coordinate the work under this contract so as to achieve operational status prior to the time stipulated in the agreement.

B. The Contractor shall be responsible for coordination of work and for the connection of the new facilities to utility service lines: electric, gas, telephone, water service and sanitary sewer lines.

C. The Contractor shall coordinate the work of the testing laboratory.

D. The following limits of construction shall apply to the Contractor(s) for the construction of the new sewage treatment plant and effluent disposal system under this Contract(s).

1. Electric and telephone services from utility sources shall be obtained and provided for the sewage treatment plant.

2. Potable water and gas service shall be obtained from on site water mains and gas mains to be installed on the project site by others. RPZ installation for the water line to the sewage treatment plant and disinfection of potable water system installed at the sewage treatment plant shall be performed by this Contractor.

3. This Contractor shall complete all site work and final grade the site for the proposed sewage treatment plant site.

4. The Contractor shall provide all new primary and secondary electrical service for the sewage treatment plant from the Con Edison power grid to be extended onto the site.

END OF SECTION

PART 1 – GENERAL

1.01 DESCRIPTION

A. This Section defines items provided by Owner and the Contractor's limitations in their use.

1.02 LANDS AND EASEMENTS

A. Owner has acquired the lands as delineated on the Drawings.

1.03 SUBSURFACE EXPLORATIONS

A. Contractor may make his own borings, explorations, and observations to determine soil, water, and other subsurface conditions. Contractor shall plan the Work based upon his own findings.

B. Compensation for test pits will be made only when ordered by the Engineer.

1.04 ELECTRICAL USAGE

A. Contractor shall provide connections to existing Con Edison electrical facilities, for all necessary temporary electrical service required for construction of the sewage treatment plant. Power costs shall be borne by the Contractor. Should electrical facilities not exist on site, Contractor will be responsible for providing and paying for wattage charges for temporary electrical power for his operations.

1.05 WATER AND TEMPORARY FACILITIES

A. Contractor shall provide connections to on-site water service for all necessary temporary potable water service for construction of the sewage treatment plant, should on site water facilities be installed at the time this Contractor performs his work.

B. The Contractor shall provide temporary on site portable sanitary facilities for the use of his employees, subcontractors, engineers, inspectors, etc.

PART 2 - PRODUCTS
(NOT UTILIZED)

PART 3 - EXECUTION

(NOT UTILIZED)

END OF SECTION

PART 1 - GENERAL

1.01 DESCRIPTION

A. This Section covers the cash allowances contained in the Price Schedule and included in the Contract Price, and defines the costs which will, and will not, be paid for out of the stipulated allowances.

1.02 PAYMENTS TO BE MADE OUT OF ALLOWANCES

A. General - Eligible charges described in this Paragraph 1.02 will be the only charges which will be paid for out of the stipulated allowances.

B. CASH ALLOWANCE FOR TESTING LABORATORY SERVICES REQUIRED UNDER SECTION 01410.

1. The actual charges made for infield and laboratory tests required under Section 01410 shall be paid for out of this cash allowance. Prior to each partial payment, the Contractor shall submit a certified invoice from the testing lab listing and detailing the total costs incurred since the last invoice. The invoice shall include man-hours, tests conducted, date of tests, test results and associated costs.

2. The Contractor shall include $20,000.00 in the lump sum bid for Item No. 1 in the Price Schedule – Lump Sum Contract for testing services connected with Section 01410.

1.03 SUBMITTALS

A. See Section 01300

B. All backup information to substantiate the invoice amount as required by the Engineer.

1.04 CHANGES TO STIPULATED ALLOWANCE

A. If actual cost differs from the stipulated allowance, the Contract Price will be adjusted accordingly.

PART 2 - PRODUCTS
(NOT UTILIZED)

PART 3 - EXECUTION

(NOT UTILIZED)

END OF SECTION

PART 1 - GENERAL

1.01 DESCRIPTION OF WORK:

A. Minimum administrative and supervisory requirements necessary for coordination of work on the project to be fulfilled by the Contractor include but are not necessarily limited to the following:

1. Coordination and meetings with representatives of the regulatory agencies, Owner and Engineer;
2. Administrative and supervisory personnel;
3. Surveys and records or reports;
4. Limitations for use of site;
5. Special reports;
6. General installation provisions;
7. Cleaning and protection.

1.02 COORDINATION AND MEETINGS:

A. Preconstruction Conference: Prior to the commencement of construction by the Contractor, representatives of the Owner, Engineer and Contractor shall hold a preconstruction conference with the Westchester Department of Health in Mount Kisco to discuss construction procedures and all other matters that affect the completion of the Contract Work. Prior to this time, the Contractor shall have submitted his progress schedule and list of subcontractors to the Engineer so that these can be discussed in detail at the conference.

The Contractor shall provide all shop drawings, schedules, etc. to the satisfaction of Westchester County Department of Health (WCDH). All work shall be inspected by representatives of WCDH. The Contractor shall satisfy and schedule WCDH inspections which are mandatory for all work performed.

B. Monthly Coordination Meetings: The Contractor shall attend monthly general project coordination meetings at regularly scheduled times that are convenient for the attendance of all parties involved. These meetings are in addition to specific meetings held for other purposes, such as regular project meetings and special preinstallation meetings.

1.03 LIMITATIONS ON USE OF THE SITE:

A. General: Limitations on site usage as well as specific requirements that impact site utilization are indicated on the drawings and by Section 01010. In addition to these limitations and requirements, the Contractor shall administer allocation of available space equitably among his subcontractors and other entities needing access and space, so as to

produce the best overall efficiency in performance of the total work of the project. The Contractor shall schedule deliveries so as to minimize space and time requirements for storage of materials and equipment on site.

B. The Owner shall designate equipment storage and vehicle parking areas to be used and maintained by the Contractor. The Contractor shall be responsible for protecting and securing his equipment.

PART 2 - PRODUCTS
(NOT UTILIZED)

PART 3 - EXECUTION

3.01 CLEANING AND PROTECTION:

A. General: During handling and installation of work at the project site, the contractor shall clean and protect work in progress and adjoining work in the basis of continuous maintenance. Apply protective covering on installed work where it is required to ensure freedom from damage or deterioration at the time of substantial completion.

B.

1. Clean and perform maintenance on installed work as frequently as necessary through the remainder of the construction period. Adjust and lubricate operable components to ensure operability without damaging effects.

C. Limiting Exposure of Work: To the extent possible through reasonable control and protection methods, the Contractor shall supervise performance of the work in such a manner and by such means which will ensure that none of the work, whether completed or in progress, will be subjected to harmful, dangerous, damaging or otherwise deleterious exposure during the construction period.

3.02 CONSERVATION AND SALVAGE:

A. General: It is a requirement for the Contractor's supervision and administration of the work that construction operations be carried out with the maximum possible consideration given to conservation of energy, water and materials. In addition, maximum consideration shall be given to salvaging materials and equipment involved in performance of the work, but not incorporated therein.

END OF SECTION

PART 1 - GENERAL

1.01 DESCRIPTION

A. Work covered by this Section includes field surveys as required to stake and layout the Work, and for other reasons relative to the Work. Work in this section to be paid for by the Contractor.

1.02 QUALITY ASSURANCE

A. All survey, layout and related work shall be performed by persons fully qualified to do such work, as approved by the Engineer.

PART 2 - PRODUCTS

2.01 GENERAL

A. Provide all surveys, to the accuracy required by the Engineer, by regulatory agencies, or as required for the proper execution of the Work.

2.02 MATERIALS

A. Provide all materials as required to properly perform the layout. All materials shall be of good professional quality and in first-class condition.

PART 3 - EXECUTION

3.01 LINES AND GRADES

A. The Contractor shall, with his own Licensed Land Surveyor, establish one bench mark for grades and for structures and thereafter obtain working or construction lines or grades as needed and in accordance with the base measurements, subject to the review of the Owner’s licensed project Surveyor.

3.02 AS-BUILT INFORMATION

A. The Contractor shall furnish to the Engineer, records of all as-built information, including slab, equipment and piping sizes, locations and elevations. Information shall be provided to the Engineer prior to the 90% completion of the work.

END OF SECTION

THIS PAGE WAS INTENTIONALLY LEFT BLANK

PART 1 - GENERAL

1.01 CODES, STANDARDS, AND SPECIFICATIONS

A. Whenever reference is made to any published standards, codes, or standard specifications, it shall mean the latest standard code, specification or tentative specification of the technical society, organization or body referred to, which is in effect on the date shown on the Drawings, except where a specific date of a standard or code is specified. Where specified articles, sections, paragraphs or other subdivisions of the referenced publications are not stated, the referenced publication shall apply in full, except where specifically noted otherwise.

B. When required by Engineer, furnish satisfactory evidence that materials and methods are in compliance with the referenced standards and codes.

1.02 ABBREVIATIONS - ORGANIZATIONS

A. The following is a partial list of abbreviations which may be used in the Specifications, and the organizations to which they refer:

AA	Aluminum Association
AAN	American Association of Nurserymen
AASHTO	American Assoc. of State Highway & Transportation Officials
ACI	American Concrete Institute
AGA	American Gas Association
AIA	American Institute of Architects
AISC	American Institute of Steel Construction
AISI	American Iron and Steel Institute
AMCA	Air Movement and Controls Association
ANSI	American National Standards Institute
AREA	American Railway Engineering Association
ARI	Air Conditioning & Refrigeration Institute
ASA	Acoustical Society of America
ASCE	American Society of Civil Engineers
ASHRAE	American Society of Heating, Refrigeration and Air Conditioning Engineers
ASME	American Society of Mechanical Engineers
ASTM	American Society for Testing and Materials
AWPA	American Wood Preservers' Association
AWS	American Welding Society
AWWA	American Water Works Association
CBM	Certified Ballast Manufacturers
DEC	State of New York Department of Environmental Conservation

DEP	State of New York Department of Environmental Protection
DHUD	U.S. Department of Housing & Urban Development
EIA	Electronic Industries Association
EPA	U.S. Environmental Protection Agency (USEPA)
ETL	Electrical Testing Laboratories, Inc.
FM	Factory Mutual Laboratories
FHA	Farmers Home Administration, U.S. Department of Agriculture
FS	Federal Specification
IEEE	Institute of Electrical & Electronics Engineers
IPCEA	Insulated Power Cable Engineers Association
NBFU	National Board of Fire Underwriters
NEC	National Electrical Code
NEMA	National Electrical Manufacturers Association
NFPA	National Fire Protection Association
OSHA	U.S. Occupational Safety & Health Administration
PS	Product Standard
WCDHS	Westchester County Department of Health
WCDPW	Westchester County Department of Public Works
SCS	U.S. Soil Conservation Service
SDI	Steel Door Institute
UL	Underwriters Laboratories, Inc.
WWPA	Western Wood Products Association

PART 1 - GENERAL

1.01 DESCRIPTION

A. This Section lists and defines various common abbreviations which are used throughout the Contract Documents.

B. Abbreviations of organizations, county and federal agencies which publish standards, codes, and regulations are defined in Section 01060 - CODES AND STANDARDS.

C. Other abbreviations and symbols may be found in legends and elsewhere on the Drawings. Piping material abbreviations are contained in the piping Sections.

D. Should an abbreviation or symbol not be specifically defined, it shall carry the standard definition commonly used in the industry.

E. Whenever any doubt arises as to what an abbreviation or symbol means, notify Engineer and he will issue a definition in writing.

1.02 ABBREVIATIONS

A. The following is a list of commonly used abbreviations which may be found in the Contract Documents, and the meanings ascribed to them:

A.C. or ac	Alternating Current
a or A	Amperes
AFF	Above Finished Floor
amp or Amp	Amperes
Alum.	Aluminum
Asph.	Asphalt
Aux.	Auxiliary
Bit. Conc.	Bituminous Concrete
CB	Circuit Breaker
Cl. Class	Class
cm	Centimeter
C.O.	Cleanout
Conc.	Concrete
Cont.	Continuous
Cu.	Cubic
cc	Cubic Centimeters

C.F.	Cubic Feet
CFM or cfm	Cubic Feet Per Minute
CFS or cfs	Cubic Feet Per Second
C.Y.	Cubic Yards
CT	Current Transformer
D.C. or dc	Direct Current
Dia.	Diameter
DWG. or Dwg.	Drawing
Dr.	Drive
Ea. or ea.	Each
EF	Each Face
EW	Each Way
Eff. or eff.	Efficiency
El. or Elev.	Elevation
Fin. Gr.	Finished Grade
fps	Feet Per Second
Ft. or ft.	Feet
ftg.	Footing
g.	Grams
Ga. or ga.	Gauge
Gal. or gal.	Gallon
Galv.	Galvanized
GPD or gpd	Gallons Per Day
GPM or gpm	Gallons Per Minute
H-O-A	Hand-off-automatic
Hz.or hz.	Hertz
I.D.	Inside Diameter
Inv.	Invert
IP	Instrument Panel
KVA or kva	Kilovolts-amperes
Kw or kw	Kilowatts
kwh or KWH	Kilowatt-hours
Lbs. or lbs.	Pounds
L.F.	Linear Feet
LPA	Lighting Panel "A"
L.S.	Lump Sum
m.	Meters
mA.	Milliamperes
Max. or max.	Maximum
MCC	Motor Control Center
mg.	Milligrams
MGD or mgd	Million Gallons Per Day
mi.	Miles
Min. or min.	Minimum
mm	Millimeters
No. or no.	Number
nom.	Nominal

N.T.S.	Not To Scale
O.D.	Outside Diameter
Oz. or oz.	Ounce
pb	Pushbutton
PPD	Pounds Per Day
P/B	Pullbox
pri.	Primary
psf	Pounds Per Square Foot
psi	Pounds Per Square Inch
psig	Pounds Per Square Inch, Gauge Pressure
PT	Potential Transformer
Pvt. or Pvmt.	Pavement
R.	Radius
R.O.W.	Right-of-Way
Sch.	Schedule
sec.	Secondary or Seconds
Sq. or sq.	Square
S.F.	Square Feet
S/S/P	Stop-start-pilot Station
Std. or std.	Standard
S.Y.	Square Yards
T&B	Top and Bottom
Typ.	Typical
U.O.N.	Unless Otherwise Noted
V or v	Volts
Vac or VAC	Alternating Current Voltage
Vdc or VDC	Direct Current Voltage
V.F.	Vertical Feet
Vol.	Volume
W or w	Watts
Yd. or yd.	Yards

1.03 SYMBOLS

A. The following is a list of commonly used symbols which may be found in the Contract Documents, and the meanings ascribed to them:

P Phase, Diameter, or Round (as applicable)
D Degrees (F. = Fahrenheit C. = Centigrade)
' Feet or Minutes
" Inches or Seconds
Number or Pound
/ Per or Divided By

PART 2 - PRODUCTS
(NOT UTILIZED)

PART 3 - EXECUTION
(NOT UTILIZED)

END OF SECTION

PART 1 - GENERAL

1.01 DESCRIPTION OF REQUIREMENTS:

A. General: This section specifies procedural and administrative requirements for compliance with governing regulations and codes and standards imposed upon the Work. These requirements include obtaining permits, licenses, inspections, releases and similar documentation, as well as payments, statements and similar requirements associated with regulations, codes and standards.

1. The term "Regulations" is defined to include laws, statues, ordinances and lawful orders issued by governing authorities, as well as those rules, conventions and agreements within the construction industry which effectively control the performance of the Work regardless of whether they are lawfully imposed by governing authority or not.

1.02 DEFINITIONS:

A. General Explanation: Certain terms in contract documents are defined in this article. Definitions and explanations contained in this section are not necessarily complete but are general for the Work to the extent that they are stated more explicitly in another element of the contract documents.

B. General Requirements: Provisions and requirements of other Division-1 sections apply to the entire work of the Contract and, where so indicated, to other elements which are included in the project.

C. Indicated: The term "indicated" is a cross-reference to graphic representations, notes or schedules on the drawings, to other paragraphs or schedules in the specifications, and to similar means of recording requirements in contract documents. Where terms such as "shown", "noted", "scheduled", and "specified" are used in lieu of "indicated", it is for the purpose of helping the reader locate the cross-reference, and no limitation of location is intended except as specifically noted.

D. Directed, Requested, etc. Terms such as "directed", "requested", "authorized", "selected", "approved", "required", "accepted", and "permitted" mean "directed by the Engineer", "requested by the Engineer", and similar phrases. However, no such implied meaning will be interpreted to extend the Engineer's responsibility into the Contractor's area of construction supervision.

E. Approve: Where used in conjunction with the Engineer's response to submittals, requests, applications, inquiries, reports and claims by the Contractor, the term "approved" will be held to limitations of the Engineer's responsibilities and duties as specified in General Conditions. In no case will the Engineer's approval be interpreted as a release of the Contractor from responsibilities to fulfill requirements of contract documents or acceptance of the Work, unless otherwise provided by requirements of the contract documents.

F. Project Site: The term "project site" means the space available to the Contractor for performance of the Work, either exclusively or in conjunction with others performing other construction as part of the overall project. The extent of the project site is shown on the drawings and may or may not be identical with the description of the land upon which the project is to be built.

G. Furnish: The term "furnish" is used to mean "supply and deliver to the project site, ready for unloading, unpacking, assembly, installation, and similar operations."

H. Install: The term "install" is used to describe operations at project site including the actual "unloading, unpacking, assembly, erection, placing, anchoring, applying, working to dimension, finishing, curing, protecting, cleaning and similar operations."

I. Provide: The term "provide" means "to furnish and install, complete and ready for the intended use."

J. Installer: The "installer" is "the entity" (person or firm) engaged by the Contractor, its subcontractor or sub-subcontractor for performance of a particular element of construction at the project site, including installation, erection, application and similar required operations. It is a requirement that installers are experienced in the operations they are engaged to perform.

K. Testing Laboratories: A "testing laboratory" is an independent entity engaged to perform specific inspections or tests of the Work, either at the project site or elsewhere, and to report, and (if required) interpret results of those inspections or tests.

1.03 DRAWING SYMBOLS:

A. General: Except as otherwise indicated, graphic symbols used on the drawings are those symbols recognized in the construction industry for the purposes indicated.

1.04 INDUSTRY STANDARDS:

A. Applicability of Standards: Except where more explicit or stringent requirements are written into the contract documents, applicable construction industry standards have the same force and effect as if bound into or copies directly into the contract documents. Such industry standards are made a part of the contract documents by reference. Individual specification sections indicate which codes and standards the Contractor must keep available at the project site for reference.

1. Referenced standards (standards referenced directly in the contract documents) take precedence over standards that are not referenced but generally recognized in the industry for applicability to the Work.

2. Unreferenced standards are not directly applicable to the Work, except as general requirements of whether the Work complies with recognized construction industry standards.

B. Publication Dates: Except as otherwise indicated, where compliance with an industry standard is required, comply with standard in effect as of date of contract documents.

C. Conflicting Requirements: Where compliance with two or more standards is specified, and where these standards establish different or conflicting requirements for minimum quantities or quality levels, the most stringent requirement will be enforced, unless the contract documents specifically indicate otherwise. Refer requirements that are different, but apparently equal, and uncertainties as to which quality level is more stringent to the Engineer for a decision before proceeding.

D. Copies of Standards: The contract documents require that each entity performing work be experienced in that part of the Work being performed. Each entity is also required to be familiar with industry standards applicable to that part of the Work. Copies of applicable standards are not bound with the contract documents.

1. Where copies of standards are needed for proper performance of the Work, the Contractor is required to obtain such copies directly from the publication source.

E. Abbreviations and Names: Trade association names and titles of general standards are frequently abbreviated. Where acronyms or abbreviations are used in the specifications or other contract documents they are defined to mean the recognized name of the trade association, standards generating organization, governing authority or other entity applicable to the context of the text provision.

F. Abbreviations and Names: Trade association names and titles of general standards are frequently abbreviated. The following acronyms or abbreviations as referenced in contract documents are defined to mean the associated names. Both names and addresses are subject to change, and are believed to be, but are not assured to be, accurate and up-to-date as of date of contract documents.

1. AASHTO — American Association of State Highway and Transportation Officials
444 North Capitol Street,
Suite 225
Washington, DC 20001
(202) 624-5800

2. ACI — American Concrete Institute
P.O. Box 19150
Detroit, MI 48219
(313) 532-2600

3. AI — Asphalt Institute
Asphalt Institute Building
College Park, MD 20740
(301) 277-4258

4. AISC — American Institute of Steel Construction
400 N. Michigan Avenue, 8th Floor
Chicago, IL 60611
(312) 670-2400

5. AISI — American Iron and Steel Institute
1000 Sixteenth Street NW
Washington, DC 20036
(202) 452-710 0

6. AITC — American Institute of Timber Construction
333 W. Hampden Avenue
Englewood, CO 80110
(303) 761-3212

7. ANSI — American National Standards Institute
1430 Broadway
New York, NY 10018
(212) 354-3300

8. APA — American Plywood Association
P.O. Box 11700
Tacoma, WA 98411
(206) 565-6600

9. API	American Petroleum Institute 1220 L Street NW Washington, DC 20005 (202) 682-8000
10. ASHRAE	American Society of Heating, Refrigeration and Air-Conditioning Engineers 1791 Tullie Circle NE Atlanta, GA 30329
11. ASME	American Society of Mechanical Engineers 345 East 47th Street New York, NY 10017 (212) 705-7722
12. ASPE	American Society of Plumbing Engineers 3617 Thousand Oaks Blvd., Suite 210 Westlake, CA 91362 (805) 495-7120
13. ASTM	ASTM 655 Fifteenth Street NW Washington, DC 20005 (202) 639-4025
14. AWS	American Welding Society P.O. Box 351040 550 Le Jeune Road NW Miami, FL 33135 (305) 443-9353
15. AWWA	American Water Works Association 6666 W. Quincy Avenue Denver, CO 80235 (303) 794-7711
16. IEEE	Institute of Electrical and Electronic Engineers 345 E. 47th Street New York, NY 10017 (212) 705-7900
17. IESNA	Illuminating Engineering Society of North America 345 E. 47th Street New York, NY 10017 (212) 705-7900

18. ISA	Instrument Society of America P.O. 12277; 67 Alexander Drive Research Triangle Park, NC 27709 (919) 549-8411
19. NAPA	National Asphalt Pavement Association Calvert Building, Suite 620 6811 Kenilworth Avenue Riverdale, MD 20737 (301) 779-4880
20. NEC	National Electric Code (by NFPA)
21. NECA	National Electrical Contractors Association 7315 Wisconsin Avenue Bethesda, MD 20814 (301) 657-3110
22. NEMA	National Electrical Manufacturers Association 2101 L Street NW, Suite 300 Washington, DC 20037 (202) 457-8400
23. NFPA	National Fire Protection Association Batterymarch Park Quincy, MA 02269 (617) 770-3000
24. UL	Underwriters Laboratories 333 Pfingsten Road Northbrook, IL 60062 (312) 272-8800

G. Federal Government Agencies: Names and titles of federal government standard or specification producing agencies are frequently abbreviated.

The following acronyms or abbreviations as referenced in the contract documents indicate names of standard or specification producing agencies of the federal government. Names and addresses are subject to change but are believed to be, but are not assured to be, accurate and up-to-date as of the date of the contract documents.

1. EPA	Environmental Protection Agency 401 M Street SW Washington, DC 20590 (202) 829-3535

2. OSHA — Occupational Safety and Health Administration
(U.S. Department of Labor)
Government Printing Office
Washington, DC 20402
(202) 783-3238

3. PS — Produce Standard of NBS
(U.S. Department of Commerce)
Government Printing Office
Washington, DC 20402
(202) 783-3238

4. Westchester County Agencies: Names of Westchester County Regulatory Agencies are as follows:

1. Westchester County Department of Public Works
Engineering Design and Construction
148 Martine Avenue
White Plains, New York 10601
Robert S. Donnelly, P.E., Director of Design Coordination
(914) 995-8110

2. Westchester County Department of Health
Bureau of Environmental Quality
25 Moore Avenue
Mount Kisco, New York 10549
Heather McVeigh, P.E, Associate Engineer
(914) 864-7333

PART 3 - EXECUTION

3.02 REQUIRED MEASUREMENTS

Item No.	Measurements
Lump Sum Bid	**Summit Club at Armonk Sewage Treatment Plant including, equalization tank and piping, distribution box, treatment process tank and piping, STP control building, tertiary filter, ultraviolet disinfection units, effluent outfall piping, and odor control device, etc. Complete and ready for operation.** **No measurements shall be made in connection with this item.**

PART 4 - PAYMENTS

4.01 GENERAL REQUIREMENTS AND STIPULATIONS

A. No separate payments will be made for the Work under this Contract except for the pay items stipulated in this Part 4. All costs in connection with the Work shall be included in the Price Schedule – Lump Sum Proposals.

B. The pay item shall be full compensation for all costs in connection with the item including, but not limited to, (1) the furnishing of all materials, labor, equipment, tools, and all incidentals, (2) the installation of all materials, equipment, facilities, accessories and appurtenant items, (3) proper share of overhead and profit, (4) excavation, trenching, backfilling, dewatering, shoring and testing, (5) restoration of surfaces, (6) all temporary facilities and controls and (7) all related and incidental work and items necessary or required to complete the Work and to provide completely connected, operational and approved systems capable of performing as required.

4.02 PAY ITEMS

A. The names of the following pay items or Contracts is the abbreviated form of the Bid Items or Contracts as contained on the Price Schedule – Lump Sum Proposals in the Bid Forms. The name, as shown below or on the Bid Form, shall not be construed to represent a complete description of all of the Work included under such item or Contract and is provided only as a means of identification and for ease of conversation.

	Payments
Total Bid	Summit Club Sewage Treatment Plant including but not limited to furnishing and installing a factory fabricated buried BESST treatment plant and equalization tank, complete with all interconnecting piping and wiring as recommended by Purestream, STP control building, tertiary filter, ultraviolet disinfection system, flow meter vault and meter, stand-by generator, odor control system, effluent disposal system, site preparation, final grading, fencing and access driveway. Lump Sum payment for all work shown, specified and described in the Contract Documents for a sewage treatment plant including but not limited to General Construction, Site Work, Mechanical, Electrical, Heating and Ventilating, Plumbing, Odor Control, complete and ready for operation including the cash allowances of $20,000.

END OF SECTION

PART 1 - GENERAL

1.01 DESCRIPTION

A. This Section generally describes the types of submittals required during construction, procedures for making submittals, the preparation of submittals and the times submittals are required.

B. Additional submissions are required by the Instruction to Bidders and the General Conditions. Such submittals generally include such things as the Bids and Bidding Documents, insurance policies, bonds and insurance coverage, Applications for Payment, requests for Change Orders, guarantees, permits, certifications and documents required by Federal, State and Local authorities, submissions required by utility companies and other persons, firms or organizations and other such submittals.

C. The requirements of this Section are general in nature and basically apply to all Sections of the Specifications. Additional submissions and more specific requirements on submissions are contained in the various Specification Sections. In each individual Section, no attempt was made to cover or repeat the submissions contained in this Section and, therefore, the total of all submissions required are the combination of those described in this Section plus those specified in the various other Sections.

1.02 IDENTIFICATION OF SUBMITTALS

A. Completely identify each submittal and resubmittal by showing at least the following information (attached form may be used):

1. Name of Project;

2. Name, address and telephone number of Contractor and Contractor's stamp of approval, indicating that the submission has been thoroughly checked by Contractor for conformance and fit;

3. Name, address and telephone number of individual, firm or organization who will be doing the fabrication, supplying or manufacturing of equipment and materials and the name of the individual who may be contacted for further information;

4. Drawing number and Specification Section number to which submittal applies;

5. The location, service, equipment designation and other information to specifically indicate the item for which approval is requested;

6. Whether it is an original submittal (first submission) or a resubmittal (second, third, etc. submission);

7. "Shop drawing transmittal" form (specimen attached herein);

Note: Submissions not containing the above will be returned to Contractor, unreviewed by Engineer.

1.03 COORDINATION OF SUBMITTALS

A. Prior to submitting to Engineer, fully coordinate all interrelated work. As a minimum, do the following:

1. Determine and verify all field dimensions and conditions, materials, catalog numbers and similar data;

2. Coordinate with all trades, subcontractors, other contractors, public agencies, and utility companies and secure all necessary approvals, in writing;

3. Clearly indicate any deviations from the Contract Documents.

B. Make submittals in groups containing all associated items which in some way depend upon each other. This also applies to color charts, as one color may not be able to be selected without the selection of other colors so as to form a color coordinated group. Engineer may elect not to review partial, incomplete submissions, whereupon he will notify Contractor of the additional submissions which are required before a review can be made.

1.04 TIMING OF SUBMITTALS

A. Make submittals far enough in advance of scheduled dates of installation to provide time for reviews, for securing necessary approvals, for possible revisions and resubmittals, and for placing orders and securing delivery. The Engineer will review submittals in a manner as expedient as possible, however, no representation is made as to the amount of time which will be utilized for review.

B. Submissions may be returned unreviewed, rejected for several reasons, approved conditioned upon submission of related items or for other reasons set forth in the Contract Documents.

C. Make submissions well in advance as the returning, rejecting or disapproval of submissions or other similar circumstances are possible

and are deemed "avoidable delays" as defined in the General Conditions. Costs for these delays or those attributed to Contractor's tardiness in making submittals shall be borne by the Contractor.

1.05 DESTINATION OF SUBMITTALS

A. Unless otherwise specified, copies of every submission shall be sent to Engineer's office as follows:

Robinson & Muller Engineers, P.C.
50 Elm Street
Huntington, New York 11743

B. Submittals which are stamped “approved” or “approved as noted” by the Engineer will be forwarded to Westchester County Department of Public Works and/or Westchester County Department of Health for their review and comment. The Contractor will receive the agency reviewed submittals after return of same to the Engineer by the agency. Final determination of Westchester County Agency relative to acceptance of shop drawing is binding.

1.06 CLARITY OF SUBMITTALS

A. All printed materials shall be neat, clean, clear and legible, and of such quality that they can be easily reproduced by normal photocopying or blueprinting machines. Copies not conforming to this paragraph may be returned to Contractor, unreviewed.

1.07 CONTRACTOR'S REPRESENTATION

A. By making a submission, Contractor represents that he has determined and verified all field measurements, field construction criteria, materials, catalog numbers and similar data, and that he has checked and coordinated each submission with other contracts at or adjacent to the Project site and with the requirements of the Contract Documents.

1.08 ENGINEER'S REVIEW

A. Engineer will review and comment on each submission conforming to the requirements of this Section. Engineer's review and comments shall be considered as a gratuitous service, given as assistance in interpreting the requirements of the Contract, and in no way shall it relieve Contractor of any of his responsibilities under the Contract. Engineer's review will be only for conformance with the design concept of the Project and will be confined to general arrangement and compliance with the Contract Documents only, and will not be for the purpose of checking dimensions, weights, clearances, fitting, tolerances, interferences, or coordination of

trades or contractors. The approval of a separate item does not represent approval of an assembly in which the item functions.

B. Submittals will be marked as follows:

APPROVED - The content of this submittal has been reviewed by the Engineer and been found to be in general compliance with the Contract Documents. No further submission of this submittal is required and the information contained in the submittal may be built into the Work in accordance with the terms and conditions of the Contract Documents.

APPROVED AS NOTED - The content of this submittal has been reviewed by the Engineer and has been found in general to be in compliance with the Contract Documents. The notations made on the submittal, by the Engineer, shall be incorporated into the Work in accordance with the terms and conditions of the Contract Documents. No further submission of this submittal is required.

RESUBMIT - The content of this submittal has been reviewed by the Engineer, and this review has indicated that additional data and/or modifications to the submitted data or other changes are required to bring the work represented in this submittal into compliance with the Contract Documents. This submittal shall be reviewed and remarked in accordance with the Engineer's comments, by the Contractor, and resubmitted to the Engineer for another review. The information contained on the resubmittal shall not be incorporated into the Work until the drawing is returned to the Contractor with an "Approved" or "Approved as Noted" stamp.

DISAPPROVED - The content of this submittal has been reviewed by the Engineer and this review has indicated that the work displayed in the submittal is not in compliance with the Contract Documents. The Contractor shall submit another submittal for this portion of the Work, which complies with the Contract Documents.

C. No payment will be made on any item for which a submission is required if such submission:

1. has not been made;

2. has been made but was not stamped "Approved" by Engineer;

3. has been made and stamped "Approved As Noted", but Contractor has not complied with Engineer's notes marked on the submittal;

4. has been made and stamped "Approved", but item provided does not conform to the shop drawing nor to the Contract Documents.

1.09 RESUBMISSIONS

A. Prepare new and additional submissions, make required corrections, and resubmit corrected copies until approved. On, or with, resubmittals, clearly describe revisions and changes made, other than the corrections requested by Engineer, which did not appear on the previous submissions.

1.10 CONTRACTOR'S RESPONSIBILITIES

A. Engineer's approval of submittals shall not relieve Contractor of responsibility for any deviation from the requirements of the Contract Documents unless Contractor has informed Engineer, in writing, of such deviation at the time of submission and Engineer has given written approval to the specific deviation, nor shall Engineer's approval relieve Contractor from responsibility for errors or omissions in the submittals.

B. No portion of the Work requiring a submission shall be commenced until the submission has been approved by Engineer and the respective Westchester County Agency.

PART 2 - SUBMITTALS

2.01 CERTIFICATIONS

A. Submit certifications of compliance whenever required by the Specifications or Engineer. Certifications shall be complete and exact, they shall be properly authenticated by the written signature, in ink, of manufacturer, officer or duly authorized representative of the person, firm or organization issuing such certification, and they shall guarantee that the materials or equipment are in complete conformance with the requirements of these Specifications.

2.02 SHOP DRAWINGS

A. Submit shop drawings for all fabricated work, for all manufactured items, and for all other items specifically required by the Specifications. Submit each shop and layout drawing to Engineer in the form of a reproducible transparency accompanied by a black and white print.

B. After the submittal has been reviewed and the transparency annotated, Engineer will have three blueprints made and will keep these for his records. Engineer will return the transparency to Contractor.

C. **Submit at least eight (8) copies of each standard drawing, catalog cut, or other material for which no transparency is available. Contractor is to provide a digital copy of all submittals. If a resubmission is not required, Engineer will retain five copies and return the remaining three (3) copies to Contractor.**

D. Subcontractors must submit shop drawings directly to Contractor for checking. Thoroughly check subcontractors' shop drawings for measurements, sizes of members, details, materials, and conformance with the Contract Documents. Return submittals which are found to be inaccurate or in error. Do not submit to Engineer until corrections have been made. ***No shop drawing submittals to be submitted directly to the Engineer by a subcontractor of the contractor.***

E. Clearly show the relation of the various parts, and, where the Work depends upon field measurements, make measurements and include them on the shop drawings before submitting to Engineer.

F. Reference all submissions to clearly indicate the Specification Section, location, service and function of each particular item. Submissions for a single item, or group of related items, shall be complete. When submitting manufacturers' catalogs, pamphlets or other data sheets, in lieu of prepared shop drawings, specifically identify in ink the items for which approval is being sought.

G. If the shop drawings contain any departures from the Contract requirements, specifically describe them in Contractor's letter of transmittal. Where such departures require revisions to layouts or structural changes to the Work as shown, Contractor shall, at his own expense, prepare and submit revised layout and structural drawings. Make drawings the same size as the Contract Drawings.

2.03 OPERATION AND MAINTENANCE DATA

A. Submit complete operation and maintenance manuals for valves, hydrants, pumps, motors, stand-by generator, all power or electrically driven equipment, and for other items for which routine operation and maintenance will be required.

B. Suitably bind O&M Manuals and data sheets into volumes for specific systems, structures, and the like.

C. Submit six (6) copies of the bound and indexed O&M Manual Volume to the Engineer, prior to the 75% completion point of the Work. Further, submit individual O&M Manuals and data sheets, as required, for sub-systems and

portions of the Work, along with other submittals and shop drawings relating thereto.

D. Operation and maintenance manuals shall include, as a minimum, installation, adjustment, operation and maintenance instructions, lubrication schedules, troubleshooting guides and the manufacturer's and service representative's name, address and telephone number. Submit manuals in duplicate, before the equipment is delivered to the Project site.

E. Complete and bind O&M Manual copies of the attached "Equipment Record Sheet" for each piece of equipment. Additional forms are available from Engineer at cost of reproduction, handling, and mailing.

2.04 TEST RESULTS AND INSTALLATION

A. Whenever tests are required on materials and equipment, such tests shall be performed, and the test results submitted to Engineer. Do not deliver to the Project or incorporate into the Work any materials or equipment for which Engineer has not issued a written approval or acceptance of the required tests, test results and as-built drawings.

PART 1 – GENERAL

1.01 DESCRIPTION

A. This Section covers the requirements for utilizing the services of an approved independent testing laboratory to perform tests and inspections to determine compliance with these Specifications.

B. Sampling and testing methods and procedures can also be found in the following Sections:

Soil Compaction 02250
Concrete Testing 03300

C. **Testing Laboratory Services connected with this Section shall be paid for out of a Cash Allowance. A Cash Allowance of $20,000 shall be included in the price bid to the Owner and be used for all laboratory testing services.**

1.02 QUALITY ASSURANCE

A. In order to establish compliance with the Contract Documents, materials shall be thoroughly and completely tested, examined and evaluated before they are incorporated into the Work. During and after installations, additional tests, examinations, and evaluations shall be made to determine continued compliance throughout the course of the Work.

B. Testing laboratory shall be a reputable, experienced firm which is capable of performing all of the required testing and a firm which is regularly engaged as a testing laboratory.

C. Perform all sampling and testing in strict accordance with specified procedures and use the materials, instruments, apparatus, and equipment required by the codes, regulations and standards. Where specific testing requirements or procedures are not described, perform the testing in accordance with all pertinent codes and regulations and with recognized standards for testing.

D. In the event that samples and test specimens are not properly taken, handled, stored or delivered, or if other requirements of this Section are not complied with, Engineer reserves the right to delegate any or all of this work to others, or to take whatever action he deems necessary to ensure that sampling and testing are properly accomplished, for which all costs shall be borne by Contractor.

E. Engineer further reserves the right to disapprove of the use of a specific testing laboratory, even after prior approval, if the laboratory fails to meet or comply with the requirements of this Section. If this should occur, the Contractor shall immediately dispose of the testing laboratory's services and retain the services of a different laboratory acceptable to Engineer.

1.03 SUBMITTALS

A. See Section 01300.

B. Within **fifteen (15) days** after the date the Owner signed the Agreement, submit brochures or other documentation from **three (3)** testing laboratories, clearly indicating experience, location, qualifications of staff, available equipment and facilities, standard fees, other pertinent information, and descriptions of any limitations or restrictions. Based upon this material, Engineer will select one firm to be the primary testing laboratory, and one firm which will act as a stand-by.

C. **Certified copies signed and sealed by a Professional Engineer registered in the State of New York for each test result. Mail copies directly from the laboratory to Engineer. Contractor shall make arrangements with the laboratory to secure his own copies**.

1.04 DELIVERY, STORAGE AND HANDLING

A. Extreme care shall be exercised in the taking, storage, handling and delivery of samples and test specimens to avoid breakage, damage and disturbance.

B. Provide all required storage facilities.

C. Carefully deliver all samples and test specimens to the laboratory.

1.05 SCHEDULING

A. Except where otherwise specified, Engineer will determine the number of samples to be taken, the date and time samples will be taken and tests made, the number and type of tests to be performed, who will collect the samples, how they will be handled and stored, and when laboratory personnel are required on site.

B. Engineer will notify Contractor of his decision to take samples and/or have tests made and provide him with the pertinent information. Contractor is responsible for notifying the testing laboratory and for having the testing performed, on schedule.

C. In addition to the above, Contractor shall make his own arrangements for the sampling and testing of materials he proposes to incorporate into the Work. This shall not be paid for out of the cash allowance.

D. Notify Engineer at least 24 hours in advance of the times at which scheduled samples or tests will be conducted.

E. If samples and/or tests cannot be taken or performed when required, delay the Work until such time that they can be accomplished. Where possible, any work which has been installed but has not been sampled or tested as required, shall be tested by other means. Upon Engineer's request, uncover any work which has been buried or covered and perform special tests designated by Engineer. If the work cannot be tested by other means, Engineer may declare the work unacceptable. All costs associated with noncompliance and for special testing shall be borne by the Contractor and not be paid for out of the cash allowance.

F. Should the testing laboratory be scheduled to take or collect samples or to perform tests and finds that it is unable to do so as a result of delays in construction, inclement weather, or any other reason, reschedule the tasks for a date acceptable to Engineer.

G. Plan all work and operations to allow for the taking and collection of samples and allow adequate time for the performance of tests. Delay the progress of questionable work until the receipt of the certified test reports.

PART 2 - PRODUCTS

2.01 TESTING LABORATORY

The testing laboratory shall meet the following criteria:

A. Be capable of performing all of the required tests.

B. Be regularly engaged in performing the types of services required.

C. Have adequate facilities, materials, equipment and personnel to perform the services.

D. Have an adequately trained, experienced and qualified staff.

E. Have at least one (1) registered professional engineer licensed in the State of New York who shall be capable of performing field tests, supervising laboratory testing, and who can interpret test results. The professional engineer shall be thoroughly knowledgeable in materials, soils, asphalt paving and concrete.

F. Must be able to be on the Project site within 4 hours after being notified.

2.02 TEST REPORTS

A. Each report shall be in writing and shall include the testing method used, the test results, the specified results, the exact location of where the test specimens were taken, the date taken, Project identification, Contractor's name, and other pertinent information required for a complete and meaningful test report.

B. Each report shall be signed and certified by a responsible officer of the testing agency.

C. Mail reports directly to Engineer within 24 hours after the sample is taken, except in those instances where tests cannot be immediately performed because of required curing or incubation periods, or lengthy testing procedures.

D. The laboratory shall verbally communicate test results to Engineer, when he requests same. This does not eliminate nor replace the requirements for a written report.

PART 3 – EXECUTION

3.01 COOPERATION WITH TESTING LABORATORY

A. Allow representatives of the testing laboratory access to the Work at all times.

B. Provide all equipment, labor, materials and facilities required by the laboratory to properly perform its functions.

C. Cooperate with and assist laboratory personnel during the performance of their work.

3.02 TEST SPECIMENS AND SAMPLES

A. Test specimens and samples shall be taken by the person(s) designated in other Sections, or as directed by Engineer. Do field sampling and testing in the presence of Engineer.

B. Provide all materials, equipment, facilities and labor for securing samples and test specimens and for performing all field testing.

END OF SECTION

PART 1 - GENERAL

1.01 DESCRIPTION

A. Work covered by this Section includes the requirements for meeting satisfactory conditions for final inspection of the Work.

B. Related work specified elsewhere includes the requirements of the entire Contract Documents, all conditions of which shall be met prior to final inspection of the Work.

1.02 QUALITY ASSURANCE

A. The Contractor shall turn the Work over to the Owner in perfect operating condition as compared to the Contract Documents. Make such adjustments in the Work, additional tests, and all else as may be necessary, in the opinion of the Engineer, in order that all parts of the Project covered by such Contract will operate together, properly, in accordance with the intent of the Contract Documents.

B. Upon completion of the Work and just prior to final inspection, remove from the premises all plant, machinery, equipment, surplus rock, lumber, forms, debris and all other materials. The entire jobsite and the Work shall be in a clean and finished state.

1.03 FINAL INSPECTION

A. Upon receipt of written notice from the Contractor that the Work under the Contract is complete and all tests and adjustments in the Work made, the Engineer and the WCDH will make a final inspection and will notify the Contractor of all instances in which the Work fails to comply with the Drawings and Specifications as well as any defects which he may discover. The Contractor shall thereupon immediately rebuild, alter or restore the Work so that it will comply with the Drawings and Specifications and remedy all defects at his own cost and expense and to the satisfaction of the Engineer and the WCDPW.

B. Furnish all labor, equipment and materials required by the Engineer to perform the various types of inspections, including communication equipment, vehicles, power winches, paint thickness gauges, electrical instruments and all else required and as approved by the Engineer.

C. All machinery, equipment, controls, systems and subsystems shall be in proper, clean, and adjusted operating conditions. The Contractor shall demonstrate to the complete satisfaction of the Engineer and WCDH that all items of the project are constructed, installed and operating as required

by these specifications and in accordance with manufacturer's installation and operation instructions.

D. Upon satisfactory completion of all alterations, repairs, or other work as directed by the Engineer, the Final Certificate will be issued.

PART 2 - PRODUCTS
(NOT UTILIZED)

PART 3 - EXECUTION
(NOT UTILIZED)

END OF SECTION

PART 1 - GENERAL

1.01 DESCRIPTION OF REQUIREMENTS:

A. This section specifies administrative and procedural requirements for temporary services and facilities, including such items as temporary utility services, temporary construction and support facilities, and project security and protection.

1. Use Charges: Cost for usage charges for temporary electrical and water utility services as defined elsewhere are chargeable to the Owner.

B. Temporary utility services required for use at the project site include but are not limited to the following:

1. Water service and distribution;
2. Temporary electric power and light;
3. Temporary sanitary facilities;
4. Temporary equipment storage trailer(s);
5. Solid waste dumpster(s).

1.02 QUALITY ASSURANCE:

A. Regulations: Comply with requirements of local laws and regulations governing construction and local industry standards, in the installation and maintenance of temporary services and facilities, including but not limited to the following:

1. Building Codes, including local requirements for permits, testing and inspection;
2. Health and safety regulations;
3. Utility company regulations and recommendations governing temporary utility services;
4. Police and Fire Department rules and recommendations;
5. Police and Rescue Squad recommendations;
6. Environmental protection regulations governing use of water and energy, and the control of dust, noise and other nuisances.

B. Trade Jurisdictions: The assigned responsibilities for the installation and operation of temporary utilities are not intended to interfere with the normal application of trade regulations and union jurisdictions applicable to the Work.

1.03 JOB CONDITIONS:

A. General: Provide each temporary service and facility ready for use at each location when the service or facility is first needed to avoid delay in performance of the work. Maintain, expand as required and modify temporary services and facilities as needed throughout the progress of the work. Do not remove until services or facilities are no longer needed or are replaced by the authorized use of completed permanent facilities.

B. Conditions of Use: Operate temporary services and facilities in a safe and efficient manner. Do not overload temporary services or facilities, and do not permit them to interfere with the progress of the work. Do not allow unsanitary conditions, public nuisances or hazardous conditions to develop or persist on the site.

1. Temporary Utilities: Do not permit the freezing of pipes, flooding or the contamination of water sources.

2. Security and Protection: Maintain site security and protection facilities in a safe, lawful and publicly acceptable manner. Take necessary measures to prevent erosion of the site.

PART 2 - PRODUCTS

2.01 MATERIALS AND EQUIPMENT:

A. General: Provide new materials and equipment for temporary services and facilities; used materials and equipment that are undamaged and in serviceable condition may be used, if acceptable to the Engineer. Provide only materials and equipment that are recognized as being suitable for the intended use, by compliance with appropriate standards.

B. Electrical Service: Comply with applicable NEMA, NECA and UL standards and governing regulation for materials and layout of temporary electric service, including those requirements included in Division-16 sections.

C. Voltage Difference: Provide identification warning signs at power outlets which are other than 110-120 volt power. Provide polarized outlets for plug-in type outlets, to prevent insertion of 110-120 volt plugs into higher voltage outlets.

D. Electrical Power Cords: Use only grounded extension cords; use "hard-service" cords where exposed to abrasion and traffic. Use single lengths or use waterproof connectors to connect separate lengths of electric cords, if single lengths will not reach areas of work.

E. Self-Contained Toilet Units: Provide one (1) single-occupant self-contained toilet unit of the chemical, aerated recirculation, or combustion type, properly vented and fully enclosed with a glass fiber reinforced polyester shell or similar non-absorbent material.

PART 3 - EXECUTION

3.01 INSTALLATION, GENERAL:

A. Power Distribution System: Provide circuits of adequate size and proper characteristics for each use. In general run wiring overhead and rise vertically where wiring will be least exposed to damage from construction operations.

B. Collection and Disposal of Wastes:

1. General: Establish a system for daily collection and disposal of waste materials from construction areas and elsewhere on the site. Enforce requirements strictly. Do not hold collected materials at the site longer than 7 days during normal weather or 3 days when the daily temperature is expected to rise above 80 deg F (27 deg C). Handle waste materials that are hazardous, dangerous, or unsanitary separately from other inert waste by containerizing appropriately. Dispose of waste material in a lawful manner.

a. Burying or burning of waste materials on the site will not be permitted.

b. Washing waste materials down sewers or into waterways will not be permitted.

3.02 SECURITY AND PROTECTION FACILITIES INSTALLATION:

A. General: Provide a reasonably neat and uniform appearance in security and protection facilities acceptable to the Engineer and the Owner.

B. Barricades, Warning Signs and Lights:

1. General: Comply with recognized standards and code requirements for the erection of substantial, structurally adequate barricades where needed to prevent accidents and losses. Paint with appropriate colors, graphics and warning signs to inform personnel at the site and the public, of the hazard being protected against. Provide lighting where appropriate and needed, including flashing red lights where appropriate.

3.03 OPERATION, TERMINATION AND REMOVAL:

A. Supervision: Enforce strict discipline in use of temporary services and facilities at the site. Limit availability of temporary services and facilities to essential and intended uses to minimize waste and abuse. Do not permit temporary installations to be abused or endangered. Do not allow hazardous, dangerous or unsanitary conditions to develop or persist on the project site.

B. Maintenance: Operate and maintain temporary services and facilities in good operating condition throughout the time of use and until removal is authorized. Protect from damage by freezing temperatures and similar elements.

C. Protection: Prevent water filled piping from freezing, by use of ground covers, insulation, by keeping drained or by temporary heating. Maintain distinct markers for underground lines. Protect from damage during excavation operations.

D. Termination and Removal: Unless the Engineer requests that it be maintained for a longer period of time, remove each temporary service and facility promptly when the need for it or a substantial portion of it has ended, or when it has been replaced by the authorized use of a permanent facility, or no later than substantial completion. Complete, or, if necessary, restore permanent work which may have been delayed because of interference with the temporary service or facility. Repair damaged work, clean exposed surfaces and replace work which cannot be satisfactorily repaired.

END OF SECTION

PART 1 - GENERAL

1.01 DESCRIPTION

A. Work covered by this Section includes requirements for protection of persons and the public in general, during the course of the Work.

B. Related work specified elsewhere includes:

General Conditions
Temporary Facilities and Controls – 01500

C. Install and maintain fencing to protect the public from open excavations.

PART 2 - PRODUCTS

2.01 GENERAL

A. Comply with the requirements of Section 01600, MATERIAL AND EQUIPMENT.

2.02 SNOW FENCES (EXCAVATION PROTECTION)

A. Posts - Six feet (6') high, steel fence posts, located at 8' O.C.

B. Fencing - Four feet (4') high wooden lath, durably bound together at 4" O.C. Bind fencing to posts at top and bottom with a wire of a thickness gauge equal to that of the fencing wire.

PART 3 - EXECUTION

3.01 PERFORMANCE

A. Conduct all operations so as to interfere as little as possible with the possible work of other Contractors on adjacent site projects. Maintain fences, install shoring, provide watchmen, maintain red lights, post danger signs warning against the hazards created by the construction work, and take these and such other precautions as may be necessary to protect life and property. The Contractor is responsible for all damages occasioned in any way by his act or neglect, or that of his agents, employees or workmen.

3.02 WATCHMEN AND HAZARD ELIMINATION

A. The Contractor shall maintain the work area in a safe and secure condition throughout the entire contract. A watchman shall be employed by the Contractor as he deems necessary to ensure safe and secure areas. The appearance of the Owner's personnel within the work area will not relieve the Contractor of his responsibilities in this regard. If the Engineer deems the Contractor's operation to be unsafe or unsecure, the Engineer reserves the right to order the Contractor to provide a 24-hour attendance of the work area by watchmen at no additional cost to the Owner.

3.03 UTILITIES

A. Various water mains, electrical conduit, gas mains, process piping, storm sewers, drains, telephone conduits and other underground and overhead utilities are located in and adjacent to the Contract area.

In all cases, whether underground structures or utilities have or have not been delineated, the Owner and Engineer accept no responsibility for their location and such locations as shown are to be considered approximate only.

B. In some instances, and in order to conform with the OSHA requirements, power lines may have to be temporarily de-energized or relocated. This work will normally be performed by the respective utility company and compensation shall be made at a rate equal to the Utility company's invoiced bill, plus 15% thereof to cover all of the Contractor's items of expense and profit. If the utility company allows the Contractor to perform any or all of the work described above, compensation for that portion shall be paid for as specified under EXTRA WORK. Compensation for relocation of utilities will be made only when so approved by the Engineer, prior to the prosecution of that portion of the Work, to relocate a utility. Where utilities are relocated or otherwise worked on, due to the Contractor's negligence, or strictly for the convenience of the Contractor, no compensation will be made therefor.

C. Ensure that utility valve boxes and manholes are readily accessible at all times. Do not store materials over such facilities. Should it become necessary to cover boxes or manholes with spoil, devise a method for locating them quickly, and assist the utility company in uncovering them. All such facilities shall be left uncovered during non-working hours.

D. Use proper caution when excavating in and around utility service facilities. Machine excavation shall not come within one and one-half (1-1/2) feet from the designated location of a utility line except for pavement materials when in a roadway. After locating and verifying the location of the utility line, utilizing hand tools, the Contractor may proceed with the careful use of power equipment.

E. If an underground facility is accidentally contacted or disturbed, immediately notify the utility owner. Take protective measures as required by the owner of the utility. The Contractor shall make good all direct or indirect damage that may be done to any utility structure in the execution of the Work. The liability of the Contractor is absolute and is not dependent upon any question of negligence on his part or on the part of his agents, servants, or employees. The absence of any order from the Engineer directing the Contractor to take any particular precaution, or to refrain from performing any particular action, shall not excuse the Contractor in case of such damage. Special precautions shall be taken by the Contractor to protect his men, equipment and property of others while working in the vicinity of utilities.

F. Prior to backfilling, respective utility representatives shall be given an opportunity to inspect all uncovered facilities. Damaged utilities will be repaired by the respective utility company before backfilling, all at the Contractor's expense.

G. Where underground utilities, except for existing storm and sanitary sewers, conflict with the Contract Work, the work involved in relocating or otherwise modifying such existing utilities will in general be performed by the respective utility companies. The Contractor shall provide every means of access to accommodate the utility companies in the performance of their work. The Contractor shall pay the utility company's bill for the relocation work and compensation therefor shall be as described in Paragraph B above.

H. Additional earth excavation and backfill required for the relocation of utilities shall be provided by the Contractor unless otherwise required by the utility company.

END OF SECTION

NO TEXT
THIS PAGE WAS INTENTIONALLY LEFT BLANK

PART 1 - GENERAL

1.01 DESCRIPTION

A. This Section covers general requirements for products and the criteria which must be met by Contractor when he desires to utilize substitute products. In order to determine the total requirements of each Specifications Section, this Section shall be used in conjunction with all other Sections and the requirements contained herein shall be in addition to the requirements set forth in all other Sections.

1.02 QUALITY ASSURANCE

A. In addition to Contractor's warrantees and guarantees on materials and equipment required under the General Conditions, Contractor is solely responsible to see that all materials, equipment, products and the finished Work complies accurately and completely with the Contract Documents. Contractor should test and inspect all materials and items of Work prior to ordering and installation, to satisfy himself that all Contract requirements are being met.

B. The Engineer may check all or any portion of the Work and Contractor shall afford all necessary assistance to Engineer in carrying out such checks. Such checking by Engineer shall not relieve Contractor of any responsibilities for the accuracy or completeness of the Work.

C. Should any dispute arise as to the quality or fitness of workmanship, equipment, materials or articles, the decision shall rest with Engineer, and shall be based upon the requirements of this Contract.

1.03 SUBMITTALS

A. Promptly submit guarantees set forth in relevant Sections of the specifications for equipment and items of work.

1.04 GUARANTEES

A. Whenever a manufacturer, supplier or other person or firm furnishes, offers to furnish or normally furnishes a guarantee, whether required by the Specifications or not and no matter how long the guarantee period is, Contractor shall accept or secure all such guarantees and furnish same to Engineer. Contractor shall also fill out and send to manufacturers all warranty and guarantee documents required by them in order to affect such warranties and guarantees, with a copy to Owner.

B. All guarantees and warranties shall be effective for the maximum period as follows:

1. As specified elsewhere herein for specific products.

2. For a period of one year from the date of completion of the Work.

3. For the time period normally guaranteed or warranted by the manufacturer.

PART 2 - PRODUCTS

2.01 MATERIALS AND EQUIPMENT

A. All materials, equipment and accessories shall be new and unused and shall be essentially the standard product of a manufacturer of established good reputation and regularly engaged in the production and fabrication of such material or equipment.

B. Owner reserves the right to reject any material or equipment manufacturer who, although he appears to be qualified and meets the technical requirements, does not provide satisfactory evidence indicating adequate and prompt post-installation repair and maintenance service, as required to suit the operational requirements of Owner.

C. Whenever it is required that Contractor shall furnish materials or manufactured articles or shall do work for which no detailed specifications are set forth, the materials or manufactured articles shall be of the best grade in quality and workmanship obtainable on the market from firms of established good reputation, or, if not ordinarily carried in stock, shall conform to the usual standards for first-class materials or articles of the kind required. Perform Work in full conformity and harmony with the intent to secure the best standard of construction and equipment of the Work as a whole or in part.

2.02 NAMEPLATES

A. Each unit of equipment shall have the manufacturer's name or trademark on a corrosion-resistant nameplate securely affixed in a conspicuous place. The manufacturer's name or trademark may be cast integrally with stamp, or otherwise permanently marked upon the item of equipment. Such other information as the manufacturer may consider necessary for complete identification shall be shown on the nameplate.

2.03 SUBSTITUTIONS

A. Names - The Drawings and Specifications list acceptable manufacturers, commercial names, trademarks, brands and other product, material and equipment designations. Such names are provided to establish the required type, quality and other salient requirements of a procurement.

B. Equals - An item equal to that named or described on the Drawings or in the Specifications may be provided by Contractor if approved by the Engineer.

C. Submissions - When Contractor wishes to propose a substitute, he shall make written application to Engineer for approval of such a substitute certifying in writing that the proposed substitute will perform adequately the functions called for by the general design, be similar and of equal substance to that specified and be suited to the same use and capable of performing the same function as that specified; stating whether or not its incorporation in or use in connection with the Project is subject to the payment of any license fee or royalty; and identifying all variations of the proposed substitute from that specified and indicating available maintenance service. Contractor shall further submit complete descriptive literature and performance data together with samples of the materials, where feasible. Include full information concerning differences in cost. **Any savings in cost resulting from substitutions shall be passed on to Owner and all additional costs shall be borne by Contractor.**

D. Determination of Equals - In all cases, Engineer shall be the sole judge as to whether a proposed product is to be approved and Contractor shall have the burden of proving the same, at his own cost and expense, to the satisfaction of Engineer. The Contractor shall abide by Engineer's decision when proposed substitute items are judged to be unacceptable and shall, in such instances, propose another substitute or furnish the item specified or indicated. A proposed product which utilizes more energy is sufficient cause for immediate rejection. The Contractor shall have and make no claim for an extension of time or for damages by reason of the time taken by Engineer in considering a substitution proposed by Contractor or by reason of the failure of Engineer to approve a substitution proposed by Contractor.

E. Use of Substitutes - No substitute shall be ordered or installed without the written approval of Engineer nor without such performance guarantee and bonds as Owner may require, which shall be furnished at Contractor's expense.

F. Redesigns - The designs shown on the Drawings are based upon the dimensions, weight, performance and other characteristics of the product(s) so named in the Schedules or otherwise of the first acceptable manufacturer listed under the product specified. The use of a product by

any other acceptable manufacturer or by a manufacturer proposed by Contractor and accepted by Engineer may require changes in dimensions, elevations, structures, auxiliary equipment, piping, electrical, mechanical, controls or other Work to provide a complete satisfactory operating installation. The Contractor shall submit to Engineer, for approval, all necessary drawings and details showing such changes to verify conformance with the overall plant structural and architectural requirements and overall plant operating performance. The Contract Price shall include all costs in connection with the preparation of new drawings and details and all changes to construction work to accommodate the proposed equipment and including all engineering expenses in connection therewith.

G. The design shown on the Drawings and specified herein are based on the use of particular products. The cost of all redesign necessary to permit the use of a proposed substitute product shall be borne solely by the Contractor. Such redesign, at the Engineer's option, may be performed by the Engineer. Compensation to the Engineer for services rendered in connection with redesigns and determinations of equals shall be at the Engineer's standard fee schedule, which amounts shall be paid to the Engineer by the Owner and deducted from monies due or to become due the Contractor under this Contract.

H. **As the Engineer is the sole judge as to the determination of equals and since the magnitude of the expenses involved for redesign or modifications may be difficult to determine during the bidding period, the Contractor is advised to base his bid on the manufacturers specified.**

PART 3 - EXECUTION

3.01 INSPECTIONS - PREPARATIONS

A. Prior to work under any Section, carefully inspect the Work of all other trades and verify that all such Work is in conformance with the Contract Documents and is complete to the point where the Work under that Section may properly commence. Extreme care shall be exercised so as to avoid the need to remove and replace Work and to avoid unnecessary cutting and patching.

B. Inspect all surfaces to be sure that they have been properly prepared before applying new Work to such surfaces.

C. Make all required measurements in the field to ensure proper and adequate fit of all items.

D. Verify that all Work can be installed in strict accordance with the Drawings and the approved shop drawings. Immediately report discrepancies to Engineer.

E. Do not proceed with the Work under any Section until conditions are proper.

3.02 INSTALLATION/APPLICATION/PERFORMANCE/ERECTION

A. All materials and equipment shall be applied, installed, connected, erected, used, cleaned and conditioned in accordance with the instructions of the applicable manufacturer, fabricator or processors, except as otherwise provided in the Contract Documents.

B. All Work shall be done in a workmanlike manner and set to proper lines and grades.

C. Where performance criteria are specified, do all Work necessary to attain the required end results.

3.03 FIELD QUALITY CONTROL

A. Neither observations by Engineer nor inspections, tests or approvals by other persons shall relieve Contractor from his obligations to perform the Work in accordance with the requirements of the Contract Documents.

B. If the Contract Documents, laws, ordinances, rules, regulations or orders of any public authority having jurisdiction require any Work to specifically be inspected, tested or approved by some public body, Contractor shall assume full responsibility therefor, pay all costs in connection therewith

and furnish Engineer the required certificates of inspection, testing or approval.

C. The Owner reserves the right to independently perform laboratory tests on random samples of material or performance tests on equipment delivered to the site. These tests, if made, will be conducted in accordance with the appropriate referenced standards or Specification requirements. The entire shipment represented by a given sample, samples or piece of equipment may be rejected on the basis of the failure of samples or pieces of equipment to meet specified test requirements. All rejected materials or equipment shall be removed from the site, whether stored or installed in the Work, and the required replacements shall be made, all at no additional cost to Owner.

3.04 ADJUST AND CLEAN

A. Upon the completion of installations, and as a condition of its acceptance, visually inspect all Work, adjust all components for proper alignment and use and touch-up all abrasions and scratches to make them completely invisible.

B. Thoroughly examine all materials and equipment with protective or decorative finishes for defects and damage prior to being covered. In the case of buried items of Work, restore protective surface covers so as to conform to the Contract requirements prior to being backfilled, buried or embedded, as the case may be. In the case of exposed items of Work, for which a decorative finish is required, all scratches, discolorations, unmatched colors, disfigurations, and damages shall be repaired and touched-up so as to provide a neat, clean finish, uniform in color.

3.05 UNCOVERING WORK

A. Unless otherwise specified or directed by Engineer, no Work shall be covered until it has been inspected, tested, and authorized to be covered by Engineer. If any Work is covered without the consent of Engineer, it must, if requested by Engineer, be uncovered for his observation and replaced at Contractor's expense.

B. If any Work has been covered with Engineer's consent and Engineer considers it necessary or advisable that covered work by inspected or tested, Contractor, at Engineer's request, shall uncover, expose or otherwise make available for observation, inspection or testing as Engineer may require, that portion of the Work in question, furnishing all necessary labor, material and equipment. If it is found that such Work is defective Contractor shall bear all the expenses of such uncovering, exposure, observation, inspection and testing and of satisfactory reconstruction, including compensation for additional engineering services, and an

appropriate deductive Change Order shall be issued. If, however, such Work is not found to be defective, Contractor shall be allowed an increase in the Contract Price or an extension of the Contract Time, or both, directly attributable to such uncovering, exposure, observation, inspection, testing and reconstruction if he makes a claim therefor as provided in the General Conditions.

3.06 PROTECTION

A. During the progress of the Work, and up to the date of final acceptance, Contractor shall be solely responsible for the care and protection of all Work and materials covered by this Contract. All work and materials shall be protected against damage or loss from any cause whatsoever and Contractor shall rebuild, replace, restore and make good all injuries, losses, damages, re-erection and repairs occasioned or rendered necessary, to all or any portions of the Work, and at Contractor's expense.

B. Neither Owner nor any of its officers, employees or agents assume any responsibility for collecting indemnity from any persons causing damage to the Work of Contractor.

3.07 DEFECTIVE WORK

A. The repair, removal, replacement and correction of defective Work is a part of this Contract and shall be promptly done in accordance with the requirements set forth in the General Conditions. All costs in connection with the correction of defective Work shall be borne by Contractor.

B. Any item of equipment which fails to maintain the performance or other salient requirements of these specifications, shows undue wear, or other deleterious effects during the maintenance period, shall be considered defective.

END OF SECTION

NO TEXT
THIS PAGE WAS INTENTIONALLY LEFT BLANK

PART 1 - GENERAL

1.01 DESCRIPTION

A. This Section covers the requirements for performing leakage tests on process tanks and pipelines and is one of the several bases for acceptance of the Work.

B. All pressure pipes and non-pressure pipes shall be tested for leakage.

C. Definitions:

1. Leakage (or exfiltration) - The quantity of water to be supplied into the newly laid pipe or tank, any valved section thereof, or other appurtenance, necessary to maintain the specified leakage test pressure after the pipe has been filled with water and the air expelled.

2. Infiltration - The quantity of water which enters into any pipe or other appurtenance when the static groundwater elevation is at the minimum elevation above the pipe or appurtenance as specified hereinafter.

1.02 QUALITY ASSURANCE

A. Prior to final acceptance of the Work, all process tanks, pressure pipes and non-pressure and non-pressure pipes shall meet specific leakage requirements of Westchester County Department of Public Works and Westchester County Department of Health, as a minimum. These leakage requirements must be satisfied by the basic materials alone. Where joint fillers and the like have been specified, primarily to protect jointing materials, and secondarily to provide a factor of safety, they shall not be applied until after leakage tests have been completed and have been accepted by Engineer.

B. Every test must be witnessed by Engineer and any test not so witnessed will be considered as not having been performed. Contractor shall pretest the Work and shall not request Engineer to witness the final test until he is reasonably certain that the test will yield results within the acceptable limits.

C. No work shall be closed or covered up until it has been duly inspected and approved for proper and satisfactory construction and installation, and compliance with Plans and Specifications. Should incomplete or unapproved work be covered, the Contractor shall, at his own expense, uncover all work so that it may be properly inspected and approved. After such inspection and approval, he shall properly

repair and replace all work found defective, unsatisfactory, and not in accord with the Plans and Specifications, and after such repair and replacement, he shall bring all work to the completeness and status as it was before it was closed and covered, all at his own expense.

D. Successful completion of required tests shall be in no way interpreted as relieving the Contractor of responsibility for defects which become apparent subsequent to the time of testing. It shall be the sole right of the Engineer to determine whether defects exist and the Contractor shall retest all portions of the Work deemed necessary by the Engineer prior to final approval of the Project.

1.03 SUBMITTALS

A. See Section 01300.

B. Complete details and specifications on testing apparatus.

C. Certified test results on forms approved by Engineer.

1.04 SEQUENCING AND SCHEDULING

A. Notify Engineer at least 48 hours in advance of a scheduled test so that the test may be witnessed.

B. Test process tanks prior to backfilling.

C. Test underground gravity and pressure piping as soon as the pipe is laid and prior to backfilling.

D. At Engineer's discretion, additional sections of pipelines may be required to be tested as soon as pipe is laid and prior to backfilling when working conditions or the standard of workmanship have been altered.

PART 2 - MATERIALS

2.01 TESTING APPARATUS

A. Provide all labor, pumps, plugs, measuring equipment and other apparatus, complete, and as required to perform all testing.

B. Provide clean water, air, nitrogen and other materials as required to accomplish all testing.

C. Provide plugs and caps capable of withstanding the test pressures.

D. Provide all temporary flanges, plugs, bulkheads, thrust blocks, weighing, bracing and other items necessary to prevent joints from separating, and to prevent any injuries or damage.

PART 3 - EXECUTION

3.01 PREPARATION

A. Pipe Displacement Tests - Provide one person to assist Engineer in conducting pipe displacement tests prior to performing leakage tests.

B. Bracing Pressure Piping - Plug open ends, adequately block bends, tees, ends, and other fittings, and do whatever is necessary to brace the piping system so that it will safely withstand the pressures developed under the tests and so that no damage or injury will occur to the pipeline, people or property.

C. Protection - Before tests are conducted, isolate or remove any regulator, gauge, trap, or other apparatus or equipment which may be damaged by test pressures.

3.02 GENERAL

A. Trapped Air - Trapped air may cause a false indication of the rate of leakage. Points of concern include ends of lines, stubs, and high points in pipelines. No credit will be made for this condition and no adjustment will be made to the allowable leakage. Where trapped air is suspected of causing a test failure, do whatever is necessary to evacuate the air and repeat the tests until the actual leakage is equal to or less than the allowable rate of leakage.

B. Water Absorption - No credit will be given for absorption of water in pipe and manhole walls. If necessary, fill pipes and tanks with water well in advance of testing and allow them to soak in order to eliminate or minimize the effects of absorption.

3.03 TESTS FOR NON-PRESSURE PIPING AND PROCESS TANKS

A. General

1. Leakage shall be determined by exfiltration testing. Engineer reserves the right to require infiltration testing.

2. Air testing of non-pressure piping is not permitted except for locating points of leakage and where pipes cannot be hydrostatically tested.

3. Leakage testing shall include the process tanks, connecting non-pressure pipe, and all other appurtenances on the section being tested.

4. Generally limit test sections to non-adjacent structures. Tanks and manholes may be tested simultaneously with pipes.

5. Adequately plug ends of all structure connections, stubs and all other openings from which water may escape.

6. Use clean water for exfiltration tests.

7. Determine groundwater levels by installing test holes or test pits at intervals not to exceed 1,000', when directed by Engineer.

B. Exfiltration Test On Pipes and Tanks

1. The minimum water level required for testing pipes and tanks is the higher of either 4' above the crown of the upstream (highest) end of the pipe being tested and 1 ft. from the top of each process tank structure. Where such a water level will produce an internal hydrostatic pressure in excess of the capabilities of the piping system, Engineer will prescribe test modifications or require that other methods of testing be utilized.

2. For pipe testing, install a watertight plug in the downstream end and a watertight plug in the upstream end fitted with a 2" diameter, clear rigid tube installed in a vertical position to facilitate observation of water levels. Tube shall be long enough to obtain the required head and made of extruded

Lucite acrylic, Polycarbonate (Lexan), Tenite butyrate or other plastic material. Glass is unacceptable.

3. Fill pipe with water and conduct test, continually adding water from a graduated container to keep water in tube at a constant level.

4. Upon satisfactorily completing the test, remove the downstream plug in the presence of Engineer. Do not touch nor remove the upstream plug until approved by Engineer. Remove test water from tanks to a level determined by the Engineer.

3.04 TESTS FOR PRESSURE PIPES

A. General

1. Leakage testing shall include the main exiting pipe, service connections, and all other appurtenances on the section of pipeline being tested.

2. All pipes shall be tested prior to applying insulation and before they are concealed or furred-in.

3. Provide all necessary gauges. Gauges shall be standard pressure type with a minimum 6" diameter dial and a pressure range not in excess of 50% of the maximum required test pressure.

4. Provide and maintain at the site a gauge stand with an approved laboratory calibrated test gauge. Periodically check test gauges used for testing against the test gauge, and whenever requested by Engineer.

5. Where it is absolutely necessary for testing, tap pipes and insert approved plugs after testing is completed.

6. Provide a hand or motor driven pump to maintain the required test pressure constant throughout the duration of the test. If a water pump is used, pump water from a container with a known volume of water. If an air or inert gas pump is used, leakage shall be determined and calculated by the cycling of the pump.

B. Underground Pipes

1. Conduct leakage test in accordance with AWWA C600.

3.05 ALLOWABLE LEAKAGE

A. The maximum allowable leakage for the various process tanks and piping systems is contained on the form LEAKAGE TESTING REQUIREMENTS, attached to this Section or as determined by the Regulatory Agencies.

B. It is the intent of this Contract to secure piping systems with leakage, in each section of pipe and within each structure, equal to, or less than that specified. It is also the intent to secure a piping system free from visible drips, streams, and leaks. Therefore, even if a portion of the system meets the requirements for allowable leakage, visible leaks are not permitted and shall be stopped.

C. Leakage tests will be considered satisfactorily passed when the rate of leakage is equal to or less than the stipulated allowances, there is no evidence of visible leaks, and there is no evidence of other system defects.

3.06 RETESTING

A. Pipes and tanks not passing the tests shall have all defects corrected to the satisfaction of Engineer, and shall be retested and recorrected as often as is necessary until the test requirements have been met.

B. It is the intent of this Contract to obtain work meeting test requirements on their own and solely through the use of the normal integral sealing components. Joint leaks shall not be stopped through the use of concrete, caulking, mortar, or other patching materials. Leaking pipe joints shall be rejoined or replaced if necessary.

C. Methods other than rejoining, resetting or replacing joint seals shall require the written approval of Engineer.

LEAKAGE TESTING REQUIREMENTS

ITEM TESTED	TEST Testing Fluid	TEST Pressure	TEST Duration Hrs.(2)	ALLOWABLE LEAKAGE(1) Underground/Exposed Infil	ALLOWABLE LEAKAGE(1) Underground/Exposed Exfil
NON-PRESSURE PIPING					
Less than 75' from water(3)	WATER	4'	4	-	25
	WATER	4'		25	-
Between 75-200' from water(3)	WATER	4'	4	-	50
	WATER	4'		50	-
More than 200' from water(3)	WATER	4'	4	100	
	WATER	4'		100	
PRESSURE PIPING (See Notes 4, 5 and 6)	100 psig			-0-	-0-

----------NOTES----------

1. Maximum allowable leakage in gallons/day/inch diameter/mile of pipe. Where a percentage is shown, the loss shall not exceed the percentage of the starting test pressure.

2. After steady state flow conditions exist, a sufficient amount of time to accurately determine the leak.

3. Water means a well, a water supply, or any surface water.

4. Test 200 psig for 30 minutes. After correction of any defects, test at 50 psig for 6 hours.

5. Nitrogen may be used in lieu of air.

6. Water for pipes carrying liquids, air or nitrogen for lines carrying gases.

END OF SECTION

NO TEXT
THIS PAGE WAS INTENTIONALLY LEFT BLANK

PART 1 - GENERAL

1.01 DESCRIPTION

A. This Section contains the general requirements for maintaining the site, buildings and the Work in a neat, clean condition at all times.

1.02 CLEANING UP

A. At all times, maintain the premises and the site free from accumulations of waste materials and rubbish and litter caused by Contractor's employees or Work, or the employees or work of any of his subcontractors.

B. On or before completion of the Work, thoroughly clean all pits, pipes, manholes, channels, tanks, chambers, conduits, handrails, grating and all other items of Work and the premises entered upon, and dismantle and remove all temporary structures, tools, scaffolding, surplus materials, supplies, equipment and rubbish.

C. Should Contractor fail to comply with the requirements of this paragraph within twenty-four hours after written notice from the Engineer, then Owner may perform whatever work is necessary by whatever means he may deem expedient and all expenses incurred by Owner will be charged to and paid for by Contractor.

D. Keep buildings, structures and other enclosed areas free from unattended combustible material and leave the Work "broom clean".

E. Keep interior surfaces free from debris and accumulated materials.

PART 2 - PRODUCTS
(NOT UTILIZED)

PART 3 - EXECUTION
(NOT UTILIZED)

END OF SECTION

NO TEXT
THIS PAGE WAS INTENTIONALLY LEFT BLANK

PART 1 - GENERAL

1.01 DESCRIPTION

A. Work covered by this Section includes site grading as may be required to properly conduct the work required to construct this project as shown on the drawings.

B. Definitions: See Section 02221.

1.02 QUALITY ASSURANCE

A. All finished grades shall be as shown on the Drawings or as specified by the Engineer.

B. When placing fill or constructing embankments, moisten or dry fill material to the proper moisture content as determined by ASTM D1557, Method C.

1.03 SUBMITTALS

A. See Section 01300.

B. Certified copies of all results of maximum density tests and field compaction density tests.

C. Gradations of gravel for pavements.

D. Gradations of other materials to be used.

1.04 DELIVERY, STORAGE AND HANDLING

A. Delivery of borrow materials to the site or removal of soil from the site shall be done in a manner which will not cause any nuisance or allow spillage of materials from the transporting vehicle.

B. Materials which are required to be stored shall be stored in an orderly manner and at a sufficient distance away from banks of excavations and trenches to avoid overloading and prevent slides or cave-ins. Do not store materials on, over or adjacent to structures or utilities which may collapse due to the added weight.

C. Promptly remove materials not specified to be stored or reused. Burning of materials at the site is not permitted.

D. Obstruction of roads, driveways, sidewalks or interference with drainage, leaching pools, gutters, ditches or drainage channels with stored material is not permitted. If materials cannot be stored at the site to avoid such obstructions and interferences, they shall be stored away from the site and brought back when and as needed.

E. No material shall be excavated, stored or grade in regulated wetlands or open State waters unless so permitted by State Wetlands or dewatering permits.

1.05 JOB CONDITIONS

A. Keep ground surface well drained but avoid erosion. Do not place fill in water or over ice or snow.

B. Filling with frozen materials or when materials already in place are frozen, is not permitted.

C. All disturbed soil or stock piled materials shall be protected against erosion immediately after disturbance is completed or soil stockpiled. Proper soil erosion and sediment control measures shall be in place in a timely manner as required by the Engineer, Owner, Regulatory Agencies or as specified in the Soil Erosion and Sediment Control Permit.

D. Minimum soil erosion and sediment control measures shall include but not be limited to installation of desilting basins, scour holes, hay bales, silt fences, hydro seeding, mulch with tack coating, etc.

1.06 SCHEDULING AND SEQUENCING

A. Schedule the Work with Engineer and afford him adequate time and space to make all required inspections.

B. Schedule work and coordinate operations with the approved testing laboratory. If the laboratory cannot be available to perform required tests, grading and filling operations may have to be delayed in order to accomplish certain field tests.

PART 2 - PRODUCTS

2.01 FILL MATERIAL

A. Unless otherwise specified or directed by Engineer, all fill material shall be structural fill as specified in Section 02221.

B. To the extent it is available, fill material shall consist of approved on-site materials. When there is insufficient approved materials on-site, import approved additional material from off-site, at no additional cost to the Owner.

PART 3 - EXECUTION

3.01 INSPECTION

A. Verify that all boundaries of temporary and permanent easements and property lines are clearly marked in the field and that the Work will not violate these boundaries.

B. Ascertain and verify the locations and character of structures, underground lines and subsurface conditions and verify that the Work will not adversely affect them.

C. Employ a competent surveyor to provide adequate benchmarks in the vicinity of the work to provide all workmen including subcontractor with proper horizontal and vertical control to ensure all fills, cuts, structures, utilities, etc. are constructed at the proper location and elevations.

D. Provide copies of all field survey notes to the Engineer/Owner for his use in observing the construction.

E. Verify that grade stakes have been properly and accurately set prior to commencement of work.

F. Do not begin operations until conditions are satisfactory.

3.02 DISPOSAL OF MATERIALS

A. Use approved on-site materials to the extent they are available.

B. Remove from the site all unsuitable material encountered during construction. Do not store or stockpile unsuitable material at the Project site and do not incorporate unsuitable material into the Work.

3.03 SITE GRADING

A. Rough grade the portions of the site which must be raised or lowered in order to properly execute the work under other Sections.

B. Uniformly grade the work area to the lines, grades and elevations shown on the Drawings. Finished surfaces shall be reasonably smooth, compacted and free from irregular surface changes. Unless otherwise specified, the finish shall be equivalent to that ordinarily obtainable from either blade grader or scraper operations.

3.04 PREPARATION OF PAVEMENT SUBGRADES

A. Shape the entire sub grade to the required line, grade and cross section. Remove and dispose of all soft and unsuitable material and replace with an approved material. Remove and dispose of all boulders and ledge rock. Break off to a depth of not less than 6" below the sub grade. Fill resulting depressions with an approved material.

B. Roll sub grade with a roller weighing not less than 10 tons and achieve the required compaction densities specified in Section 02250. Reshape, wet and aerate sub grade, as required. Compact the entire width of the area to receive pavement, plus the areas within 5' of and parallel and adjacent to the edges of the pavement. Compact the full depth of embankments to the required density. Where cuts are encountered, thoroughly roll and compact until no further consolidation is apparent.

C. When pavements cannot be placed immediately after the preparation of the sub grade, the entire sub grade shall be reshaped and compacted to the required line, grade and cross section.

D. After rolling, the surface of the sub grade shall not show any deviation in excess of 3/8" when tested with a 10' straightedge applied both parallel to and at right angles to the centerline of the area. The elevation of the finished sub grade shall not vary more than 0.05' from the established grade and cross section.

E. Do not disturb the finished sub grade by traffic or other operations and protect and maintain in a satisfactory condition until the overlying pavement is placed.

3.05 SUBGRADE PROTECTION

A. Keep excavations shaped and well drained. Where ruts or erosion occur, add additional fill and reshape and recompact before placing paving materials.

B. The storage or stockpiling of material on prepared sub grades is not permitted.

C. All sub grades will be inspected by Engineer and paving materials shall not be placed prior to receipt of Engineer's approval. The placing of paving materials on a muddy, spongy, weaving or frozen sub grade is not permitted.

3.06 FIELD QUALITY CONTROL

A. Soils testing shall be performed by the approved independent testing laboratory in accordance with Section 02250 - Soil Compaction.

B. Engineer will establish the date, time, location, number, and types of soils tests required.

END OF SECTION

NO TEXT
THIS PAGE WAS INTENTIONALLY LEFT BLANK

PART 1 - GENERAL

1.01 DESCRIPTION

A. Work covered by this Section includes excavating, trenching and backfilling for the installation of underground lines, structures and foundations.

1.02 QUALITY ASSURANCE

A. Moisten or dry backfill to the proper moisture content as determined in accordance with ASTM D1557, Method C.

B. All sub grades shall be approved by Engineer before pipes or structures are installed or concrete is placed.

C. Provide and maintain suitable temporary crossings over open trenches.

D. When excavating in or adjacent to the traveled roadway, take whatever measures are necessary to protect the road surfaces from becoming undermined.

E. The Owner and Engineer do not guarantee that all required excavation can be executed by use of machinery. In some cases, after execution of test pits, it may be necessary to revise proposed alignments, which may preclude the use of machinery.

F. The Contractor, without permission of the Engineer, shall not remove from the line of the Work, before all backfilling has been completed, any sand, gravel, earth, or any material which may be suitable and required for the refilling or construction. All excess material, including rock, stone, earth, and pipe shall be removed and the surrounding area thoroughly cleaned. All excess excavated materials shall be hauled to and disposed of at the place or places as designated by the Owner.

G. The existing ground elevations as shown on the Drawings are believed to be reasonably correct. The Contractor shall satisfy himself, however, by actual examination of the sites of the Work, as to the existing elevations and the amount of work required under this Section.

H. Where pavement, curbing, sidewalk and/or utilities exist and where the soil characteristics are such that appropriate side slopes of the trench cannot be maintained, the Contractor shall furnish and place adequate sheeting and bracing.

I. The Contractor is advised that the use of a steel box will not be approved as a substitute for sheeting. Under proper conditions, it may be approved for use to satisfy certain obligations of the Contractor as required for protection of personnel.

1.03 SUBMITTALS

A. See Section 01300.

B. Gradations of other materials proposed for use in the Work.

C. Details of proposed sheeting shall be submitted to the Engineer. No sheeting shall be installed until written acceptance is received from the Engineer. Design and supporting calculations shall be prepared and signed and sealed by a registered New York State Professional Engineer retained by the Contractor.

1.04 DELIVERY, STORAGE AND HANDLING

A. Store excavated materials meeting the requirements for backfill in an orderly manner at a sufficient distance away from banks of excavations and trenches to avoid overloading and to prevent slides or cave-ins. Do not store materials on, over or adjacent to structures or utilities which may collapse or become damaged due to the added weight. Remove excess excavated material promptly and dispose of away from the work site.

B. Promptly remove materials not specified to be stored or reused. Burning of materials is not permitted.

C. Obstruction of roads, parking lots, driveways, sidewalks or interferences with drainage along gutters, ditches or drainage channels with stored material is not permitted. If materials cannot be stored to avoid such obstructions and interferences, they shall be stored away from the work area and brought back when and as needed.

D. No construction activity, access, storage or other use shall take place beyond the limiting boundaries as shown on the Drawings or if not shown as directed by the Engineer, the Engineer may require the Contractor to install and maintain moveable 6’ chain link fences along the boundaries, where such boundaries are violated.

1.05 JOB CONDITIONS

A. Maintain excavations and trenches free of groundwater, sewage, storm water, ice and snow during the progress of the Work and until the finished Work is safe from injury.

B. Protect sub grades against freezing by means of insulated blankets, salt hay, or other methods.

C. Backfilling with frozen materials or when materials already in place are frozen is not permitted.

1.06 SCHEDULING AND SEQUENCING

A. Do not backfill until the following conditions are met:

1. Work in General - Engineer and testing laboratory have completed all inspections and tests.

B. Except as noted above, or required by other Sections, or when approved or directed by Engineer, backfill pipe excavations as soon as the pipe has been inspected and alignment tested and accepted by the Engineer. Backfill other excavations as soon as possible after all inspections and tests have been completed and above requirements have been met. Pressure and leakage testing at the discretion of the Engineer may be performed before or after backfilling.

1.07 TESTING

A. Refer to FIELD QUALITY CONTROL in Part 3 of this Section, and the various other sections relating to particular materials and methods.

B. Laboratory testing for compliance with Specification requirements shall be conducted by an approved independent laboratory acceptable to the Engineer. Testing shall be performed as specified in FIELD QUALITY CONTROL, in the number and places as designated by the Engineer to assure compliance with the Specifications.

PART 2 - PRODUCTS

2.01 MATERIALS AND DEFINITIONS

A. Concrete Excavation - Excavation of solid concrete structures or pavements, including reinforcement and the necessary treatment thereto, which is of sufficient size and strength such as not to be readily removable in the same manner as earth excavation, which shall require cutting with a masonry saw, and which shall specifically exclude loose concrete rubble.

B. Earth - Clay, loam, sand, gravel, topsoil, and other materials not classified as rock, boulders, masonry, or concrete.

C. Backfill General Fill or General Backfill - Earth which shall specifically exclude all organic and perishable materials, frozen materials, stones larger than 3" in diameter (for structure backfill) or 6" in diameter (pipe trench backfill), and having no more than 10% of such stones, rocks, cobbles, or boulders. In the area around pipes and to 1' above the pipe, no pebbles over 1" in diameter shall be present.

D. Select Fill or Select Backfill - Sand, gravel, and similar amounts of stones, pebbles, or lumps not over 2" in largest dimension, and which does not contain clay, loam, organic material, debris, or frozen material.

E. Granular (Structural) Fill - Clean well-graded mixture of sand and gravel, conforming to the following gradation:

Sieve Size	Percent Finer by Weight
4"*	100
#4	30-85
#40	5-50
#200	0-8

* Maximum size shall be smaller where necessary for fine grading.

F. Gravel or Crushed Stone - Clean, granular material, having a minimum particle size of 1/4" and a maximum particle size of 3/4", and which shall be roughly angular in nature, with minimal roundness at particle edges and corners, and which shall specifically exclude "pea gravel", unless otherwise noted.

2.02 TIMBER

A. All timber for sheeting, lagging, soldier beams, and foundations, which will remain in the Work, shall conform in quality to what is known as merchantable lumber and shall be sound, live timber, free from sap, large cracks, shakes, loose or decayed knots, worm holes and other imperfections which may impair its strength or durability.

2.03 STEEL

A. Steel Sheet Piling- ASTM A328.

B. Steel Shapes - ASTM A36.

C. The finished material shall be free from injurious defects and shall have a workmanlike finish.

PART 3 - EXECUTION

3.01 PREPARATION

A. Prior to Work of this Section, become thoroughly familiar with the site conditions and all portions of the Work covered by this Section.

B. Ascertain and verify the locations and character of structures, underground lines and subsurface conditions and verify that the work will not adversely affect them.

3.02 TRENCH

A. General - The bedding required for underground pipe is specified in Sections 02610, 02705 and 02706.

3.03 EXCAVATING

A. Excavate for structures, tanks, pipes and sub-grades for pavement restoration or construction to the elevations indicated on the Drawings or as required and extend a sufficient distance from foundation walls, piers, footings and curbs to provide adequate clearances for construction operations, including sheeting and bracing, if required, and for inspection purposes.

B. Where unsuitable materials not meeting structural fill requirements extend below planned bearing levels, the unsuitable material shall be removed as required.

C. Trim approximately the last four inches of excavation sub-grade in earth with a smooth edged bucket or by hand just prior to placement of concrete or concrete reinforcement.

D. The Contract price shall include excavation to the specified structure, pipe line, tank, and pavement sub grade.

E. The Contract price shall include excavating and disposing of unsuitable soils, furnishing, placing and compacting granular (structural) fill, dewatering, and other related work.

3.04 SHEETING AND BRACING

A. Provide and maintain adequate sheeting and bracing as required for the safety and protection of the Work, persons and adjacent property and structures in accordance with Federal, State and Local laws, codes, ordinances and standards.

B. Engineer may, at his discretion, order sheeting and bracing to be cut-off and left-in-place. Where, in the opinion of Contractor, damage may result from withdrawing sheeting, he shall immediately notify Engineer for verification. Sheeting ordered left-in-place adjacent to piping shall be cut off not less than 12" over the top of the pipe.

C. Contractor is fully responsible for the adequacy of all sheeting and bracing used and for all damages resulting from improper quality, strength, placing, maintenance or removal of sheeting and bracing.

D. The Contractor shall be responsible for supporting and maintaining trenches and excavations. Provide adequate sheeting or shoring at the sides and end of excavations constructed of timbers or other ordered or specified.

E. All sheeting shall be continuous and shall be driven plumb at least twelve (12) inches below the proposed work unless otherwise specified, and where required, steel sheeting shall be properly interlocked. Special shapes shall be supplied for corners or changes in direction of steel sheeting and if required shall be built up by welding.

F. Where required, piling shall be driven to the full depth before excavation is started. Piling shall be of ample weight and cross section for the service intended and shall be adequately braced with timbers or structural steel. Timber sheeting shall be tongue and groove where necessary.

G. Trench sheeting shall be left-in-place until backfill has been carried to an elevation not less than twelve inches above top of pipe and shall then be cut off. The upper portion shall be removed unless otherwise directed. In quicksand, or soft ground, sheeting shall be driven to such depth below the bottom of trench as may be directed.

H. Soldier beams shall be driven vertically into the ground below the bottom of the proposed excavation. As excavation proceeds, lagging shall be placed between the flanges of the soldier beams. Walers and cross braces shall be erected as required. Soldier beams, lagging and bracing will not be considered to support and underpin adjacent structures.

I. Vibratory equipment shall not be used for sheeting extraction within 20 feet of a soil-supported structure.

3.05 MATERIALS

A. Remove unsuitable materials in excavations and trench bottoms, which are incapable of supporting pipes or structures, to the extent and depths directed by Engineer, and properly dispose of off-site. Refill and compact the excavation with Structural Fill. Refill and compact pipe trench with Select Fill.

B. Whenever the material encountered is, in Contractor's opinion, incapable of providing adequate support, he shall immediately notify Engineer for verification.

3.06 DISPOSAL OF EXCAVATED MATERIALS

A. All suitable excavated materials shall be utilized for backfill. All excess excavated material shall become the property of the Contractor. Dispose of said material as specified below.

B. All other surplus materials, rubbish, and material unsuitable for backfill, shall become the property of the Contractor and disposed of by him in a manner satisfactory to the Engineer. Site of said disposal shall be in accordance with all applicable local laws and ordinances. When so directed by the Owner, such disposal site shall be the local or regional landfill.

3.07 PREPARATION FOR BACKFILLING

A. Immediately prior to backfilling, remove all rubbish, debris, forms and similar materials from the excavation.

B. Do not backfill until the conditions of Paragraph 1.06 are met.

3.08 BACKFILLING TRENCHES

A. 12" Over Pipes - See Section 02610.

B. Remainder of Trench - Other Areas - Select Fill or General Backfill placed in not greater than 6" compacted layers, or as so required by road opening permits and/or the direction of the proper road authority.

C. During the Winter, Spring and Autumn months, protect the backfill material from frost. No payment will be made for additional backfill substituted for backfill material which has become frozen and unsuitable for use.

D. The Contractor is hereby advised that further limitations may exist that restrict the maximum permitted thickness of layers of backfill. Various municipal agencies have established rules and regulations governing the manner in which certain aspects of the required work may be accomplished. All such requirements shall be fulfilled by the Contractor.

E. Where required by governing agencies, utility companies, the Engineer, or as shown on the Drawings or designated in the Specifications, provide select backfill in lieu of standard backfill.

F. Where necessary to replace rock or other unsuitable material, furnish and place suitable backfill material, to the extent that such material is available from other portions of the Contract. If not available from other portions of the Contract, purchase additional backfill from an approved borrow pit.

G. Additional requirements for backfilling are specified under the various Sections covering pipe and paving.

3.09 FILLING AND BACKFILLING AT STRUCTURES

A. Against foundation walls uniformly spread and deposit backfill against walls in horizontal layers, not over 6" in compacted thickness. Take special precautions to prevent wedging action against the walls.

B. In open areas uniformly spread and deposit granular (structural) backfill in horizontal layers not exceeding 6" measured before compaction.

C. Do not backfill or fill until a minimum period of seven (7) days has elapsed since the placing and setting of supporting slabs. During the placement of fill or backfill, maintain the water level at all times at a sufficient depth below the surface to prevent saturation of the fill within two feet of the surface.

D. Perform backfilling or fill around structures such that the maximum differential in height of backfill or fill shall not exceed five feet. During the placement of backfill or fill, maintain the water level at all times at a sufficient depth below the surface to prevent saturation of the fill within two feet of the surface.

E. Begin compaction of backfill at the walls and work away from the walls. Hand guided power compaction equipment shall be used within five feet of walls.

F. In unpaved areas, backfill with Select Fill or General Backfill.

G. Any loose or disturbed material at the bottom of the foundation excavations should be removed or compacted thoroughly with hand-guided vibratory compactors prior to placement of concrete or backfill materials.

H. General fill shall be used to fill any abandoned existing structures except where granular structural fill would be required elsewhere by the plans and specifications.

I. Additional requirements for backfilling are specified under the various sections covering pipelines and roadway paving.

J. ***Backfill stainless steel BESST tanks per manufacturer requirements and precautions.***

3.10 TOP OF BACKFILL

A. Carry backfill up to pavement sub grade, or landscape sub grade. If paving is to be done at a later date, carry backfill up to temporary pavement sub grade, as determined by Owner.

B. Cover over Pipe - Immediately notify Engineer when the depth of cover over any pipe is less than 5'.

3.11 COMPACTION REQUIREMENTS

A. See Section 02250.

3.12 FIELD QUALITY CONTROL

A. Soils testing shall be performed by the approved independent testing laboratory in accordance with Section 02250 - Soil Compaction.

3.13 ADJUST AND CLEAN

A. Any trenches or excavations which have been backfilled and show any evidence of settlement or being improperly backfilled, or have been tested and failed, shall be re-excavated to the depth required for proper compaction and then properly refilled and compacted.

B. Replace or repair any pipe or structure which has been damaged or displaced.

END OF SECTION

NO TEXT
THIS PAGE WAS INTENTIONALLY LEFT BLANK

PART 1 - GENERAL

1.01 DESCRIPTION

A. This Section covers the requirements for soils compaction.

1.02 QUALITY ASSURANCE

A. The taking of samples and the performing of field compaction density tests and laboratory maximum density tests shall be done by the approved independent testing laboratory.

B. Provide at least one person who shall be present at all times during the soil compaction operations and who shall be thoroughly familiar with the various types of compaction equipment, proper compacting techniques and methods, and soils behavior, and who shall direct the compaction operations.

C. **Soil tests will be paid for out of the cash allowance.** Contractor to provide a sum of twenty thousand ($20,000.00) dollars in his cost to construct the sewage treatment plant. Unused funds to be returned to owner.

1.03 SUBMITTALS

A. See Section 01300.

B. Copies of the results of the laboratory maximum density tests, certified by the Testing Laboratory.

C. List and description of proposed compaction equipment.

1.04 JOB CONDITIONS

A. Compaction shall not take place in freezing weather or when materials to be compacted are frozen, too wet or moist, or too dry.

B. Schedule the Work to allow ample time for laboratory tests and to permit the collecting of samples and the performing of field density tests during the backfilling and compaction operations.

C. Protect pipes, structures and all other subsurface work from displacement or injury during compaction operations.

PART 2 - PRODUCTS

2.01 COMPACTION

A. Utilize the proper compaction methods and equipment to suit the soils and conditions encountered.

2.02 LABORATORY TEST REPORTS

A. As a minimum, the laboratory maximum density testing reports shall contain the following:

1. Laboratory's name.
2. Date, time and specific location from which sample was taken and name of person who collected the sample.
3. Moisture - Density Curve plotted on graph paper to as large a scale as is practical with all points used to derive the curve being clearly visible.
4. Designation of the test method used.
5. The maximum density and optimum moisture content.
6. A description of the sample.
7. The date the test was performed and the person who performed the test.
8. The Project name, identification and Contractor's name.
9. The signature of a responsible officer of the Testing Laboratory certifying to the information contained in the report.

B. As a minimum, the field compaction density testing reports shall contain the following:

1. Laboratory's name.
2. Date, time, depth and specific location at which the test was made and the person's name who performed the test.
3. Designation of the test method used.
4. Designation of the material being tested.

5. Test number.

6. In place dry density and moisture content.

7. Maximum density and optimum moisture content.

8. Percentage of maximum density achieved.

9. The Project name, identification and Contractor's name.

10. The signature of a responsible officer of the Testing Laboratory certifying to the information contained in the report.

2.03 OTHER MATERIALS

A. All other materials which are required to achieve adequate compaction shall be as selected by Contractor subject to approval of Engineer.

PART 3 - EXECUTION

3.01 MONITORING

A. All monitoring shall be subject to review by the Engineer or the Testing Laboratory at the request of the Engineer.

B. Verify that layers of material are no thicker than the maximum thicknesses specified in other Sections.

C. Verify that moisture content is nearly optimum.

D. Do not begin compaction operations until conditions are satisfactory.

3.02 PERFORMANCE

A. Compaction densities shown are percentages of the maximum density obtainable at optimum moisture content as determined by ASTM D1557, Method C.

B. Moisten or dry each layer of material to achieve optimum moisture content. Unless otherwise specified or directed by Engineer, compact each layer of material to the following required minimum densities:

Location	Density
Under concrete slabs, foundations, precast concrete structures, pipe lines and footings…..	95%

3.03 FIELD QUALITY CONTROL

A. Perform a laboratory maximum density test for each type of soil proposed for use or encountered in the Work. Determine optimum moisture content in accordance with ASTM D1557, Method C.

B. Engineer will notify Contractor of the time, date and exact location of all field compaction density tests. Frequency of field density tests shall be performed in accordance with the Engineer's requirements.

C. Field density and moisture testing shall conform to the requirements of ASTM D1556 or D2922 and ASTM D3017. Soils shall be described in accordance with ASTM D2488, Visual-Manual Procedure.

3.04 COORDINATION

A. See Section 01410 for requirements as they apply to making arrangements with the approved testing laboratory.

B. Provide all assistance and cooperation during testing and coordinate operations to allow ample time for the required sampling and testing.

3.05 ADJUST AND CLEAN

A. Replace or repair any pipe, structure or other Work which has been displaced, damaged, or injured.

B. Compacted soils not meeting compaction densities shall be re-excavated, recompacted and retested until all requirements are met.

END OF SECTION

PART 1 – GENERAL

1.01 CONTRACT DOCUMENTS

A. Work of this Section shall comply with the requirements of the Conditions of the Contract, with all Sections of DIVISION 1 – GENERAL REQUIREMENTS, with this Section, with the Plans and all other Contract Documents.

1.02 WORK INCLUDED

A. Work covered by this Section includes the requirements for furnishing and installing bituminous asphalt and concrete pavements as required for the Work.

B. Definitions:

1. Pavement Area – The full width of hard bituminous surface. It shall also include all paved gutters within the right-of-way.

2. Shoulder Area – All areas within the right-of-way and outside the pavement area.

3. Shoulder Opening – Work done completely within the shoulder area as defined above.

1.03 QUALITY ASSURANCE

A. Provide at least one person who shall be present at all times during the execution of this portion of the Work and who shall be thoroughly qualified and experienced in the placing of the type of pavements specified and who shall direct all work performed under this Section.

B. Use only personnel thoroughly trained and experienced in the skills required for installing and finishing asphalt and concrete pavements and in operating the required equipment.

C. Comply with the proper road authority standards such as New York State Department of Transportation, Westchester County Department of Public Works, etc.

D. All testing shall be performed by an approved testing laboratory. The Engineer may use the testing laboratory for inspection services.

E. Use only the materials and job-mix formula approved by the Engineer and/or proper road authority. Failure to consistently meet the approved job-mix formula shall be sufficient cause for the Engineer to prohibit the use of

asphalt supplier and rejection of all bituminous asphalt or concrete pavements installed.

F. Secure and pay for all permits.

G. Comply with the recommendations of the Asphalt Institute.

H. All finished paved surfaces shall be smooth, even and free from surface defects and irregularities. Edges shall be straight and shall meet existing pavements smoothly. Pavement shall present a smooth, continuous, and workmanlike appearance, free from patch work, rough edges, spalling areas, potholes, depressions, bumps, and other defects. The complete finished installation shall meet with the complete approval of the Engineer and the proper road authority with respect to appearance as well as structural integrity and other criteria.

1.04 SOURCE QUALITY CONTROL

A. All bituminous asphalt shall be supplied from State approved and inspected asphalt plants, approved by the Engineer.

B. All materials and the asphalt plant will be subject to inspections and tests by the proper road authority, Engineer and by the approved testing laboratory. Provide all equipment, materials, facilities, and labor as required thereof.

C. Perform one bituminous asphalt composition analysis for each grade of bituminous asphalt per 1,000 tons of asphalt supplied and installed. A minimum of three analyses shall be performed.

D. Perform sieve analysis of each type of gravel, broken stone, backfill material when requested, and other materials used.

1.05 JOB-MIX FORMULA

A. No paving shall commence until a job-mix formula has been submitted to and approved by the Engineer. The required job-mix formula shall be prepared by the approved testing laboratory and shall comply with New York State Department of Transportation or the proper road authority specifications. Provide all testing as required to clearly show that materials met specification requirements.

1.06 SUBMITTALS

A. Proposed job-mix formula and certified materials tests as required under Paragraph 1.04.

B. Name, address and telephone number of the asphalt plant proposed for use and a certification that the plant conforms to the requirements of these specifications.

C. Name and description of pavers, rollers and other equipment proposed for use.

D. Certified test reports on the tests required under Part 2 of this Section.

E. Methods and procedures for correcting defective, damaged or deficient work.

1.07 DELIVERY, STORAGE AND HANDLING

A. Hauling equipment shall conform to NYSS. The Contractor is advised that length of haul, manner of haul, temperature of asphalt, and similar criteria shall be properly controlled such that the job-mix of asphalt, when placed, is identical to that specified, approved, and as it left the asphalt plant. Segregation of aggregates, whether occasioned by hauling operations, improper mixing at the asphalt plant, or for other reasons, will result in rejection of the pavement. Clusters and pockets of aggregate in the finished pavement surface, with voids surrounding the aggregates, are unacceptable and will be rejected.

B. Store materials in a manner to assure good drainage, to preclude the inclusion of foreign matter and to preserve the gradation. Separate materials with bulkheads or other approved means.

2.01 TRENCH BACKFILL MATERIAL

A. In Pavement Area – Backfill material for the pavement area shall have prior approval of the Engineer. Acceptable backfill material shall be sound, hard, durable, stone, run of bank gravel, sand or other acceptable granular material, the particles of which shall be of such a size that, of that portion passing the 4" square sieve, not more than 70 percent by weight shall pass the number 40 mesh-sieve, and not more than 10 percent, by weight, shall pass the number 200 mesh-sieve, as determined by washing through the sieve in accordance with ASTM D422.

2.02 BITUMINOUS ASPHALT PAVEMENT

A. Bituminous asphalt pavements shall be constructed with approved materials as stipulated in NYSS, Section 400. Job-mix formulas shall be formulated and submitted by the State approved batching plant, through the paving contractor.

B. Course Thicknesses:

1. Base Course: In accordance with the proper road authority requirements as presented on the paving schedule included on the plans.

2. Binder Course (if required): In accordance with the proper road authority requirements as presented on the paving schedule included on the plans.

3. Top Course: In accordance with the proper road authority requirements as presented on the paving schedule included on the plans.

C. Fine aggregates and coarse aggregates (retained on a 1/8” screen) shall conform in all respects to the requirements of NYSS, Section 703-01 and 703-02 respectively. Additional NYSS requirements may apply for high-friction pavements (Types 6F, 7F, 8F and 9F).

D. Bituminous asphalt materials shall comply with NYSS, Section 702.

2.03 MIXES

A. All bituminous asphalt shall be mixed at the approved asphalt mixing plant in accordance with NYSS.

PART 3 – EXECUTION

3.01 INSPECTION

A. Prior to the work of this Section, carefully inspect the installed work of all other trades and verify that all such work is complete, tested and approved by the Engineer and to the point where this installation may be properly performed. Particular attention shall be given to items such as pipelines so as to avoid excavating pavements at a later date.

3.02 BACKFILLING TRENCHES

A. Shoulder Trenches:

1. Shoulder trenches outside of pavement area shall be backfilled and compacted within 6" of the surface. The final 6" shall consist of shoulder stone, or other approved material, thoroughly rolled and compacted to the original grade of the shoulder and conforming to grade and crown of road pavement.

2. Should settlement or washouts occur, or the shoulder area otherwise become not ride able due to trench excavation or restoration, the trench shall be brought up to grade by the addition of additional shoulder stone which shall be rerolled and compacted.

3. Where steep grades or serious water conditions are encountered, the Engineer, at his discretion, may require that shoulder openings be wholly or partly backfilled with 1-1/2" crushed stone chinked with finer material and/or that the opening be topped with 2" bituminous Concrete Binder Course.

B. Pavement Area Trenches:

1. When excavation falls within the pavement area, the pavement shall be scored to prevent excessive breaking of the pavement. In the case of longitudinal trenches and small openings along the edge of the existing pavement, the scoring line shall be a minimum of 18" from the edge of the existing pavement wearing course.

C. All Trenches:

1. Backfilling for both shoulder and pavement areas shall be done in accordance with Section 02200, except as modified herein. Backfill shall be deposited in layers not to exceed 6" in depth before compaction. Equipment to be used for compaction may include vibrating tampers of the mechanical or pneumatic type, impact type rammers, trench rollers, or any other type of equipment which will produce the required degree of compaction subject, however, to the requirements of Section 02200 and the section(s) in which the pipe is specified. Compaction shall be 95% of maximum Modified Proctor Density.

2. The Engineer may require a field demonstration of compaction equipment before approving it for use. Rolling and compaction shall be done in the longitudinal direction of the trench. If the moisture content of the soil is outside of the limits required to achieve 95% of maximum density, the Engineer will require that addition of water or the use of drier soil so that the required degree of compaction will be achieved.

3. The backfill material, previously compacted, shall be cut out to a depth sufficient to allow for the installation of the entire pavement, from surface to the prepared sub-grade. This includes the sub-base course, the base course, and the binder course of bituminous concrete material. All places where the edge of the pavement has been broken outside the neat scoring lines shall be rescored and the road metal removed. Working lengths for this operation shall be

selected so that the binder course pavement shall be re-laid within three days after the opening is made.

3.03 SUBGRADE PREPARATION

A. Prepare the sub grade as specified above and obtain Engineer's approval prior to proceeding beyond this point. Sub grade shall be to the proper lines, grades, and cross section to allow for the installation of the required thicknesses of the various pavement materials to be installed and which will result in the finished surface at proper lines, grades and cross section. The line and grade of the sub base shall be as shown on the Contract Drawings.

3.04 BASE AND/OR BINDER COURSE INSTALLATION

A. The finish top of the base or binder course shall be flush with the grade of the existing pavement. In the case of longitudinal trenches along the edge of the existing pavement, the base or binder course shall be laid to a width 6" beyond the existing edge of pavement and in no case shall be less than 2 feet wide. In such event the final wearing surface shall be laid to an outside line to match the existing gutter or edge of pavement.

B. The finish surface pavement shall not be placed until after a suitable waiting period has elapsed, to allow traffic to further compact and prove the suitability of the binder course. A minimum of 45 calendar days shall be allowed for this waiting period.

C. During the waiting period while base or binder course is in place, the Contractor shall be responsible for maintaining this base or binder course in a safe, ride able condition. Should any settlement or other defect develop, the Contractor shall immediately protect the area with lights, barricades, signs or other safety devices as may be needed, and keep it protected until repairs have been made. Should a settlement of less than 4" occur, it shall be repaired within 24 hours by patching with additional base or binder course materials. If excessive (over 4") settlements occur, indicating a pavement in this area shall be removed, the foundation soil shall be recompacted or removed and replaced if necessary, and the base or binder course shall be replaced.

3.05 SURFACE COURSE INSTALLATION

A. After final settlement has occurred, the Contractor shall place a finished pavement course which shall overlap each edge of the trench base or binder course pavement by 12". The Contractor shall remove both the base/binder course and existing pavements to a minimum depth as shown on the plans using a suitable size milling machine. Prior to placing the finish pavement course, a tack coat shall be applied to the edges of all pavement area to be overlaid, at a rate of 0.05 gallons per square yard.

B. Roll the surface course with a ten-ton static or equivalent vibratory roller, as specified by the proper road authority.

3.06 MANHOLE CASTING AND OTHER APPURTENANCES

A. Manhole frames shall be set so that the surface plane of the top of the frame meets the finish surface of the finish pavement course. Frames and covers of existing manholes that are in the area of pavement replacement shall be adjusted as described above for new manhole frames. In no case shall manhole frames and covers protrude above the finish pavement surface. Likewise, frames and covers shall not site in depressions, nor be paved over. In order to accomplish the above intent, and during the period after manhole installations and prior to finish pavement installations, temporary pavement shall be feathered from the surface plane of the manhole casting to the surface plane of the temporary pavement for a circumferential distance as determined by the Engineer. Riser rings may not be used to adjust manhole castings.

3.07 FIELD QUALITY CONTROL

A. Meet the requirements of Section 02210, 02221, Division 3, and the other appropriate sections.

B. Except where otherwise specified, the Engineer will select the date, time, location, number and type of tests required. The Contractor shall coordinate all testing with the approved testing laboratory and shall provide his fullest cooperation and assistance. All sampling and testing shall be done in the presence of the Engineer.

C. Run gradations of gravel base and gravel shoulders and for all other materials which may be proposed.

Additional gradations shall be provided when a previous gradation does not meet specification requirements and when a new source of material is proposed.

D. Thickness tests may be conducted on the sub-base, base, binder, and surface courses. The Contractor shall retain the services of a qualified laboratory to core bore pavements at locations and intervals to be selected by the Engineer. These tests may be conducted on an average of one test every 200'. Core samples shall be taken by the testing laboratory in accordance with AASHTO T168. If deficiencies in thickness are found, the Contractor shall submit his proposal for correcting the deficiencies to the Engineer for approval, and appropriate credits or adjustments in prices made by the Contractor.

E. The taking of an average of one sample for every 300 tons of asphaltic concrete, or a minimum of three (3) for each day's placement, may be ordered by the Engineer. Samples shall be taken in accordance with AASHTO T168, cored. These samples will be used to check thicknesses and when ordered by the Engineer, they shall be used for running extraction, specific gravity, and gradation tests.

F. Provide, for the Engineer's use, a sturdy shank dial thermometer, an armored thermometer, straight edge, 4' level and a thickness measuring device. Minimum lay down temperatures shall be as per the proper road authority's requirement.

3.08 ADJUST AND CLEAN

A. When specified conditions and tolerances are not met, do all work required to correct the deficiencies in a manner approved by the Engineer.

B. If any irregularities or defects remain after compaction is completed, the entire affected area of the surface course shall be promptly removed and sufficient new material placed to form a true and even surface. Roll all minor surface projects, joints, and minor honeycombed areas to a smooth finish. The final surface shall be of uniform texture conforming to the line, grade and cross section shown on the Drawings, existing, or as directed by the Engineer.

C. If settlement occurs, do all work required to eliminate the settlement in a manner approved by the Engineer.

D. Replace all asphaltic concrete where cores and samples were taken and blend in with surrounding pavement.

E. Clean all paved surfaces of dirt, stones and other debris and remove and dispose of all-site all discarded mix, trans and other debris.

F. All centerline, edge of pavement, cross walk parking, stop bars, directional arrow, stop markings, etc., pavement markers shall be repainted by the contractor as directed by the Engineer or proper road authority. The cost of replacing and repainting line stripping and/or road reflector (if present) shall be included in the contract price and cost of pavement restoration.

END OF SECTION

PART 1 - GENERAL

1.01 DESCRIPTION

A. This Section includes the material and bedding requirements for all pipe and pipe fittings for underground pressure and non-pressure piping.

B. Related work specified elsewhere includes:

Pipe and Manhole Leakage Testing	01666
Excavating, Trenching & Backfilling	02221
Underground Non-Pressure Piping	02705
Underground Pressure Piping	02706
Pipe & Pipe Fittings (Exposed)	15060
Valves	15100

C. Abbreviations:

CUP	-	Copper Pipe
CLDI/DIP	-	Cement Lined Ductile Iron Pipe
PVC	-	Polyvinyl Chloride
STP	-	Steel Pipe
SS	-	Stainless Steel

1.02 QUALITY ASSURANCE

A. Pipe and pipe fittings shall be produced in a plant of recognized reputation that is regularly engaged in the production of pipe conforming to the specified standards. Pipe and pipe fittings of the same type shall be the product of a single manufacturer, unless otherwise approved by the Engineer.

B. All pipe shall be manufactured in a plant of a member of the following organizations:

Pipe	Organization
DIP	Ductile Iron Pipe Research Association
PVC	Plastics Pipe Institute
STP	Steel Pipe Fabrications Association
CUP	Copper Development Association
SS	Tube & Pipe Association
FMA	Fabricator and Manufacturer's Association International

1.03 SOURCE QUALITY CONTROL

A. General - The manufacturers shall test and furnish certificates covering all pipe and fittings supplied under this Section. Select test samples from the run of pipe proposed to be furnished to the Project. Unless Engineer elects to witness such testing, the manufacturer shall select the samples for

testing. Advise Engineer at least two (2) week in advance of the time and location of the testing.

B. DIP

1. Perform one mill analysis and load test from each 2,500 linear feet or fractional part thereof for each size pipe. Report on dimensions and weight of pipe and hydrostatic test on each straight pipe.

C. PVC

1. Sewer Piping (Non-Pressure) - Perform the following tests:

a) Pipe shall be subjected to the Drop Impact Test in accordance with ASTM D2444.

No shattering or splitting shall be evident when the following energy is impacted:

Pipe Size, Inches	Energy, Ft.-Lbs.
4	150
6	210
8	210
10	220
12	220
15	220

b) Joints - ASTM D3212.

c) Pipe Stiffness - ASTM D2412.

d) The pipe shall be tested for flattening, and shall show no evidence of splitting, cracking, or breaking when a six inch (6") long specimen is compressed between parallel plates to a deflection of forty percent (40%) of the outside diameter of the pipe, said compression being applied and completed within two to five minutes.

2. Process Piping (Pressure)

a) The pipe shall pass the flattening test per AWWA C900a-92.

b) Minimum quick burst strength shall be as follows, when tested in accordance with ASTM D1599:

Pressure Class	Min. Burst Pressure, psi
150	755

D. CUP

1. Perform one mill analysis per type or grade of material used.

2. Report on dimensions and weight of pipe.

E. Additional Testing - In addition to the tests required above, Owner may perform additional testing on pipe delivered to the Project site.

1.04 OTHER TESTS

A. Various test and checks shall be performed, as specified in Section 01666, to determine compliance with the Specifications and Drawings. The Contractor is advised that failure of a test is suitable grounds for the Engineer to order that portion of the Work removed and reconstructed, if necessary, to meet the requirements of the Contract Documents.

1.05 SUBMITTALS

A. See Section 01300.

B. Shop Drawings, catalog cuts, and manufacturer's literature for all pipe and pipe fittings, to include coatings and linings, material specifications, dimensions, tolerances, and all related data.

C. Test certificates for the manufacturers' tests required under Paragraph 1.03.

D. Pipe manufacturers' Certificates of Compliance on pipe, with each lot of pipe supplied. Immediately turn certificates over to Engineer. Materials delivered to the site without accompanying certificates will be subject to rejection.

1.06 DELIVERY, STORAGE AND HANDLING

A. Each length of pipe delivered to the site shall be clearly marked with the name of the manufacturer, class of pipe and pipe diameter. Store in accordance with manufacturer's approved instructions.

B. Carefully handle all pipes and fittings when loading and unloading. Lift pipes and fittings by hoists or lower on skid-ways in a manner to avoid shock. Lower pipe into trench with derricks, rope or other suitable equipment.

C. Do not dump or drop pipe and fittings. Those that are dumped or dropped are subject to rejection by Engineer.

D. **Store PVC pipe under canvas or other opaque material which will allow air circulation but will eliminate the direct rays from the sun.**

E. Comply with all other recommendations of the manufacturers.

PART 2 - PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS

A. Manufacturers of pipe, fittings, and appurtenances shall be members of the appropriate technical organization to which their product(s) applies.

Acceptable manufacturers are listed below, however, this does not preclude the use of an unnamed manufacturer's products, when submitted to and approved by the Engineer.

MATERIAL	ACCEPTABLE MANUFACTURER(S)
CLDI/DIP	American Ductile Iron; U.S. Pipe & Foundry Co.; Clow Corp; Griffin Pipe
PVC	Johns-Manville; Clow
CUP	Revere Copper & Brass Co.
STP	U.S. Steel, Armco, Inc. Bethlehem Steel Corp.; or equal
S.S.	Rath Manufacturing Co., Janesville WI or equal

2.02 MATERIALS - GENERAL

A. All pipe delivered to the jobsite shall be clearly marked at the factory with the class of pipe, the manufacturer's identification, and all else as required by the codes, standards, and specifications referred to under this Section. Omission of this information will be cause for rejection of pipe.

B. Caps and Plugs - Watertight, of similar manufacture and producing the same joint conditions as the pipe on which the cap or plug is placed.

C. Pipe Adaptors - Joint pipes of different materials with adaptors specifically manufactured for that purpose and as approved by the Engineer. Where dissimilar materials join, such that galvanic action may produce corrosion, provide dielectric couplings to preclude damage to the materials.

D. Force mains, water lines, and other pressurized lines, shall be laid with pressure pipe of the size, type, class, and strength as shown on the Drawings or specified in the Schedule. Fittings shall be mechanical restrained joint, as required and specified hereinafter. Fittings shall be made suitable to withstand the test pressures and loadings as specified in Section 01666.

E. Connections to Water Lines - Use fittings and adaptors as shown on the Drawings.

F. For replacement of existing pipelines, use materials and bedding to match the existing conditions, unless otherwise specified.

2.03 COPPER PIPE

A. Tubing

1. Underground installations - Soft annealed, Type K. Furnish in straight lengths or coils as required.

B. Pipe Bedding - Compacted sand and gravel.

2.04 DUCTILE IRON PIPE (UNDERGROUND)

A. Pipe - As specified in Section 15060.

B. Fittings - All underground cement lined ductile iron fittings shall be mechanical joint in accordance with ANSI/AWWA C110/A21.10 with the joint meeting the requirements of ANSI/AWWA C111/A21.11. The fitting joints shall be restrained using Megalug series 1100 joint restraints as manufactured by Ebaa Iron Sales, Inc. or equal. All fittings shall be cement lined with bituminous seal coat per AWWA C104.

C. Pipe Joints -

1. Mechanical - AWWA C111

2. Push-on - AWWA C111, "Fastite" as manufactured by American-Ductile Iron, "Tyton" as manufactured by U.S. Pipe & Foundry Co., "Ball-Tite" as manufactured by Clow, or equal.

3. Mechanical, Restrained - AWWA C111, except, provide mechanical joint retainer glands with set screws in lieu of follower gland.

D. Class - Class 53

E. Lining - Comply with the requirements of Section 15060. All ductile iron pipe shall be lined.

F. Coatings - Comply with the requirements of Section 15060. All ductile iron pipe shall be coated.

G. Pipe Bedding

1. In paved areas, use type 5 bedding per American Ductile Iron Pipe Division of American Cast Iron Pipe Company.

   Utilize gravel or crushed stone up to pipe centerline, with maximum particle size of 3/4". Utilize general fill from centerline up, with maximum particle size of 3/4" around pipe and to 1' above pipe. Fill remainder of trench in accordance with Section 02221. Compact entire trench in accordance with Section 02250.

2. In unpaved areas, use type 5 bedding as above, or use type 4 bedding with maximum particle size as above and with general fill from top of sand, gravel or crushed stone. Fill and compact remainder of trench in accordance with Sections 02221 and 02250.

2.05 POLYVINYL CHLORIDE PIPE

A. Sewer Piping (Non-Pressure)

1. Acceptable Products - "Ring-Tite Gravity Sewer Pipe" as manufactured by Johns-Manville, equivalent by Clow, Certain-Teed, Robintech, Carlon, or equal.

2. Materials - ASTM 3034; SDR 35 (or less); Stiffness: 46 psi minimum, at 5% deflection per ASTM D2412 or as shown on Drawings.

3. Standard Laying Length - Twenty feet (20'). Laying lengths of twelve and one-half feet (12'-6"') and random lengths of lesser or intermediate length may be utilized, subject to the conditions outlined in other sections.

4. Joints - Of the integral wall bell and spigot type with a solid cross section rubber ring, factory assembled, and securely locked in place to prevent displacement during assembly. Each spigot end shall be clearly marked, for the entire circumference, indicating the proper distance of insertion into the adjoining bell end, such marking being placed so as to adequately allow for expansion and contraction of the pipeline over the full range of temperature fluctuations which may occur in the final installation.

The rubber sealing ring gasket shall permit the pipe to expand, contract, and deflect, maintaining an adequate compressive force against the sealing surfaces so as to affect a continuous and positive seal under all conditions of the joint tolerances, and shall meet the requirements of ASTM F477. The sealing ring shall be the only element depended on to make the joint flexible and watertight.

5. Joint Lubricant - As recommended by the manufacturer.

6. Fittings - Of identical manufacture as the pipe with respect to strength, material, physical properties, joints, and all other pertinent criteria.

B. Process Piping (Pressure)

1. Acceptable Products - "Blue Brute Ring Tite" as manufactured by Johns-Manville, equivalent by Clow, or equal.

2. Materials - AWWA C900; Pressure Class: 150.

3. Standard Laying Length - Twenty feet (20').

4. Joint - Of the integral wall bell and spigot type with a solid cross section rubber or synthetic rubber sealing ring meeting the requirements of ASTM D1869 and ASTM F477. Sealing rings shall be of such design and construction as to properly and adequately withstand constant exposure to raw sewage, sewage gases, and related deleterious substances which are normally encountered in municipal sewers and force mains. Sealing rings shall further be marked, with a positive means of quickly identifying the proper intended use therefore, and the correct direction of insertion in the bell end of the pressure pipe. Each spigot end shall be clearly marked, for the entire circumference, indicating the proper distance of insertion into the adjoining bell end, such marking being placed so as to adequately allow for expansion and contraction of the pipeline over the full range of temperature fluctuations which may occur in the final installation.

   The sealing ring shall be the only element depended on to make the joint flexible and watertight. Thrust restraint shall be by restrained joints.

5. Joint Lubricant - As recommended by the manufacturer.

6. Fittings - Fittings for PVC pressure pipe shall be of cement lined seal coated ductile iron. Fittings shall be of the mechanical

restrained joint type and shall utilize the proper rubber sealing ring gasket for mechanical joints. In all other respects, fittings shall meet the requirements previously specified except that the joint restraints shall be Megalug Series 1100 PV or equal.

C. Embedment Materials for PVC Pipe

1. Embedment materials include a number of processed materials plus the soil types defined according to the United Soil Classification System (USCS) in ASTM D2487.

2.06 STEEL PIPE

A. Comply with the specifications contained in Section 15060.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Pipe installations are specified in other Division 2 Sections under which the pipes are furnished and installed.

3.02 FIELD QUALITY CONTROL

A. In the presence of Engineer, inspect each length of pipe delivered to the job for flaws, cracks, dimensional tolerances and compliance with the applicable specifications.

B. Provide Engineer with suitable templates, calipers, feeler gauges and other equipment for checking pipes and fittings. Only pipes and fittings accepted by Engineer, and so marked, shall be installed in the Work.

END OF SECTION

PART 1 - GENERAL

1.01 DESCRIPTION

A. Work covered by this Section includes the furnishing and installation of underground non-pressure piping, where shown on the Drawings.

B. Related work specified elsewhere includes:

Leakage Testing	01666
Excavating, Trenching & Backfilling	02221
Soil Compaction	02250
Pipe and Pipe Fittings	02610
Underground Pressure Piping	02706

1.02 QUALITY ASSURANCE

A. Provide at least one person who shall be present at all times during the execution of this portion of the work and who shall be thoroughly familiar with the types of materials being installed, pipe loadings and the material manufacturers' recommended methods of installation and who shall direct all work performed under this Section.

B. Pipe installation shall be done by skilled workers and each pipe laying crew shall have a pipe laying foreman.

C. Accurately install pipe to the lines and grades shown on the Drawings, or as directed by Engineer, so that inverts are smooth and do not permit any water to be trapped or pond between structures or within manholes.

D. A full circle shall be visible at the far end, when looking through pipes running from structure to structure.

E. Deflections at joints are not permitted without the written consent of Engineer and then shall be no more than one-half the manufacturer's recommended allowable deflection.

F. Notify Engineer in advance whenever an existing pipeline conflicts with the proposed locations of the Work.

1.03 SUBMITTALS

A. See Section 01300.

B. Details of proposed methods and procedures for connecting to existing structures or pipes.

1.04 HANDLING

A. Carefully handle all pipes and fittings when loading and unloading. Lift by hoists or lower on skidways in a manner to avoid shock and damage to the pipe.

B. Use backhoes, ropes or other suitable equipment for lowering pipe into trenches where required due to weight of material and for the safety and protection of workmen, materials, equipment, property and the Work. Take particular care to avoid damaging the pipe, its coating or its lining.

1.05 JOB CONDITIONS

A. In the event that a water main or water service must be shut off because of an accidental interruption, immediately notify Engineer and the Water Utility or private owner, as applicable, to make arrangements to restore service and to provide temporary service, if required.

B. The Drawings indicate the required pipe sizes and locations of all piping, manholes, structures and appurtenances. Verify all locations and immediately notify Engineer of any discrepancies or conflicts.

C. Approval of Engineer is required prior to changing the location of any of the Work due to field conditions. Changes in pipe sizes are prohibited without a written consent from Engineer.

D. All installed piping shall form completely connected systems including connections to valves, equipment, structures, existing facilities and appurtenances specified in other Sections to result in a satisfactorily operating installation.

PART 2 - PRODUCTS

2.01 PIPE, PIPE FITTINGS

A. Materials are specified in Section 02610.

PART 3 - EXECUTION

3.01 INSPECTION

A. Verify that trench conditions and pipe bedding are properly provided in accordance with Sections 02221 and 02610.

B. Verify that pipe and fittings are in full compliance with these Specifications.

C. Reinspect each length of pipe, fittings, and joints and remove from the Project site any damaged or defective materials.

D. Do not install pipe until conditions are satisfactory.

E. Inspect each stretch of completed pipeline prior to backfilling, to ensure compliance with the Contract Documents. Do not continue with backfilling operations prior to inspection by the Engineer.

3.02 PREPARATION

A. Thoroughly clean pipe and fitting interiors, joint surfaces and gaskets prior to installation. Maintain pipes and fittings clean.

3.03 PIPE INSTALLATION - GENERAL

A. Carefully lower pipes and fittings into the trench. Apply joint lubricant in accordance with the manufacturer's recommendations. Join pipe sections and fittings.

B. Select pipe and fittings so that there will be as small a deviation as possible at the joints and so that inverts present a smooth surface. Pipe and fittings which do not fit together to form a tight-fitting joint are not permitted.

C. Use only mechanical cutters for cutting pipe.

D. Install pipes to the required lines and grades as given by the Engineer using an approved method of control. Engineer reserves the right to disapprove a method of control, including those previously approved, if, in Engineer's opinion, the method of control is not providing the accuracy required under the Contract. Pipes which are installed underground water level (which is temporarily depressed by dewatering for construction purposes) shall be ballasted for stability, by use of continuous concrete collars.

E. Maintain cleanliness of installed pipe and fitting interiors throughout the Work. Plug ends when pipe installation is not in progress so that dirt, foreign matter, water, animals and people do not enter the pipe. Drainage of construction excavations through sanitary sewers is not permitted.

F. Maintain the excavation free of water during the progress of the Work. No pipes shall be laid in water nor shall there by any joints made up in water. No separate allowance for pumping or otherwise removing water will be made. All slides or cave-ins of the trenches or cuts shall be remedied at the expense of the Contractor, and to the satisfaction of the Engineer.

G. Make connections between pipes of different materials with approved adaptors. The encasement of adaptor made connections with concrete is not permitted.

H. Commence pipe laying at the lowest point, with the spigot ends pointing in the direction of flow.

I. All adjustments to the line and grade of pipe laid on earth foundation shall be done by scraping away or filling in the earth under the barrel of the pipe, and not by blocking or wedging. Where excavation has been carried too deep but not in excess of six (6) inches, the Contractor may replace with suitable material and compact same to provide a firm foundation.

J. Wherever the excavation has been carried to a depth in excess of six (6) inches, due to the Contractor's negligence, the Engineer may order broken stone or gravel refill without additional compensation to the Contractor. In all cases the trench under the joint shall be excavated to permit an even bearing for the barrel of the pipe.

K. When unsuitable materials and/or conditions are encountered, the Engineer may direct the excavation to continue below grade and the trench filled with gravel or crushed stone foundation, or the Engineer may order other corrective measures.

L. Where required, holes and spaces to be used for joints shall be sufficiently large to leave the joint of each pipe free and not resting on the ground at any point. Every joint shall be made up in the trench.

3.04 DUCTILE IRON PIPE INSTALLATIONS

A. In addition to the requirements of AWWA C600 and this Section, note the following if mechanical joint pipe is used.

B. In laying mechanical joint pipe, take care that the spigot is centrally located in the bell. All surfaces with which the rubber gasket comes in contact shall be brushed thoroughly with a wire brush just prior to assembly, to remove all loose rust or foreign material which may be present. The same surfaces and rubber gasket shall be brushed with lubricant just prior to slipping the gasket over the spigot end and into the bell. When tightening bolts on mechanical joint pipe, it is essential that the gland be brought up toward the pipe flange evenly, maintaining approximately the same distance between the gland and the face of the flange at all points around the

socket. This may be done by partially tightening the bottom bolt first, then the top bolt, next the bolts at either side, and last, the remaining bolts. Repeat this process until the proper joint tightness is attained. Overstressing of bolts to compensate for poor installation will not be permitted.

3.05 FIELD QUALITY CONTROL

A. Provide Engineer with bench mark data, level, and all other materials, equipment and labor which he may request for the purposes of checking the installed work.

B. Afford Engineer access to the Work so that he may spot check the installations or check each length of pipe immediately after it has been installed or check it at any time after installation.

C. Inspect pipe joints and verify that they have been properly installed and made up and free from sags and deflections.

D. Perform leakage tests in accordance with Section 01666 and make any repairs and replacements necessary to meet the stipulated limits.

E. Check piping to determine if any displacement of the pipe has occurred, after trench has been backfilled to full depth, by flashing a light between structures. If the illuminated interior of the pipe line shows poor alignment, displaced pipe, or any other defects, remove and reinstall piping until all requirements are met.

3.06 ADJUST AND CLEAN

A. Correct any section of piping that is found defective in material, alignment, grade, joints or damaged.

B. In the event that dirt, debris or any other foreign material has entered any portion of the piping, flush the piping with clean water. Continue the flushing process until the piping is clean, as determined by Engineer.

THIS PAGE WAS INTENTIONALLY LEFT BLANK

PART 1 - GENERAL

1.01 DESCRIPTION

A. Work covered by this Section includes the furnishing and installation of underground pressure piping for all water supply and sewage force mains.

1.02 QUALITY ASSURANCE

A. Provide at least one person who shall be present at all times during the execution of this portion of the Work and who shall be thoroughly familiar with the types of materials being installed, pipe loadings and the material manufacturers' recommended methods of installation and who shall direct all work performed under this Section.

B. Pipe installation shall be done by skilled workers and each pipe laying crew shall have a pipe laying foreman.

C. Accurately install pipe to the lines, grades and depths designated on the Drawings.

D. Deflections at joints, if approved by Engineer, shall be no more than 50 percent of the manufacturer's recommendation.

1.03 SUBMITTALS

A. See Section 01300.

B. Details of proposed methods and procedures for connecting to existing structures or pipes.

1.04 HANDLING

A. See Section 02705.

PART 2 - PRODUCTS

2.01 PIPE, PIPE FITTINGS AND PIPE BEDDING

A. Materials are specified in Sections 02221 and 02610.

2.02 VALVES, VALVE BOXES AND HYDRANTS

A. As specified on the Drawings or Section 15100.

2.03 CONNECTIONS TO EXISTING PIPELINES

A. Use fittings and adaptors as shown on the Drawings or as required to make the connection.

B. Provide all labor, material and equipment for making connections to existing pipelines.

2.04 PIPE ADAPTORS

A. Join pipes of different pipe classes and sizes with adaptors specially manufactured for that purpose and acceptable to Engineer.

PART 3 - EXECUTION

3.01 INSPECTION

A. Verify that points of connections to existing pipes have been excavated, elevations taken and given to Engineer, and Engineer has issued an authorization to proceed with the work as shown, or with modifications.

B. Verify that trench conditions and pipe bedding are properly provided in accordance with Sections 02221 and 02610.

C. All pipe and fittings shall be in full compliance with these Specifications.

D. Re-inspect each length of pipe, fittings and joints and remove from the Project site any damaged or defective materials.

E. Do not install pipe until conditions are satisfactory.

F. Inspect each stretch of completed pipeline prior to backfilling, to ensure compliance with the Contract Documents.

3.02 PREPARATION

A. Thoroughly clean interiors of pipes, fittings and appurtenances, joint surfaces, and gaskets prior to installation.

3.03 PERFORMANCE

A. Force mains shall be laid with a constant uphill slope, having no intermediate high points unless specifically ordered in writing by the Engineer, and unless an air release chamber is specified and provided.

3.04 PIPE INSTALLATION - GENERAL

A. Carefully lower pipes and fittings into the trench. Apply joint lubricant in accordance with the approved manufacturer's recommendations. Join pipe sections and fittings.

B. Select pipe and fittings so that there will be as small a deviation as possible at the joints and so that inverts present a smooth surface. Pipe and fittings which do not fit together to form a tight-fitting joint are not permitted.

C. Use only mechanical cutters for cutting pipe.

D. Install pipes to the required lines and grades using an approved method of control. Engineer reserves the right to disapprove a method of control, including those previously approved, if, in Engineer's opinion, the method of control is not providing the accuracy required under the Contract. Pipes which are installed underground water level which (is temporarily depressed by dewatering for construction purposes) shall be blasted for stability by use of continuous concrete collars.

E. Maintain cleanliness of installed pipe and fitting interiors throughout the Work.Plug ends when pipe installation is not in progress so that dirt, foreign matter, water, animals and people do not enter the pipe. Drainage of construction excavations through installed pipes is not permitted.

F. Maintain the excavation free of water during the progress of the Work. No pipes shall be laid in water nor shall there be any joints made up in water. No separate allowance for pumping or otherwise removing water will be made. All slides or cave-ins of the trenches or cuts shall be remedied at the expense of the Contractor, and to the satisfaction of the Engineer.

G. Make connections between pipes of different materials with approved adaptors. The encasement of adaptor made connections with concrete is not permitted.

H. Install pipe with plain ends pointing in the direction of the flow.

3.05 INSTALLATIONS

A. Ductile Iron Pipe - In laying mechanical and push-on joint pipe, take care that the spigot is centrally located in the bell. All surfaces with which the rubber gasket comes in contact shall be brushed thoroughly with a wire brush just prior to assembly, to remove all loose rust or foreign material which may be present. The same surfaces and rubber gasket shall be brushed with lubricant just prior to slipping the gasket over the spigot end and into the bell. When tightening bolts on mechanical joint pipe, it is essential that the gland be brought up toward the pipe flange evenly, maintaining approximately the same distance between the gland and the

face of the flange at all points around the socket. This may be done by partially tightening the bottom bolt first, then the top bolt, next the bolts at either side, and last, the remaining bolts. Repeat this process until the proper joint tightness is attained. Overstressing of bolts to compensate for poor installation shall not be permitted.

B. Pressure PVC (DR18) - Follow manufacturer's written procedure for pipe installation.

3.06 ANCHORING PRESSURE PIPES

A. Anchor all connections to piping such as tees, bends, reducers, dead end caps, and hydrants. Anchor by means of any of the following:

MECHANICAL JOINT RETAINER GLANDS AT ALL FITTING AND TIE RODS ON ONE PIPE JOINT ON EACH SIDE OF FITTINGS. INSTALL CONCRETE THRUST BLOCKS AT ALL FITTINGS.

B. Metal harness and tie rods at fittings and one pipe joint on each side of fitting. Complete harness assembly shall be given two (2) brush coats of approved asphaltum paint after assembly and tightening following proper surface preparation.

3.07 CONNECTIONS TO EXISTING PIPES

A. Where noted on the Drawings or as directed by the Engineer, the Contractor shall make connections to existing pipe.

B. Provide necessary adaptors, spool pieces and specials required to make the connections.

C. It shall be the Contractor's responsibility to shut off and drain existing pipelines as needed and to the satisfaction of the Engineer, in order to effect connections.

3.08 FIELD QUALITY CONTROL

A. Provide Engineer with bench mark data, level, and all other materials, equipment and labor which he may request for the purposes of checking the installed work.

B. Afford Engineer access to the Work so that he may spot check the installations, or check each length of pipe immediately after it has been installed, or check it at any time after installation.

C. Inspect pipe joints and verify that they have been properly installed and made up, and free from sags, high spots, and excessive deflections.

D. Perform leakage tests in accordance with Section 01666 and make any repairs and replacements necessary to meet the stipulated limits.

3.09 ADJUST AND CLEAN

A. Any section of piping that is found defective in material, alignment, grade, joint or otherwise, shall be corrected.

B. In the event that dirt, debris or any other foreign material has entered any portion of the piping, flush the piping with clean water. Continue the flushing process until the piping is clean, as determined by Engineer.

END OF SECTION

NO TEXT
THIS PAGE WAS INTENTIONALLY LEFT BLANK

PART 1 - GENERAL

1.01. SUMMARY

This Section specifies requirements for furnishing and installing concrete reinforcement.

1.02. REFERENCES

The following is a listing of the publications referenced in this Section:

ACI 315 Details and Detailing of Concrete Reinforcement

ACI 318 Building Code Requirements for Reinforced Concrete

ASTM A 82 Steel Wire, Plain, for Concrete Reinforcement

ASTM A 184 Fabricated Deformed Steel Bar Mats for Concrete Reinforcement

ASTM A 185 Steel Welded Wire, Fabric, Plain, for Concrete Reinforcement

ASTM A 615 Deformed and Plain Billet-Steel Bars for Concrete Reinforcement

Concrete Reinforcing Steel Institute (CRSI) - Manual of Standard Practice Placing Reinforcing Bars

1.03. DELIVERY, STORAGE, AND HANDLING

A. Deliver concrete reinforcement in bundles marked with metal tags indicating size, length, and mark number.

B. Store and handle materials to prevent corrosion, damage to coating or contamination that could impair bond.

1.04. SUBMITTALS

The following items shall be submitted to the Engineer, except as otherwise noted.

A. Shop Drawings

1. As per Division 1, "Shop Drawings, Catalog Cuts and Samples".
2. Details indicating placement, cover, splice locations, lap lengths, grade, bar size, length, mark number, bending schedule, bending diagram, type of coating, material used to repair coating, and types of chairs, spacers and tie wire for all concrete reinforcement.
3. All proposed changes to the size, spacing or arrangement of the reinforcing steel shown on the Contract Drawings shall be clearly flagged as such on the shop drawings.

B. Catalog Cuts, Material Certification and Test Results

1. As per Division 1, "Shop Drawings, Catalog Cuts and Samples".
2. Catalog cuts for chairs, spacers, and hangers.
3. Certified mill test reports for all concrete reinforcement.

C. Samples

1. As per Division 1, "Shop Drawings, Catalog Cuts and Samples".

PART 2 – PRODUCTS

2.01. MATERIALS

A. Reinforcing Bars: ASTM A 615, deformed, Grade 60, unless otherwise shown on the Contract Drawings.

B. Welded Wire Fabric: Types shall be as shown on the Contract Drawings and shall comply with the following:

1. Plain, ASTM A 185, flat sheets for size W5 and larger and coiled rolls for sizes below W5.

C. Deformed, ASTM A 497 flat sheets for sizes D5 and larger and coiled rolls for sizes below D5.

2.02. ACCESSORIES

A. Tie Wire: Provide minimum 16-gage, annealed type. Provide nylon, plastic, or epoxy-coated wire for use with epoxy-coated and galvanized reinforcing bars, if any.

B. Supports for Reinforcement: Provide bolsters, chairs, spacers, and other devices for spacing, supporting and fastening reinforcing bars and welded wire fabric in place. Use galvanized steel wire bar type supports complying with CRSI standards and as follows:

1. For supporting epoxy-coated reinforcing bars, use plastic coated supports, or supports fabricated from or coated with a dielectric material.

2. For slabs-on-grade, use supports with horizontal plate runners.

2.03. FABRICATION

A. Fabricate concrete reinforcement as shown on the Contract Drawings and on approved shop drawings, in accordance with ACI 315 "Tolerances".

B. Bend all concrete reinforcement cold. Heating of bars or wire fabric is prohibited.

PART 3 – EXECUTION

3.01. INSTALLATION

A. Place concrete reinforcement as shown on the Contract Drawings and on approved shop drawings. Where not shown on the Contract Drawings, comply with CRSI "Placing Reinforcing Bars".

B. Clean concrete reinforcement of loose rust, mill scale, earth, ice, and other materials that reduce or destroy bond with concrete.

C. Accurately position, support, and secure concrete reinforcement against displacement by formwork, construction, or concrete placement operations. Locate and support concrete reinforcement by chairs, runners, bolsters, spacers, and hangers in accordance with CRSI Manual of Standard Practice". Do not interfere with placement of embedded items.

D. When a vapor barrier is shown on the Contract Drawings, do not cut or puncture during concrete reinforcement placement.

E. Place concrete reinforcement to obtain covers shown on the Contract Drawings for concrete protection, or in accordance with ACI 318 "Concrete Protection for Reinforcement", if not shown on the Contract Drawings. Arrange, space and securely tie bars and bar supports to hold concrete reinforcement in position during concrete placement operations. Set ties so ends are directed into concrete, not toward exposed concrete surfaces.

F. Install welded wire fabric in lengths as long as practical. Lap adjoining pieces at least one full mesh and lace splices with wire, but in no case shall lap be less than requirements of ACI 318 "Splices of Welded Deformed Wire Fabric in Tension" or "Splices of Welded Plain Wire Fabric in Tension". Offset end laps in adjacent widths to prevent continuous laps in either direction.

G. After concrete placement, do not field bend partially embedded concrete reinforcement except as shown on the Contract Drawings.

END OF SECTION

PART 1 – GENERAL

1.01 CONTRACT DOCUMENTS

A. Comply with Contract Documents:

1. All Work of this Section shall comply with the requirements of the Conditions of the Contract (General, Supplementary and Special), with all Sections of Division 1 – General Requirements, with this Section, with the Drawings and with all other Contract Documents.

1.02 WORK INCLUDED

A. The Work of this Section of the Specification shall include all labor, materials, plants, tools, equipment, appliances and services necessary to complete the Work as shown in the Drawings, as specified herein, as required by job conditions, and as required by governing authorities having jurisdiction.

1.03 CODES AND STANDARDS: The Contractor shall comply with provisions of the following codes, specifications and standards, except where more stringent requirements are shown or specified:

ACI 301, “Specifications for Structural Concrete for Buildings”

ACI 318, “Building Code Requirements for Reinforced Concrete”

International Building Code

NYS Uniform Code Supplement

Concrete Reinforcing Steel Institute, “Manual of Standard Practice”

1.04 SUBMITTALS

A. Reinforcing steel, dimensioned layout (including embedded items) shop drawings as well as other items as required, shall be submitted to Engineer for acceptance in accordance with the requirements of the Contract Documents.

B. Design Mix: Submit test results and other data on each concrete mix design, including aggregate graduations for each mix. Submit proposed mix designs within 45 days after notice to proceed, or at least 30 days before initial placement of concrete, whichever date is earlier.

1.05 QUALITY ASSURANCE

A. Use adequate numbers of skilled workmen who are thoroughly trained and experienced in the necessary crafts and who are completely familiar with the specified requirements and the methods needed for proper performance of the work of this Section.

PART 2 – PRODUCTS

2.01 CONCRETE INGREDIENTS

A. Cement: A standard brand Portland cement, accepted by Engineer, conforming to ASTM C150, Type I, II. Cement shall be from a single domestic source.

B. Aggregate: Coarse and Fine Aggregate shall conform to ASTM C33.

C. Water shall be potable

D. Admixtures:

1. Water-Reducing: The admixture shall conform to ASTM C494.

2. Air Entraining: The admixture shall conform to ASTM C260.

3. Prohibited Admixtures: Calcium Chloride, thiocyanates or admixtures containing more than 0.05% chloride ions are not permitted

E. Fly Ash shall conform to ASTM C618, Class C or F except that maximum carbon content shall not exceed 3 percent and maximum percentage retained on the #325 sieve shall not exceed 20 percent. Fly ash shall be from a single, domestic source.

2.02 FORMS: The Contractor shall furnish and place all forms as required and shall remove them as directed.

2.03 REINFORCEMENT MATERIALS

A. Reinforcing Bars: ASTM A615, Grade 60, new billet steel, deformed, produced by domestic manufacturer. Rail, axle, or re-rolled steel shall not be used.

B. Welded Steel Wire Fabric: Flat Sheets, ASTM A497 for sizes D4.0 and larger and A185 for sizes less than W4.0, produced by a domestic manufacturer.

C. Bar and Mesh Supports: Support reinforcement securely on precast concrete blocks or other methods as accepted by the Engineer.

2.04 MISCELLANEOUS MATERIALS:

A. Non-Shrink Grout: Non-shrink grout shall be “Masterflow 713” by Master Builders, “Crystex” by L&M Constuction Chemical Inc., “Euco NS” by the Euclid Chemical Co. or other accepted by Owner’s Representative. The factory pre-mixed grout shall conform to ASTM E1107, “Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Non-Shrink).”

B. Porous Fill under slabs-on-ground shall consist of clean, hard, durable, natural rock, free of organic matter, rock dust and other contaminants, and shall be well graded within the requirements of ASTM C33, Size #467. Material conforming to AASHTO Specification M80 will be accepted for use in the Work.

C. Vapor Barrier for slab-on-ground shall be Moistop Grade 395 by FortiFiber Corporation or Ply Bar Plus II by Glas-Kraft, Inc., or other accepted by Engineer. Lap sealant shall be the manufacturer’s recommended bonding material.

D. Drilled-In Anchors into Work shall be expansion type or adhesive type.

1. Expansion Type: Kwik Bold II by Hilti Fastening Systems, Tulsa, Oklahoma, Red Head Wedge Anchors, by ITT Phillips Drill Division, or other accepted by Engineer.

2. Adhesive Type: SET-XP by Simpson Strong-Tie, HIT RE500 by Red Head, or other accepted by Engineer.

2.05 CONCRETE

A. Concrete shall be air-entrained to 5+/- 1-1/2 percent, normal weight with compressive strength (f’c) of 4,000 psi minimum, a maximum slump of 5 +/- 1” inches, minimum 610 pounds of cement per cubic yard, and maximum water-cement ratio of 0.46.

B. Superplasticized Concrete: Prepare with a high-range, water-reducing admixture (HRWR). Contractor's mix design shall include also written descriptions of Contractor's methods for mixing, placing and conveying such concrete. HRWR mixes shall be prepared to provide concrete with 7 +/- 1-inch maximum slump while adhering to the water-cementituous ratio maximum specified. HRWR mixes shall arrive at the job site at 5 +/- 1 inch maximum slump, be verified, then high range water reducing admixture added to increase slump to an acceptable level.

C. Curing: All finished concrete shall be protected and kept moist continuously for a minimum of three days, and as directed.

D. Concrete slabs placed at air temperatures below 50° F shall contain non-corrosive accelerator.

E. Surface finish: Top shall be float finished or as directed.

END OF SECTION

PART 1 – GENERAL

1.01 SCOPE OF WORK

A. Furnish all labor, materials, and equipment to install precast concrete structures, frames and covers, access hatches, manhole rungs, ladders and appurtenances as shown on the Drawings and as specified herein.

1.02 RELATED WORK

A. Excavation, backfill and soil compaction are included in Sections 02221 and 02250.

B. Painting is included in Section 09900.

C. Cast-in-place concrete is included in Section 03300.

D. Reinforcing steel is included in Section 03210

1.03 SUBMITTALS

A. Shop drawings, product data, materials of construction, and details of installation shall be submitted in accordance with Section 01300. Submittals shall include the following:

1. Base sections, riser sections, eccentric and concentric conical top sections, flat slab tops, grade rings with notarized certificate indicating compliance with ASTM C478.

2. Pipe connection to manhole.

3. Manhole rungs, including method of installation and notarized certificate indicating compliance with pull-out resistance test specified in this Section.

4. Manhole frame and cover with notarized certificate indicating compliance with ASTM A48, Class 30.

5. Method of repair for minor damage to precast concrete sections.

B. Samples (if applicable)

C. Design Data

1. Precast concrete structures:

a. Eight copies of sectional plan(s) and elevations showing dimensions and reinforcing steel placement.

b. Eight copies of structural calculations including assumptions.

c. Eight copies of concrete design mix.

D. Test Reports

1. Precast concrete structures:

a. Six copies of concrete test cylinder reports from an approved testing laboratory certifying conformance with specifications.

1.04 REFERENCE STANDARDS

A. American Society for Testing and Material (ASTM)

1. ASTM A48 – Specification for Gray Iron Castings

2. ASTM A615 – Standard Specification for deformed and Plan Billet-Steel Bars for Concrete Reinforcement.

3. ASTM C32 - Specification for Sewer Manhole Brick (made from clay or slate)

4. ASTM C33 – Specification for Concrete Aggregates

5. ASTM C150 – Standard Specification for Portland Cement

6. ASTM C207 – Specification for Hydrated Lime for Masonry Purpose.

7. ASTM C443 - Specification for Joints for Circular Concrete Sewer and Culvert Pipe, Using Rubber Gaskets.

8. ASTM C478 – Standard Specification for Precast Reinforced Concrete Manhole Sections.

9. ASTM D4101 – Specification for Propylene Plastic Injection and Extrusion Materials.

B. American Concrete Institute (ACI)

1. ACI318 – Building Code Requirements for Reinforced Concrete.

2. ACI350R – Concrete Sanitary Engineering Structures.

C. Occupational Safety and Health Administration (OSHA)

D. Westchester County Department of Health (WCDH)

E. Where reference is made to one of the above standards, the revision in effect at the time of bid opening shall apply.

1.05 QUALITY ASSURANCE

A. All material shall be new and unused.

B. Materials' quality, manufacturing process and finished sections are subject to inspection and approval by Engineer, the WCDPW and WCDH. Inspection may be made at place of manufacture, at work site following delivery, or both.

C. Materials shall be examined for compliance with ASTM specifications, these specifications and approved manufacturer's drawings. Additional inspection criteria shall include: appearance, dimensions, blisters, cracks and soundness.

D. Materials shall be rejected for failure to meet any Specification requirement. Rejection may occur at place of manufacture, at work site or following installation. Mark for identification rejected materials and remove from work site immediately. Rejected materials shall be replaced at no cost to Owner.

PART 2 – PRODUCTS

2.01 GENERAL

A. Reference to a manufacturer's name and model or catalog number is for the purpose of establishing the standard of quality and general configuration desired.

B. Like items of material/equipment shall be the end products of one manufacturer in order to provide standardization for appearance, operation, maintenance, spare parts and manufacturer's service.

C. Provide lifting lugs or holes in each precast section for proper handling.

2.02 PRECAST CONCRETE SECTIONS

A. Precast concrete base sections, riser sections, transition top sections, eccentric cones, flat slab tops and grade rings shall conform to ASTM C478 and WCDPW standards and meet the following requirements:

1. Bottom slab thickness shall equal the riser wall thickness or top slab thickness, whichever is greater, or as shown on the drawings.

2. Riser and transition top sections shall have tongue and groove joints.

3. Sections shall be cured by an approved method.

4. Precast concrete sections shall be shipped after concrete has attained at least 4,000 psi compressive strength at 28 days.

5. Design precast concrete base, riser, transition top, flat slab top and grade ring for a minimum H-20 loading plus earth load.

6. Mark date of manufacture, name and trademark of manufacturer on the inside of each precast section.

7. Construct and install precast concrete base as shown on the drawings.

8. Provide integrally cast knock-out precast concrete panels at locations, and with sizes shown on drawings. Knock-out panels shall have no reinforcing steel.

9. Each joint shall be sealed using a butyl rubber seal, meeting the requirements of Federal Spec. SS-S-00210 (GSA-FSS).

2.03 ACCESS HATCH

A. Access hatches to be aluminum with stainless steel hardware, designed for H-20 loading and anchored to new concrete. Access hatch to be as manufactured by Halliday Products or equal. Size as shown on drawings.

2.04 LADDER

A. Contractor shall provide and install fiberglass ladder in the wet well valve chamber and flow meter chamber. Ladder shall be supported at every 4'-0'' o/c using stainless steel fasteners. Ladder rungs shall be 1'' dia. Or 1-1/4''x1-1/4''x 1/4'' square tube with factory applied non-skid solid bar grit safety surface. Side rails shall be 1-3/4''x 1-3/4'' x 1/4'' square tube. Ladders shall be as manufactured by FibreGrate or approved equal. Ladder in wet well shall be provided with stainless steel safety climb with ladder up post.

2.05 BRICK MASONRY

A. Bricks shall be sound, hard, uniformly burned, regular and uniform in shape and size. Underburned or salmon brick shall not be acceptable. Only whole brick shall be used.

1. Bricks for channels and shelves shall conform to ASTM C32, Grade SS except that the mean of five tests for absorption shall not exceed 8 percent and no individual brick exceed 11 percent.

2. Bricks for raising manhole frames to finished grade shall conform to ASTM C62.

B. Mortar shall be composed of one part Portland cement, two parts sand, and hydrated lime not to exceed 10 lbs to each bag of cement. Portland cement shall be ASTM C150, Type II; hydrated lime shall confirm to ASTM C207.

2.06 MANHOLE FRAME AND COVER

A. Manhole frames and covers shall be of good quality, strong, tough, even grained cast iron, smooth, free from scale, lumps, blisters, sand holes and defects of any kind which render them unfit for the service for which they are intended. Manhole covers and frame seats shall be machined to a true surface. Castings shall be thoroughly cleaned and subject to hammer inspection. Cast iron shall conform to ASTM A48, Class 30. Manhole frame and cover shall be “Type F” as manufactured by Campbell Foundry or approved equal.

2.07 JOINTING PRECAST STRUCTURES

A. Seal tongue and groove joints of precast structure sections with preformed flexible joint sealant.

B. Completed joint shall withstand 15 psi internal water pressure without leakage or displacement of gasket or sealant.

2.08 MANHOLE RUNGS

A. Manhole rungs shall be either of the following type:

1. Steel reinforced, copolymer polypropylene 14-inch wide, M.A. Industries, Inc., PF Series or equal. Copolymer polypropylene shall conform to ASTM D4101 Classification PP200 B33450 Z02. Steel reinforcing shall be continuous throughout rung.

2.09 PIPE CONNECTIONS TO PRECAST SECTIONS

A. Connect pipe to precast sections in the following ways:

1. Flexible sleeve – Integrally cast sleeve in precast section or install sleeve in a formed or cored opening. Fasten pipe in sleeve with stainless steel clamp(s). Coat stainless steel clamp(s) with bituminous material to protect from corrosion. Flexible sleeve shall be Lock Joint Flexible Sleeve; Kor-N-Seal connector; PSX Press-Seal Gasket or equal.

2. Compression gasket – Integrally cast compression gasket in precast section. Insert pipe into compression gasket. Compression gasket shall A-Loc, or equal.

PART 3 – EXECUTION

3.01 INSTALLATION

A. Precast Structure Installation

1. Precast structure shall be constructed to the dimensions shown on the drawings and as specified in these specifications. Protect all work against flooding and flotation.

2. Place precast base on a bed of 12-inch screened gravel as shown on the drawings. Set manhole base grade so that a maximum adjustment of 8 inches is required to bring the manhole frame and cover to final grade. Set base grade of other precast structures so that no top adjustment is needed.

a. Use precast grade rings or brick and non-shrink mortar to adjust manhole frame and cover to final grade.

3. Set precast concrete barrel sections and structures plumb with a ¼ inch maximum out of plumb tolerance allowed. Seal joints of precast barrel sections with preformed flexible joint sealant in sufficient quantity to fill 75 percent of the joint cavity. Fill the outside and inside joint with non-shrink mortar and finished flush with the adjoining surfaces.

4. Allow joints to set for 14 hours before backfilling unless a shorter period is specifically approved by the Engineer.

5. Plug holes in the concrete barrel sections required for handling with a non-shrinking grout or non-shrinking grout in combination with concrete plugs. Finish flush on the inside.

6. Core holes in precast sections to accommodate pipes prior to setting precast sections in place to prevent jarring, which may loosen the mortar joints.

7. Backfill carefully and evenly around precast sections in 12” lifts and compaction.

B. Pipe Connections

1. Construct manhole pipe connections, including pipe stubs, as specified above. Close or seal pipe stubs for future connections with a gasketed watertight plug.

C. Manhole Rung Installation

1. Steel Reinforced Polypropylene Plastic Manhole Rungs

a. Preform holes for manhole rungs during casting of the riser and cone sections, using tapered form pins specifically made for preforming manhole-rung holes.

b. Drive manhole rungs into preformed holes after concrete has developed a compressive strength of 4,000 psi.

c. Alternatively, cast manhole rungs into riser and cone sections when concrete is placed.

d. Drilling holes for manhole rungs may be used to accommodate field conditions when approved by the Engineer. Drill holes of diameter, spacing and depth required by manhole-rung manufacturer.

D. Setting Manhole Frame and Cover

1. Set manhole covers and frames in a full mortar bed. Utilize bricks a maximum of 8 inches thick, to assure frame and cover are set to the finished grade. Set manhole frame and cover to final grade prior to placement of permanent paving.

3.02 LEAKAGE TESTS FOR WET WELL

A. The Engineer will visually inspect structure(s) for possible cracks, voids, etc before backfilling of structures is allowed. Seal all joints to the satisfaction of the Engineer.

B. An exfiltration test on the wet well shall be performed in the presence of the Engineer, the WCDPW and WCDH representative.

3.01 CLEANING

A. Thoroughly clean all new structures of all silt, debris and foreign matter of any kind, prior to final inspections.

END OF SECTION

PART 1 - GENERAL

1.01 DESCRIPTION

A. Work covered by this Section includes the furnishing and installation of aluminum access doors as shown and required.

1.02 QUALITY ASSURANCE

A. “Specifications for Aluminum Structures” of the Aluminum Association.

B. Provide at least one person who shall be present at all times during the execution of this portion of the Work and who shall be thoroughly familiar with the type of materials being installed and the best methods for their installation and who shall direct all work performed under this Section.

C. All welding shall be performed by operators who have been recently qualified, as prescribed in "Qualification Procedure" of the American Welding Society, to perform the type of work required.

1.03 SOURCE QUALITY CONTROL

A. One mill analysis per type of material, unless otherwise specified elsewhere in these Specifications for particular materials.

1.04 SUBMITTALS

A. See Section 01300.

B. Fabrication and shop drawings, clearly indicating all sizes and materials.

C. Copies of all mill analyses.

D. Proposed methods for protection of dissimilar materials.

1.05 DELIVERY, STORAGE AND HANDLING

A. Carefully deliver, store and handle all aluminum access doors to avoid penetration of finishes, scratching or marring of exposed surfaces, bending, twisting, deforming and any other types of damages.

B. Take particular care in storing ferrous metals to avoid rusting.

PART 2 - PRODUCTS

2.01 ALUMINUM ACCESS DOORS

A. Stainless steel compression spring assist

B. Auto-lock stainless steel hold open arm with release handle

C. Stainless steel hinges and attaching hardware

D. Stainless steel slam lock with removable key.

E. Built-in neoprene cushion/gasket

F. Non-ozone depleting bituminous coating

G. AASHTO H-20 loading capacity

H. 25-year guarantee

Aluminum access doors/hatches shall be as manufactured by Halliday Products, Orlando, Florida and as a minimum shall be the following or as shown on the drawings:

24" x 42" – Single Leaf Model H1C2442 (Constant Head Box)
30" x 30" – Single Leaf Model H1C3030 (Flow Meter Manhole)

2.02 SPECIFICATIONS

A. Doors shall have a 1/4" thick, mill finish, extruded aluminum channel frame, incorporating a continuous concrete anchor.

B. 1-1/2" drainage coupling shall be located in the front left corner of the channel frame.

C. Bituminous coating shall be applied to the frame exterior where it will come into contact with concrete.

D. Door panels shall be 1/4" aluminum diamond plate, reinforced to meet AASHTO H-20 loading. PSF, and shall not protrude into the channel frame when in the open position.

E. Doors shall open to 90 degrees and automatically lock with stainless steel hold open arms with aluminum release handles.

F. Hold open arms shall incorporate enclosed stainless steel compression spring assists.

G. Doors shall close flush with the frame and rest on a built-in neoprene cushion/gasket.

H. Hinges and all fastening hardware shall be stainless steel.

I. Units shall lock with a stainless-steel slam lock with removable key and have a non-corrosive handle.

J. Units shall be guaranteed against defects in material and/or workmanship for a period of 25 years.

PART 3 - EXECUTION

3.01 PREPARATION

A. Make all necessary field measurements prior to shop drawing submittal to ensure precise fit of all items and verify that the aluminum access doors installed in strict accordance with the original design.

B. Do not proceed with fabrication or installation until conditions are satisfactory.

3.02 COORDINATION

A. Provide templates and setting drawings for embedments. Deliver and install all items at the proper time so that items to be embedded will be available when required.

3.03 DISSIMILAR MATERIALS

A. Aluminum - Do not allow aluminum to come in contact with other metallic materials (except zinc, zinc coated metals and stainless steel), concrete, absorbent materials likely to be continuously or repeatedly wet, or wood containing wood preservatives (other than pentachlorophenol, Wolman salts, creosote or zinc naphthenate). Aluminum surfaces which may contact dissimilar materials shall be protected with a coating of asphalt or zinc chromate primer, separated by a gasket or by any other approved method. Fasteners shall be stainless steel.

B. Stainless Steel - Protect stainless steel from contact with all other metallic materials, except aluminum, in the same manner as that specified for aluminum. Use only stainless-steel fasteners.

C. Other Materials - Protect all other dissimilar materials in the same manner as that specified for aluminum and use only fasteners of like material.

3.04 FABRICATION

A. Fabricated metal work shall be well formed to shape and size, with sharp lines and angles. Shearing and punching operations shall leave clean, true lines and surfaces. Weld or high strength bolt all permanent connections. All curved work shall be evenly sprung.

B. Castings shall be sound and free from warp, holes or other defects that impair their strength or appearance. Exposed surfaces shall have a smooth finish and sharp, well defined lines and arises. Machine joints, where required, shall be milled to a close fit. Provide necessary rabbets, lugs and brackets so that work can be assembled in a neat and substantial manner.

C. Conceal all fastenings where practicable. If impracticable, submit other methods of fastening for approval. The thickness of metal and details of assembly and supports shall give ample strength and stiffness. Joints which will be exposed to the weather when erected shall be formed to exclude water. Provide all holes and connections for the work of other trades.

D. Perform all welding in accordance with the "Structural Welding Code" of the American Welding Society. Welding shall be continuous along entire area of contact, except where tack welding is permitted. Tack welding is not permitted on exposed surfaces. Corners of structural shapes shall be mired.

E. Supplementary parts necessary to complete each item, though such work is not definitely shown or specified, shall be included. All miscellaneous metal work, where not shown in detail on the Drawings, shall be designed by the fabricator in accordance with good accepted standard practice.

F. Details shall be designed for appearance as well as utility. Protruding members, joints, corners, and the like shall be finished in appearance.

3.05 INSTALLATION

A. Work shall be in conformity with the Drawings, and with approved shop drawings, accurately located and set to required grades and levels, securely fastened in place, and complete in every respect.

B. Items to be cast into concrete shall be accurately positioned and securely held in place while concrete is being placed. Attachment to metal shall be by welding or bolting, as approved. Required holes in metal shall be drilled to proper size; burning of holes is not permitted.

C. Provide built-in anchors and bolts at all locations where practicable. Where impracticable, use expansion bolts to attach work to concrete and solid

masonry and toggle bolts for attaching to hollow masonry. Expansion bolts are not permitted for use on work which is subject to vibration or movement.

3.06 ADJUST AND CLEAN

A. After initial installation, make all final adjustments which may be required.

B. Touch-up all shop coatings damaged during transportation, storage, or installation, or where voids exist, using the primer paint used for the original shop coats. Runs, sags, drips and rust on exposed surfaces are not permitted.

C. Remove all protective coverings, clean all metal of all foreign materials and repair or replace defective work.

3.07 PROTECTION

A. Protect the work at all times and repair or replace any damaged work.

END OF SECTION

NO TEXT
THIS PAGE WAS INTENTIONALLY LEFT BLANK

PART 1 – GENERAL

1.01 SCOPE

Work of this Section shall include all labor, materials, equipment, plant and incidentals required to complete all painting and all spray-on sealant application as indicated on the Drawings and specified herein below.

1.02 WORK NOT INCLUDED

A. Do not include painting which is specified under other Sections.

B. Unless otherwise indicated, painting is not required on surfaces in concealed areas and inaccessible areas such as furred spaces, utility tunnels, pipe spaces, and duct shafts.

C. Metal surfaces of anodized aluminum, stainless steel, chromium plate, copper, bronze, and similar finished materials will not require painting under this Section except as may be specified herein.

D. Do not paint any moving parts of operating equipment such as vents, etc., unless otherwise indicated.

E. Do not paint over any required labels or equipment identification, performance rating, name, or nomenclature plates.

1.03 DEFINITIONS

The term "paint", as used herein, means all coating systems materials including primers, emulsions, epoxy, enamels, sealers, fillers and other applied materials, whether used as prime, intermediate or finish coats.

1.04 QUALITY ASSURANCE

A. Qualification of Manufacturer: Products used in the work of this Section shall be produced by manufacturers regularly engaged in the manufacture of similar items and with a history of successful production acceptable to the County Engineer.

B. Qualifications of Workmen:

1. Provide at least one person who shall be present at all times during execution of the work of this Section, who shall be thoroughly familiar with the specified requirements and the materials and methods needed for their execution, and who shall direct all work performed under this Section.

2. Provide adequate numbers of workmen skilled in the necessary crafts and properly informed of the methods and materials to be used.

3. All work of this Section shall be performed in the most professional workmanlike fashion. The County Engineer shall be the sole judge of all completed work.

C. Paint Coordinator:

1. Provide finish coats which are compatible with the prime coats used.

2. Review other Sections of these Specifications as required, verifying the prime coats to be used and assuring compatibility of the total coating system for the various substrata.

3. Upon request, furnish information on the characteristics of the specific finish materials to ensure that compatible prime coats are used.

4. Provide barrier coats over non-compatible primers, or existing coatings, or remove the primer and re-prime as required.

5. Notify the County Engineer in writing of anticipated problems in using the specified coating systems over prime coating supplied under other Sections.

1.05 SUBMITTALS

A. Manufacturer's Data: Within 15 calendar days after award of the contract, submit:

1. Complete materials list of all items proposed to be furnished and installed under this Section.

2. Manufacturer's specifications and other data required to demonstrate compliance with the specified requirements.

3. For information only, submit two (2) copies of manufacturer's specifications, including paint analysis and application instructions for each material. Indicate by transmittal, that a copy of each manufacturer's instructions has been distributed to the applicator.

Upon receipt of review comments, make all revisions and corrections, and resubmit if so required.

B. Samples:

1. Following the selection of colors and glosses by the County Engineer, as described in Paragraph 2.1.D below, submit samples for the County Engineer’s review.

a. Provide two samples of each color and each gloss for each

material on which the finish is specified to be applied.

b. Except as otherwise directed by the County Engineer, samples shall be approximately 12" square.

c. If so directed by the County Engineer, submit samples during progress of the work of this Section in the form of actual application of the approved materials on actual surfaces to be painted.

2. Revise and resubmit each sample, as required, until the County Engineer's approval of gloss, color, and texture is achieved.

1.06 PRODUCT HANDLING

A. Delivery of Materials: Deliver all materials to the job site in original, new, and unopened containers bearing the manufacturer's name and label showing at least the following information:

1. Name or title of the material;

2. Fed. Spec. number, if applicable;

3. Manufacturer's stock number;

4. Manufacturer's name;

5. Contents by volume for major constituents;

6. Thinning instructions;

7. Application instructions.

B. Storage of Materials: Provide proper storage to prevent damage to, and deterioration of, paint materials.

C. Protection: Use all means necessary to protect the materials of this Section before, during, and after installation and to protect the work and materials of all other trades.

D. Replacements: In the event of damage, immediately make all repairs and replacements necessary to the approval of the County Engineer and at no additional cost to the County.

1.07 JOB CONDITIONS

A. Surface Temperatures: Do not apply solvent-thinned paints when the temperature of surfaces to be painted and the surrounding air temperature are below 45 degrees F, unless otherwise permitted by the manufacturer's printed instructions

as approved by the County Engineer.

B. Weather Conditions: Do not apply paint in snow, rain, fog, or mist; or when the relative humidity exceeds 85%, or to damp or wet surfaces; unless otherwise permitted by the manufacturer's printed instructions as approved by the County Engineer. Applications may be continued during inclement weather within the temperature limits specified by the paint manufacturer during application and drying periods.

1.08 EXTRA STOCK

A. Amount: Upon completion of the work of this Section, deliver to the user agency, an extra stock equaling 10% of each color, type and gloss of paint used on the work.

B. Packaging: Tightly seal each container and clearly label with the contents and location used.

PART 2 – PRODUCTS

2.01 MATERIALS

A. Design is based on use of paint products manufactured by Benjamin Moore, and the materials of that manufacturer are named in the Painting Schedule. Equal products of Sherwin Williams, PPG Industries, or Con-Lux Coatings approved in advance by the County Engineer may be substituted.

B. Spray-on sealant shall be a VOC compliant, 100% acrylic water-repellent transparent sealer. Product shall be 'White Roc W by Sonneborn, Degussa Construction Chemicals or approved equal.

C. General: Provide the best quality grade of the various types of coatings as regularly manufactured by paint materials manufacturers approved by the County. Materials not displaying the manufacturer's identification as a standard "best grade" will not be acceptable.

D. Durability: Provide paints of durable and washable quality. Do not use paint materials which will not withstand normal washing as required to remove pencil marks, ink, ordinary soil, and similar material without showing discoloration, loss of gloss, staining, or other damage.

E. Colors and Glosses: The County Engineer will select colors to be used in the various types of paint specified and will be the sole judge of acceptability of the various glosses obtained from the materials proposed to be used in the work.

F. Undercoats and Thinners: Provide undercoat paint produced by the same manufacturer as the finish coat. Use only the thinners recommended by the paint

manufacturer, and use only to the recommended limits. Insofar as practicable, use undercoat, finish coat, and thinner material as parts of a unified system of paint finish.

G. Standards: Provide paint materials which meet or exceed the standards listed for each application in the Painting Schedule in Part Three of this Section.

2.03 OTHER MATERIALS

All other materials, not specifically described but required for a complete and proper installation of the work of this Section, shall be new, first-quality of their respective kinds, and as selected by the Contractor subject to the approval of the County Engineer.

PART 3 – EXECUTION

3.01 SURFACE CONDITIONS

A. Inspection: Prior to installation of the work of this Section, carefully inspect the installed work of all other trades and verify that all such work is complete to the point where this installation may properly commence. Verify that painting may be completed in strict accordance with the original design and with the manufacturers' recommendations as approved by the County Engineer.

B. Discrepancies: Do not proceed in areas of discrepancy until all such discrepancies have been fully resolved.

3.02 MATERIALS PREPARATION

A. General:

1. Mix and prepare painting materials in strict accordance with the manufacturer's recommendations as approved by the County Engineer.

2. Store materials not in actual use in tightly covered containers.

3. Maintain containers used in storage, mixing, and application of paint in a clean condition, free from foreign materials and residue.

B. Stirring: Stir all materials before application to produce a mixture of uniform density, and as required during the application of materials. Do not stir into the material any film which may form on the surface. Remove the film and, if necessary, strain the material before using.

3.03 SURFACE PREPARATION

A. General:

1. Perform all preparation and cleaning procedures in strict accordance with the paint manufacturer's recommendations as approved by the County Engineer.

2. Remove all removable items which are in place and are not scheduled to receive paint finish, or provide surface-applied protection prior to surface preparation and painting operations.

3. Following completion of painting in each space or area, reinstall the removed items by using workmen skilled in the necessary trades.

B. Preparation of Metal Surfaces:

1. Thoroughly clean all surfaces until they are completely free from dirt, oil and grease.

2. On galvanized surfaces, use solvent for the initial cleaning and then treat the surface thoroughly with phosphoric acid etch. Remove all etching solution before proceeding.

3. Allow to dry thoroughly before application of paint.

3.04 PAINT APPLICATION

A. General:

1. Slightly vary the color of succeeding coats. Do not apply additional coats until the complete coat has been inspected and approved. Only the inspected and approved coats of paint will be considered in determining the number of coats applied. All coatings shall be applied to the mil thicknesses recommended by the paint manufacturer for each coat.

2. Sand and dust between applications of enamel coats to remove all defects visible to the unaided eye from a distance of five feet.

3. On all removable panels and all hinged panels, paint the back sides to match the exposed sides.

B. Drying:

1. Allow sufficient drying time between coats. Modify the period as recommended by the material manufacturer to suit adverse weather conditions.

2. Oil-base and oleo-resinous solvent-type paints shall be considered dry for recoating when the paint feels firm, does not deform or feel sticky under moderate pressure of the thumb, and the application of another coat of

paint does not cause lifting or loss of adhesion of the undercoat.

C. Brush Application: Brush out and work all brush coats onto the surface in an even film. Cloudiness, spotting, holidays, laps, brush marks, runs, sags, ropiness, and other surface imperfections will not be acceptable.

D. Spray Application:

1. Confine spray application to metal framework and similar surfaces where hand brush work would be inferior.

2. Wherever spray application is used, apply each coat to provide the equivalent hiding or brush-applied coats. Do not double back with spray equipment for the purpose of building up film thickness of two coats in one pass.

E. Completed work shall match the approved samples for color, texture, and coverage. Remove, refinish, or repaint all work not in compliance with specific requirements.

3.05 PAINTING SCHEDULE

A. General: Painting and finishing required under this Section is specified as follows:

1. Pre-primed exterior ferrous metal (High Gloss Finish/Alkyd):
Prime Coat: 'Iron Clad Retardo' Rust Inhibitive Paint
Finish: Two coats 'Impervo' Enamel

2. Interior plaster and drywall (Eggshell Finish/Latex):
Prime Coat: Latex Quick Dry Prime Seal
Finish: Two coats Regal Aquavelvet.

3. Interior wood to receive paint (Semi-Gloss/Alkyd):
Prime Coat: 'Moore's Alkyd Enamel Underbody
Finish: Two coats Alkyd Dulamel

PART 1 - GENERAL

1.0 GENERAL

A. The Automatic dialer shall be a self-contained microprocessor-controlled system capable of monitoring and controlling up to 40 alarm channels, with the capability of immediately controlling 16 channels. The system shall be modular in construction, allowing up to 4 input/output Expansion Cards to be installed and configured for operation by the user by means of the built-in keypad and remotely by touch-tone phone. Characteristics of Input and Output channels include Universal Input and Digital Relay Output.

B. Upon detection of any alarm or status change, the system shall commence dialing telephone numbers from a list associated with the particular alarm condition(s) or combination thereof and deliver a voice message identifying and describing the alarm condition(s). The alarm message shall be delivered in digitized human voice using messages recorded by the user. The system will continue to call telephone numbers in succession until a positive acknowledgement of the alarm message is received. Acknowledgement is accompanied by depressing tone keys from the called telephone, or by calling the system back within a programmed time period. The alarm may also be acknowledged using the local keypad. In addition, the system shall be able to receive incoming telephone calls. Upon answering, the system shall recite a menu of options and allow access to remote operation and programming.

C. The system shall be FCC registered for direct connection to the telephone network. The system shall have a one-year warranty from the manufacturer. The system shall be a Sensaphone® Express II by Phonetics, Inc.

1.1 I/O CHANNEL ATTRIBUTES AND FEATURES

A. Inputs

1. The system shall come standard with 8 universal input channels. Up to 32 additional universal input channels may be installed by the user. Twelve (12) additional channels shall be immediately installed for the use of a total of eighteen (18) channels immediately upon installation. All input channels shall be user-configurable as:

    a. NO or NC digital dry contact, using 0.8mA loop current
    b. 4-20mA analog, using custom look up table
    c. 0-5V analog, using custom look up table
    d. Pulse count
    e. Temperature from thermistor, using 2.8K or 10K devices (-80°F to 300°F)
    f. Time accumulator

2. The system shall have the following built-in monitoring features:

a. AC power failure detection
b. Sound level monitoring
c. Low battery detection

3. All monitored channels, including built-in monitoring features, shall allow keyboard and remote touch-tone programming of pertinent operational data including, but not limited to:

a. Input type (NO/NC, 4-20mA and 0-5V analog, pulse count, thermistor, time accumulator
b. High and Low limits (-9999 to +9999)
c. Input recognition time (0 seconds to 12 hours)
d. Alarm reset time (0 seconds to 12 hours)
e. Phone Contact list for each channel
f. Enable/disable for each channel to dialout for alarm

B. Outputs

The system shall have one built-in SPST latching 2A 250VAC relay output. The output may be programmed to switch automatically on alarm or manually via keyboard or Touch-Tone™ phone. Up to sixteen (16) additional relay output channels may be installed by the user.

1.3 COMMUNICATIONS FEATURES

A. Telephone Specifications

The system shall connect to a standard 2-wire telephone line using pulse or tone dialing methods, with loop start only. The system shall recognize ringer frequencies from 16 to 60 Hz. No leased or dedicated lines shall be required. The system shall also be capable of being used on the same telephone line as other answering devices. Call progress detection shall ensure that the alarm dialout is not hindered by no-answers or busy signals.

B. Telephone Numbers

1. The system shall be capable of dialing up to 48 telephone numbers, 40 digits each. There shall be a capacity to program, retain and use three separate lists based on a calling schedule of weekday, weeknight and weekend. Each list shall contain up to 16 phone numbers. In addition, individual phone contact lists may be programmed for each input channel.

2. The system shall allow local keypad and remote touch-tone programming of the following telephone dialing information:

a. Dialing method (Automatic, pulse, tone)
b. Retries on busy (0 to 15)
c. Message repetitions (0 to 10)

d. Maximum number of calls (0 to 65,535)
e. Call delay time (0 seconds to 12 hours)
f. Intercall delay time (0 seconds to 12 hours)

C. Voice Messages

1. The System shall have the ability to record, store and reproduce voice messages and to use those messages to articulate the location and status of the monitored channels. In absence of user-recorded voice messages, the system shall articulate channel status using the internally resident vocabulary. All digitized speech message data shall be stored in nonvolatile memory with a 3V lithium battery backup. Such battery backup shall be capable of protecting speech memory for at least 2 years of complete power outage.

2. There shall be one recorded identification message for the system, and one recorded alarm message for each input channel. A message may also be recorded for each output channel on the optional output expansion card. Message length shall be selectable from 5 to 11 seconds per input or output channel.

1.4. PROGRAMMING

A. Local Programming

The System shall contain an integral, sealed, alphanumeric keypad for the purpose of locally programming all system data. Programming is assisted by synthesized voice guidance. All operational data, system setup and configuration data, and all information regarding the monitored I/O channels shall be displayed on the LCD display panel. No display manipulation shall be required to view and assess the status of I/O points.

B. Remote Programming

The system shall be remotely programmable using a standard touch-tone telephone. All operational data, system setup and configuration data, and information regarding I/O channels shall be accessible and programmable. A user-programmable security password shall protect the system from unauthorized tampering. Remote programming shall be aided by menu-style voice guidance.

1.5. SYSTEM FEATURES

A. Power

The system shall be provided with a UL/CSA listed 15VAC grounded power transformer that the user may plug into a 120V AC outlet, ±20%, 60Hz. The unit shall provide battery backed by 12 volts DC (up to 100mA) and 24 volts DC (up to 400mA) to power 4-20mA current loops or other external devices.

B. Battery Backup

The system shall have a built-in 12V 3 AH sealed lead-acid rechargeable battery. This battery shall support approximately 6-12 hours of continued system operation in the absence of AC power.

C. Local Visual Indication

Each input shall have a corresponding LED that will indicate the alarm and acknowledgement status of each input. The system shall also have an LCD display that will list information about the current system status and input/output status.

D. Data Log

The system shall be capable of logging the input values on a user-defined time period via a serial printer. The system shall also log all system and alarm activity including, but not limited to: programming changes, alarms occurring and clearing, acknowledgments, call-ins, and alarm dialouts. The system shall be able to print the log information to a printer hooked up to its built-in RS232 serial port.

E. Halt Mode

The system shall be capable of entering a halt mode upon user command in which all inputs shall be disabled and dialout prevented. Halt mode shall end automatically after a preprogrammed time period.

F. Diagnostics and Testing

System diagnostics shall be performed each time the unit is started. The system shall be capable of performing a simulated alarm dialout for testing. The dialout can be requested locally or remotely.

G. Security

The system shall allow the user to lock the keypad to prevent unauthorized local or remote access unless a security password it entered.

1.6 REMOTE OPERATION FEATURES

A. Status Report

The system shall allow the user to call into the unit at any time using any standard telephone to obtain full status report of all monitored channels. The status report shall be articulated using the resident voice-synthesized English vocabulary, in combination with digitized user-recorded voice messages.

B. Acknowledgement

An alarm on any monitored channel may be acknowledged remotely by pressing tones on a touch-tone telephone keypad or by calling the system back within a specified time period. An alarm may also be acknowledged.

1.7 ENCLOSURE AND ENVIRONMENTAL

A. Enclosure

The system shall be housed in a NEMA-4X fiberglass enclosure with a latched window cover and shall be internally constructed such that modular plug-in expansion cards may be used to facilitate field upgrades, repair, and maintenance.

B. Electrical Protection

Power and telephone connections shall have internal spike and surge protection using metal oxide varistors. All input channels shall have fault protected input circuits.

C. Additional Electrical Surge Protection

Additional Power and Telephone line surge protection shall be available from the manufacturer. When so installed, the system shall be fully warranted against any damage caused by transient surges entering the system through Power or Telephone lines.

D. Environmental

The system shall function over an operating range of 32°F - 120°F at up to 0 – 90% RH, non-condensing. The system may be stored over the temperature range of 0° - 130°F.

E. Maintenance

The system manufacturer shall have in-house service facilities and technical assistance available during normal business hours, Monday – Friday 8AM – 5PM (EST).

F. Safety Approvals

The system shall be approved by a Nationally Recognized Testing Laboratory (NRTL) to UL Standard 1950 “Information Technology Equipment” and CSA Standard 22.22 #950.

1.8 SUBMITTALS

Submit product data in accordance with Section 01300.

PART 2 – PRODUCTS

2.1 AUTOMATIC TELEPHONE DIALER MODEL

A. Contractor shall furnish Sensaphone Model FGD-6700 Express II or approved equal.

2.2 ALARM INPUTS

A. Unless otherwise specified elsewhere, the eighteen (18) input channels shall be designated for:

1. Equalization Tank Float High Water Level Alarm
2. Equalization Tank Float Low Water Level Alarm
3. Equalization Tank Control Panel Power Failure
4. Equalization Tank Control Panel Common Alarm
5. BESST Blower Failure Alarm
6. BESST Mixer Failure Alarm
7. BESST Control Panel Sludge High Level Alarm
8. BESST Control Panel Power Failure
9. Influent Screen High Water Level Alarm
10. Tertiary Filter Backwash Pump Low Water Level Alarm
11. Tertiary Filter Backwash Surge Pump High Water Level Alarm
12. Tertiary Filter Control Panel Power Failure
13. Tertiary Filter Control Panel Common Alarm
14. Power Failure
15. Power Operating on Generator
16. Spare

PART 3 - EXECUTION
(NOT UTILIZED)

END OF SECTION

PART 1 - GENERAL

1.01 CONTRACT DOCUMENTS

A. All work of this section shall comply with the requirements of the conditions of the Contract with all sections of DIVISION 1 - GENERAL REQUIREMENTS, with this section, with the drawings and with all other Contract Documents.

1.02 UL-LISTED PRODUCTS

Provide new UL-listed fire extinguishers bearing UL "Listing Mark" for type, rating, and classification of extinguishers indicated.

1.03 SUBMITTALS

Submit product data in accordance with Section 01300.

1.04 MANUFACTURERS

Subject to compliance with requirements, provide products by one of the following:

A. J. L. Industries
B. Johnson-Lee, Div. of W. F. Lee Corp.
C. Larsen's Manufacturing Co.

PART 2 - PRODUCTS

2.01 FIRE EXTINGUISHERS

Provide fire extinguishers of Multi-Purpose carbon dioxide type: UL-Rated 10B:C, 10-lb. Nominal capacity, in aluminum container.

2.02 MOUNTING BRACKETS

Manufacturer's standard, of proper size for type and capacity of extinguisher indicated. Provide brackets for extinguishers not located in cabinet.

A. Identify all bracket-mounted extinguishers with red letter decals spelling "FIRE EXTINGUISHER" applied to wall surface. Letter size, style and location selected by Engineer.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Install one (1) fire extinguisher in the STP Control Building, in accordance with manufacturer's directions for type of mounting required at height and location and to comply with applicable regulations of governing authorities.

END OF SECTION

PART 1 – GENERAL

1.01 DESCRIPTION

A. Scope: This section of the specifications covers the labor, materials, equipment and installation necessary to install one (1) Model MB260T 2MM automatic bar type fine screen with appurtenances for a complete operating system. Items of equipment include fine screen, slide gates, fabricated enclosure, removable baskets, anchors and fasteners. All equipment items shall be supplied by a single supplier to insure a complete working system.

B. One (1) Mechanically Cleaned Bar Screen will be used at the headworks of the wastewater treatment plant to remove debris including stringy rag-like materials from the influent sewage. The screen shall not become blinded by rags or hair or other particles during operation. Screenings shall be continuously discharged by a mechanical scraper arm to the screw compactor located at grade.

C. Design Data:

a. Model Number: MB260T
b. Type: Mechanically Cleaned Tapered Bar Screen
c. Screen Opening: 2mm
d. Screen Angle: 65°
e. Screen Length: 3’-11”
f. Screen Width: 8¼”
g. Tank Width: 1’- 6”
h. Tank Length: 3’-3”
i. Tank Height: 1’- 11”
j. Screen Discharge Height: 1 - 6½”
k. Application Peak Flow: 179 gpm
l. Wastewater: Domestic 200-500mg/L TSS
m. Power: 1/50 HP, 40 Watt, 3Ø, 208Volt, 60hz
n. Material: Main Frame, Micro Bar, Head Shaft, Rake Chain, Tail Shaft, Rake Chain Sprocket: Stainless steel 304L
o. Level Sensors: Included

1.02 QUALITY ASSURANCE

A. Acceptable Manufacturer: Or-Tec Inc, Blue Whale Micro Bar Screen. Alternative manufacturers/suppliers wishing to be considered for this project shall submit to the Engineer at least 2 weeks prior to Bid Date a full qualification package detailing full compliance with this specification. Manufacturers not meeting the performance, experience, and quality requirements of this project will not be pre-approved. Any alternative

manufacturers gaining approval by the Engineer will be identified via Addendum prior to the Bid Date.

B. The contract documents provide details of a complete equipment installation for the purpose specified. It shall be the responsibility of the Contractor to coordinate all the details required for a complete operating system, such as protective coatings, piping and wiring. The Contractor shall provide for all work required to properly install, adjust and place into operation a complete working system.

C. Washed and Dewatered Screenings Quality: Shall be capable of passing the US Environmental Protection Agency Paint Filter Test (EPA SW-846/9095) for disposal in a municipal landfill.

D. Manufacturer's Services: Manufacturer's personnel, for the equipment specified herein, shall be present at the job site for a minimum of one (1) day, travel time excluded, for inspection of installation, certification of field testing and adjustment, equipment start up, training and reviewing the Operations Manual. Two (2) additional one (1) day site visits will be scheduled by a factory trained service technician to review screen operation and ensure equipment is optimized. Additional field service will be provided, if needed, at a reasonable fee.

1.03 SUBMITTALS

A. Information required for approval by the Engineer prior to incorporation into the project shall include the following as a minimum requirement:

1. Certified dimension prints detailing all required concrete block-outs, anchor bolt locations and conduit stub-outs.

2. Specifications for all electrical and mechanical components and complete wiring diagrams for all the automatic functions.

3. Manufacturer's recommended procedures for jobsite storage and handling of equipment.

B. Operation and Maintenance Manuals: Prior to delivery of equipment and updated as required during installation of the equipment, the manufacturer shall furnish complete and detailed installation, operation and maintenance manuals which shall include the following as a minimum requirement:

1. Assembly, installation and adjustment instructions.

2. Maintenance instructions.

3. Complete descriptive literature of all materials and components furnished.

4. Erection drawings with equipment mark numbers.

1.04 WARRANTY

The manufacturer shall warrant the fine screens and other associated manufacturer supplied equipment against defects in material or workmanship for a period of two (2) years from the date of acceptance by the regulatory agencies.

PART 2 – PRODUCTS

2.01 STRUCTURE

A. The Micro Bar screen shall consist of a tapered-bar screen panel, two side frames, two chains with multiple, penetrating, cushion mounted rakes, a drive motor, a screen tank, level sensors and a control panel. Equipment shall be installed so as not to obstruct the flow of sewage to bar screen. Screen components including shapes (rods, angles, and channels) pipes, sheets, side frames and guides, bar rack, rake assembly, scraper assembly, shafting, discharge chute, fasteners and anchor bolts shall be manufactured from Type 304 stainless steel. Mechanical Screens with any of these items manufactured from materials other than 304 stainless steel shall not be acceptable. The screen shall be installed in Type 316 stainless steel tank with inlet flange, outlet flange, level sensors, and manual overflow screens.

2.02 TAPERED-BAR SCREEN PANEL

A. Screen panel face shall consist of a parallel array of tapered bars with even spaces between them. This opening shall be 2mm. Screens with larger openings between the bars allow more non-organic material, such as hair or other stringy material, to enter the plant and therefore shall not be acceptable for this project. The lower end of each bar shall have a notch at the bottom side, and the bars shall be clamped at the notch points by a lower spacer beam. The upper end of each bar shall be curved downwards so that it passes through the screenings lead plate and is inserted into the sectional bar holes of the upper spacer beam which is located at the bottom side of the screenings lead plate. The screens tapered bars shall extend 5” above the highest possible water level in the channel. Tapered bars are used rather than flat bar stock as tapered bars only have one pinch point making it easier to clean the gap between the bars. Screens which use flat bar for the screen array have a continual pinch point between them

making the gap between the bars prone to blocking. For this reason, use of flat bar stock in place of tapered bars shall not be acceptable.

B. The mid-section of the bar is cross-supported by v-notched support beams at 12" ~ 20" intervals. Screen bars shall be readily replaceable individually from the front of the screen without the need to remove the screen from the wastewater channel. Screens with screen bars that are not individually replaceable from the front of the screen shall not be acceptable for this project.

C. All material for tapered bars, lower spacer beam, upper spacer beam, screenings lead plate and the support beams shall be made of 304 Stainless Steel. This tapered-bar screen panel shall be mounted and bolted between a pair of side frames. Screens which utilize material other than stainless steel as the main screen media shall not be acceptable for this project.

D. The screen shall be a self-cleaning system using only the penetrating rake teeth to fully clean the gaps between the tapered bars and keep the screen operational. No water shall be required by the screen for any purpose. No brushes, rotating or otherwise, shall be required by the screen for any purpose. Screens that utilize brushes or require wash water shall not be acceptable for this project. Screens that use perforated flat panels in place of a bar screen will also not be acceptable.

2.03 SIDE FRAMES

A. A pair of side frames shall support the tapered bar screen panel between them. Bearings for head sprockets and bushings for tail sprockets with head shaft and tail shafts shall be mounted on them. Head bearings shall be heavy duty ball bearing with easy to access grease points. Tail sprocket bushings shall be graphite immersed phenol resin developed specifically for wastewater.

B. Guide rails shall be attached at the inside of the frames to ensure the systems chains and rakes run true. The guide rails shall be made of UHMW. Guide rails made of any material other than UHMW shall not be acceptable for this project as UHMW guide rails reduce the friction between the chain rollers and guide rails by 85% over standard stainless steel guide rails. This lower friction greatly decreases wear. Frames shall be made of 304 Stainless Steel plate of sufficient thickness to prevent deflection.

2.04 CHAINS, RAKES AND SPROCKETS

A. Rakes shall travel up the screen face cleaning the between the tapered bars openings with their penetrating teeth cleaning while lifting the captured

solids up to the top of the machine. The UHMW PE rakes shall be mounted on the chains on both sides of the side frames.

B. The rakes shall travel at approximately 12 ~ 15 feet/min. The rakes shall be mounted on the chain at no more than 48” intervals.

C. Rake assembly shall be guided over the discharge chute and the accumulated debris shall be removed by a scraper attached to the side frames. Scraper shall be designed to pivot to achieve effective cleaning of bar screen openings with the rake. The rake scraper shall be made of Type 304 stainless steel.

D. Discharge material from screen shall be directed to a tapered chute. Chute shall have a minimum slope of 55 degrees. The discharge chute shall be made of Type 304 stainless steel.

E. Screen chain head shaft sprockets and idling tail sprockets provided shall be manufactured of Type 304 stainless steel. Sprockets manufactured from materials other than Type 304 stainless steel shall not be acceptable. Sprockets shall be fitted to head shaft using precisely cut keyways.

F. Shafts provided shall be Type 304 stainless steel, straight and true, sized to transmit required power to the head sprockets.

G. Head shaft shall be equipped with heavy duty, grease-lubricated, adjustable, take-up bearing assemblies.

H. Tail shaft shall be equipped with heavy duty, lubrication-free, sealed graphite immersed phenol resin bushings. Screens with underwater bearings that require lubrication shall not be acceptable. Tail shaft bushing shall have a 5-year warranty.

I. The self-tensioning apparatus of the rake chains makes the static tension of the chain zero. By causing the chain to operate at zero tension, wear and tear on the chain is decreased. Designs which cause chains to operate above zero tension shall not be acceptable for this project. The chain shall be made of 304 Stainless Steel.

J. Heat tracing for the dead plate shall be provided. Temperature regulation shall be automatically monitored and adjusted by an adjustable thermostat. The heat trace will keep the system operational in -13°C. There will be a thermostat supplied to regulate the set point. The heating cable will be wrapped in a way to provide maximum heat efficiency. UL recognized self-regulating heating cable of 220 Volt Power, 5 watt/ft, 150°F process temperature shall be used. A terminal box for wiring power cable shall be equipped for the screen. Heat tracing shall be turned on and off by a thermostat equipped in the control panel of the screen and compactor.

K. Screen shall be capable of operating based on level sensor or I/O. Screen shall also be capable of operating continuously (24/7) when there is a continuous flow present if required. Screens which cannot operate according to all these parameters will not be acceptable.

2.05 DRIVE MOTOR

A. Equipment shall be provided complete with drive motors of totally enclosed geared induction type. A torque limiter combined with limit switch shall be provided between the motor and the head shaft in order to disconnect mechanical power in emergency situations.

B. System shall use a 15-watt, 230/460 VAC, 3 phase, 60hZ motor. Systems which require larger motors shall not be acceptable for this project.

2.06 SCREEN TANK

A. Then screen will be supplied with a stainless steel, structural tank which will support and contain the screen. The screen tank will be fabricated from 11-gauge Type 316 stainless steel. The tank shall be designed to be self-emptying.

B. The screen inlet with a be a 3” flange and the screen outlet will be 6” flanged

C. The screen tank shall be provided with two (2) Manual Screen Overflows

2.07 LEVEL SENSORS

A. Two (2) Level sensors shall be installed in the screen tank. These shall have the following functionality;
High: Screen-On / High High: Alarm.

2.08 CONTROL PANEL

A. The control panel shall be a NEMA 4X 304 stainless steel enclosure suitable for outdoor use and shall contain all electrical controls, wires, starters, terminals, relays, overloads, fuses and labels required for operation of the screen and ancillary equipment described herein. All controls shall be mounted in a single enclosure. Systems which require multiple control enclosures shall not be acceptable for this project.

B. The system shall be fully operational in both manual and automatic modes. The system mode selector switch shall allow the operator to select the desired mode. No other changes or programming by the operator shall be required.

C. In manual mode the screen will start and operate until it is turned off. In automatic mode the system will turn on based on a signal from the level

sensor provided or operate continuously if there is continuous flow to the screen. When using level sensors, the screen will operate for one minute based on the signal. If at the end of one minute the signal from the level sensor is still made the screen will operate for one more minute. When the level sensor in no longer made the screen will turn off and wait for the next signal.

D. The front of the control panel door shall include a main disconnect breaker switch (power on/off). In the off position all power to the control panel shall be off. An electronic over current monitor shall continuously monitor the motor and shall shut the motor down and alarm the panel in the event of over current draw. Manual reset shall be required.

E. The control panel shall contain the following. All switches and switching functions shall be clearly indicated by suitably engraved labels:

1. Nema 4X stainless steel outdoor duty enclosure housing:
2. Main disconnect, "thru the door" with door interlock.
3. Full voltage non reversing motor starter (IEC)
4. Control transformer with primary and secondary fusing.
5. Control power on/reset push button
6. Screen running green pilot light
7. General Red Fault Alarm
8. Hand/Off/Automatic Switch
9. Electronic Over Current Relay
10. Elapsed time meter
11. Lot, control relays, terminal blocks and related accessories
12. E-stop mushroom red pushbutton with twist reset
13. UL Listed Enclosure suitable for wall mounting
14. Dry contact outputs for Screen Run, General Fault, Over Current

PART 3 – EXECUTION

3.01 INSTALLATION

A. General: Install screen and associated components as shown on the plans and in accordance with manufacturer's instructions.

3.02 TESTING AND INSPECTION

A. General: Notify Owner and Engineer in writing when the installation is complete and ready for testing and start up.

B. Inspect components for proper installation, wiring and piping.

C. Operate all components and check for proper operation. Make necessary adjustments.

END OF SECTION

PART 1 – GENERAL

1.01 SCOPE OF WORK

A. Furnish a pre-engineered Odor Control System as hereinafter specified. The Odor Control System shall consist of two complete, parallel systems designed to function with one system in service at a time.

B. These Specifications are intended to give a general description of system requirements. They are intended to cover the furnishing, delivery and installation of all materials, equipment, and appurtenances for the complete Odor Control System.

C. It is the intention that the pre-engineered Odor Control System is to be supplied by one vendor and installed and paid for by the Contractor.

D. The Contractor shall provide the installation labor and material, all ductwork, electrical controls and system wiring, and all other component and appurtenance to provide a fully operational system.

1.02 WARRANTY

A. All equipment supplied under this Section of the Specifications shall be warranted for a period that is the earlier of one year from startup or 18 months from shipment.

B. The equipment shall be warranted to be free from defects in workmanship, design, and materials. If any part of the equipment should fail during the warranty period, it shall be repaired or replaced, at the sole discretion of the Manufacturer, as per the Manufacturer's standard Terms and Conditions.

1.03 DESCRIPTION OF SYSTEM

A. The Manufacturer shall furnish two (2) complete, pre-engineered odor control systems. The Manufacturer of the Odor Control Systems shall be responsible for the design and fabrication of the complete systems within the limits specified herein. Site preparation shall be the responsibility of the Contractor as described and as specified.

B. Odor Control Systems – Design Basis (2 Req.)

1. Foul Air Flow Rate (acfm) 304
2. System Inlet Pressure (in. wcg.): -2.0 (estimated)
3. Average Inlet H2S Level (ppm.): <5
4. Peak Inlet H2S Level (ppm.): <10

5. H_2S Removal Efficiency (%) > 99.0
6. Fan Total Static Pressure (in. wcg.): 6.0
7. Carbon Adsorber Dimensions (in.): 36" dia. by 4'-6" SWH

C. Ventilation Fan

1. Manufacturer: Cincinnati Fan Company
2. Model: PB10A
3. Drive: Direct Drive
4. Arrangement: 4 HM, Inlet Flange Mount
5. Rotation: Clockwise
6. Capacity (acfm): 304
7. Total Static Pressure (in. wcg.): 5.0
8. Fan Speed (rpm): 3450
9. Fan bhp (@304 acfm): 0.58
10. Motor
    HP: 0.75
    Speed (rpm): 3450
    Enclosure: TEFC, Class I, DIV2, Group D
    Voltage, Single-Phase (V.): 115/208-230
11. Sound Attenuator: LD4

D. Media System

First Stage

1. Type: SweetAire PC 30
2. Base Material: Activated Carbon
3. Particle Type, Size: Pelletized, 4 mm
4. Volume of Media (lbs.): 420
5. Bed Depth (in.): 24
6. Media Diff. Pressure Drop (in. wcg.): 2.0
7. Media Bulk Density (lbs./cu.ft.): 30

Second Stage

1. Type: SweetAire PP 700
2. Base Material: KMnO4 Impregnated Zeolite
3. Particle Type, Size: Granular, 4 x 6 Mesh
4. Volume of Media (lbs.): 420
5. Bed Depth (in.): 12
6. Media Diff. Pressure Drop (in. wcg.): 1.0
7. Media Bulk Density (lbs./cu.ft.): 60

1.04 QUALITY ASSURANCE

A. All components of the carbon adsorber systems shall be provided by a single manufacturer who shall have sole-source responsibility for the equipment elements detailed herein.

B. The manufacturer of the systems shall be recognized in the design and production of carbon adsorption air treatment systems. Upon request, the manufacturer shall provide with the submittal data, a list of five (5) carbon adsorption air treatment installations associated with the treatment of hydrogen sulfide and other malodorous compounds. The list shall include contact names, telephone numbers, and length of service for each named installation.

1.05 SUBMITTALS

A. Copies of all materials required establishing compliance with the specifications shall be submitted to the Owner's Engineer in the form of a booklet or binder. Submittals shall include at least the following:

1. Plan view drawing showing arrangement of treatment units and associated ductwork.

2. Product drawings and cutsheets, descriptive literature, bulletins, and catalogs on all equipment including but not limited to the following.

   a. Detailed physical drawings of the treatment units to include all external piping connections and associated sizes, and materials of construction.
   b. Control system schematic diagrams indicating necessary field connections.
   c. Control panel component manufacturer's data sheets.
   d. Product data sheets for the blower and drive motor including performance curve with operating point and data.
   e. Specification data for the activated carbon media.

B. List all exceptions taken to the specifications along with backup documentation as to why the exception has been taken. If it is impossible to conform with certain details of the Specifications due to different manufacturing techniques, describe and justify completely all non-conforming aspects.

1.06 PRODUCT HANDLING

A. All equipment items shall be properly protected so that no damage or deterioration will occur from the time of shipment until installation is completed and the units and equipment are ready for operation.

B. All exposed blower and equipment openings shall be protected.

C. Proper care shall be taken to protect mechanical parts from the entrance of water during shipment, storage, and handling.

D. Each box or package shall be properly marked to show its contents.

PART 2 – PRODUCTS

2.01 MANUFACTURERS

A. The odor control system components specified under this section shall be the end products of Sierra Environmental Technologies, Wildwood, MO. (636) 273-5189 to ensure that the unit integrity and quality of the completed assembly meets the original design specification and performance criteria.

B. Substitutions. Substitutions shall be considered only if the Engineer has received a written request at least two weeks prior to bid date. Bidders shall be notified by addendum if substitutions are acceptable. Requests for substitutions shall include technical and any other information required for evaluation.

2.02 OPERATING CONDITIONS

A. The odor control system shall be suitable for long-term operation under the following operating conditions.

1.	Duty:	Continuous
2.	Ambient environment:	Outdoor
3.	Ambient Temp. (°F):	-30 to 100
4.	Project site elevation (ft. MSL):	550 (average)
5.	Total air flow (SCFM):	304 each unit
6.	Average influent H_2S conc. (ppm):	<5
7.	Maximum influent H_2S conc. (ppm):	<10
8.	Removal required (%):	>99% H_2S

2.03 CAST ALUMINUM FANS

A. One (1) cast aluminum fan shall be as manufactured by Cincinnati Fan, Model PB10A, will mounted on the odor control housekeeping pad. The fans shall be equipped with a direct-drive 3/4 HP 1/60/208-230/460V premium efficiency, TEFC motor. The fan shall have a Teflon shaft seal and a stainless steel motor shaft. The discharge of the fan shall be equipped with a slide damper, connecting ductwork, and a galvanized steel sound attenuator unit.

2.04 FIBERGLASS (FRP) VESSELS

A. The vessels shall be fabricated from premium vinyl ester fire-retardant resin such as CORVE8441LH or approved equal.
B. Vessels shall be manufactured per ASTM D3299, D4097, and PS 15-69, as applicable.
C. See Part 4, "Odor Control System Schedule" for requirements.
D. Vessel design shall include a flat flanged bottom and a flat, gasket top with fiberglass grating media support system with polypropylene media retention screen.
E. Vessels shall be designed to contain the specified media.
F. Vessels shall be 36" diameter by 54" high.
G. Each vessel shall have an 6" diameter FRP pipe stub inlet with FERNCO connectors, ¾" FNPT drain fitting with PVC ball valve, two (2) 1" diameter FNPT half coupling carbon sample ports.
H. All mounting hardware shall be 316SS.

2.05 MEDIA SYSTEM – TWO-STAGE

A. First Stage Media – The first stage media (lower bed) shall consist of a bed of high H2S capacity activated carbon. The 4 mm pelletized carbon, SWEETAIRE PC30, has an H2S capacity of 0.3 gms H2S/cc carbon. This equates to an H2S capacity of 70% by weight. By comparison, caustic impregnated carbon has an H2S capacity of only 26% by weigh. The first bed of activated carbon, 14.4 cu. ft. (420 lbs.) is designed to remove most of the H2S in the system.

B. Second Stage Media – After passing through the first bed of media, the foul air will pass through a bed of potassium permanganate (KMnO4) impregnated zeolite granular media to remove the balance of the malodors. The secondary media, SweetAire PP600, will provide secondary removal of any remaining H2S as well as any other malodorous compounds that may be in the air stream. The secondary bed of media shall contain 7.0 cu.ft. (420 lbs.) of media.

2.06 ELECTRICAL CONTROL PANELS

A. The operation of each system shall be controlled by an electrical control panel with a type 304 stainless steel NEMA 4X enclosure. Refer to the project plans for the location of the panel. Two (2) combination starter electrical control panels; each with a disconnect switch, overload protection, auxiliary contacts, ON/OFF hand control and one (1) green "Running", and one red "Stopped" indicator light on the front door of the enclosure shall be provided. The electrical control panels shall be shipped loose to be field-mounted and field wired to the supply power service to the fan motors

PART 3 – EXECUTION

3.01 INSTALLATION

A. Installation by the manufacturer of each equipment item shall be in strict accordance with the Engineer's instructions and recommendations in the locations shown on the drawings.

3.02 INSPECTION, START-UP, AND OPERATOR TRAINING

A. A representative from the Manufacturer shall be present to perform the required inspection, start-up, and operator training services for the system. The Engineer will schedule this service with the Manufacturer's representative and his intended system operators.

3.03 TESTING

A. After all equipment has been completely installed according to the direction of the Manufacturer tests shall be performed in the presence of the Owner, representative of Westchester County Department of Public Works, Westchester County Department of Health and the Engineer to indicate that the System operates satisfactorily and will meet the design criteria set forth in Section 1.03B of the Specification. Visual inspection will be made at this time for any discrepancies, which shall be corrected. The field test shall demonstrate correct mechanical operation after system start-up. Field tests shall include all equipment included under this section.

END OF SECTION

THIS PAGE WAS INTENTIONALLY LEFT BLANK

PART 1 – GENERAL

1.01 SCOPE OF WORK

A. Furnish all labor, materials, equipment, and incidentals required and install complete, ready for operation and field test five (5) new rotary positive displacement tri-lobe blowers and appurtenances, as shown on the Drawings and as specified herein.

B. These Specifications are intended to give a general description of what is required, but do not cover all details that will vary in accordance with the requirements of the equipment application. It is, however, intended to cover the furnishing, delivery, complete installation and field testing of all materials, equipment and all appurtenances required to complete the Work of this Section, whether specifically mentioned in these Specifications or not. It is the Bidder's responsibility to comply with all the aspects of these specifications. Costs for evaluating proposals for similar or alternate equipment will be borne by the Bidder.

C. The entire blower package and its components shall comply with all applicable safety and environmental regulations. This specification does not limit the responsibility of the Bidder, who is expected to supply high quality equipment.

1.02 SUBMITTALS

A. Information of all materials required to establish compliance with this Section. Submittals shall include at least the following as required by Division 1300:

B. Certified shop and installation drawings showing materials, details of construction, dimensions and connections to work of other Sections.

C. The materials list should include complete bill of materials for all equipment.

1. Blower Data
2. Manufacturer of all components supplied
3. Model numbers of all component supplied
4. RPM
5. Capacity - acfm
6. Discharge pressure
7. Weights of each item of equipment
8. dBA noise level
9. Maximum gear tip speed and rotor tip speed (fpm)
10. List of recommended spare parts broken down into on hand parts and long term for 2 years operation and 3 to 5 years operation.
11. HP required at rated capacity and pressure
12. Rated maximum pressure rise of blowers
13. Bearing Life
14. Instrumentation data sheet

15. Motor Data
16. Valves
17. V-belt data
18. General arrangement drawings
19. ASME PTC – 9 Performance Test Results

D. Complete blower package operating and maintenance instructions, hard copy and electronic copy, shall be furnished for all equipment included under these specifications.

1.03 QUALITY ASSURANCE

A. Qualifications

1. All blowers and appurtenances furnished under this Section shall be furnished by a single manufacturer who is fully experienced, reputable and qualified in the manufacture of the equipment to be furnished. Blower Stage Manufacturer shall also provide a written warranty for the blower and blower package and shall state that they have reviewed the design and application and that the equipment has not been misapplied or the package been poorly designed.

2. The equipment shall be designed, constructed and installed in accordance with the best practices and methods and shall operate satisfactorily when installed as shown on the Drawings.

3. All equipment specified in this section shall be designed and manufactured by KAESER and supplied by DW Martine & Associates, LLC, 1221 Route 22E, Lebanon, New Jersey 08833 (908-236-8145).

1.04 SYSTEM DESCRIPTION

A. All of the equipment specified herein is intended to be standard equipment for use in an Aeration system.

1. The blowers shall provide air for process air for the BESST Process units, mixing for the sludge holding tank, equalization tank, and tertiary filter as well as air for the airlift pumps.

1.05 DELIVERY, STORAGE AND HANDLING

A. All equipment shall be completely factory assembled, skid mounted, crated, and delivered to protect against damage during shipment.

B. Factory assembled parts and components shall not be dismantled for shipment. Contractor shall not be required to do any job site assembly of the blower package and shall not disassemble any factory assembled component without blower manufacturer's written approval.

C. Finished surfaces of all exposed flanges shall be protected by wooden blank flanges, strongly built and securely bolted thereto.

D. Finished iron or steel surfaces not painted shall be properly protected to prevent rust and corrosion. No shipment shall be made until approved by the Contractor in writing.

E. All equipment delivered to the site shall be stored as specified in section entitled "General Equipment Stipulations" of these specifications, and in accordance with the manufacturer's instructions.

1.06 MAINTENANCE

A. Spare Parts and tools

1. Furnish the following minimum spare parts in accordance with the requirements of part 2 of these specifications:

   a. One complete set of bearings, gaskets, seals, V-belts, as required for each blower.
   b. One additional set of filter elements for each air inlet filter for each blower.
   c. One set of motor bearing.
   d. One year supply of oil

2. Spare parts shall be properly bound and labeled for easy identification without opening the packaging and suitably protected for long term storage in a humid environment. One set of Tools required for changing oil and performing belt maintenance shall be provided for each blower.

PART 2 - PRODUCTS

2.01 GENERAL

1) The use of a manufacturer's name and model number is for the purpose of establishing the standard of quality and general configuration desired. Products of other CE certified manufacturers will be considered in accordance with the General Conditions.

2) The blower package shall be a Com-paK Plus as manufactured by Kaeser Compressors, Inc., or an approved equal, which meets all the requirements of this specification. Alternate blower selections must be shown on a List of Exceptions to the Specifications with itemized descriptions of how the selection differs from the specifications.

3) Nameplates stating the name of the manufacturer, blower/blower package model number, blower/blower package serial number, the rated capacity, speed, and other pertinent data, shall be attached to each blower/blower package.

4) Nameplates stating the name of the manufacturer, the motor model number, the motor serial number, the rated horsepower, speed, voltage, amps, rated service factor, and other pertinent data, shall be attached to the motor.

2.02 CONSTRUCTION

A. Blower Type

The blowers shall be positive displacement, rotary tri-lobe type, designed for air or other inert gas service, and belt driven via electric motor.

B. Casing

The casing shall be made of high strength, close grained, cast iron, and shall be adequately ribbed to resist deflection and facilitate cooling. The casing shall be precision machined to allow for minimum clearances. The design of the housing shall allow for vertical and horizontal blower installation with minimal modification. The casing design shall incorporate channels at the discharge port to minimize pulsation.

C. Rotor Assemblies

The rotor assemblies shall be one piece and precision machined from high strength, close grain, spheroidal graphite ductile iron allowing smooth, efficient operation at all rated speeds and pressures. Rotors shall be closed-end using a threaded plug. The integral shafts shall be designed to carry higher loads than calculated for the maximum design load and shall incorporate replaceable seal ring wear sleeves. The rotor assemblies shall be statically and dynamically balanced. Removal of material from the face of the rotor for balancing purposes is not allowed. The rotors shall be a tri-lobe design in order to minimize pulsation and noise.

D. End Plates

1) The gear-end plate shall be cast iron. The drive-end plate shall be integral to the blower casing ensuring heavy-duty construction, long life, and maximum machine noise attenuation in all applications. Bearing fits shall be precision machined to ensure accurate positioning of the rotors in the casing. Replaceable seal wear inserts shall be provided on the drive-end and gear-end plates.

2) The end plate covers shall be heavy-duty cast iron with a precision machined sealing face. Aluminum oil sump covers are not allowed.

E. Timing Gears

1) The rotor timing gears shall be precision machined from case hardened and ground alloy steel. Each timing gear shall be straight cut and beveled to eliminate axial bearing loads and ensure long life as well as quiet operation.

2) Gears shall be finish ground on a precision grinder to ensure concentricity. The timing gear set shall be taper-mounted on the rotors for improved rebuild ability and accurate timing. Keyed, hub mounted, or taper-pinned timing gear mounting designs are not acceptable.

F. Bearings

All four shaft support locations shall incorporate large, heavy-duty cylindrical roller bearings designed to handle extreme radial loads without sacrificing product integrity and reliability. The minimum acceptable L10 design life at the blower's maximum rated speed and maximum rated differential pressure shall be no less than 70,000 hours.

G. Lubrication

Both the gear-end and the drive-end of the blowers shall be oil splash lubricated for minimal maintenance and long service life. Grease lubricated bearings are not acceptable. The lubrication design shall ensure adequate lubrication of the timing gears and bearings.

H. Seals

1) There shall be four (4) piston ring type labyrinth seals at each end of each rotor to minimize leakage and maintenance costs.

2) The cavity between the air-side and oil-side seals shall be vented through threaded ports to allow external purging or containment of any lubricating oil or process gas that may have migrated past the seals. Enough ports shall be incorporated in the design to ensure that the cavity is vented from the bottom no matter what the blower drive-to driven shaft orientation is utilized.

3) A vent cavity shall be provided on all four (4) sets of piston ring type labyrinth seals. The two (2) vent holes located on the bottom side of the blower shall be left open. The vent holes at other locations shall be closed off with threaded metal plugs.

4) The input drive shaft seal shall be a high temperature radial lip type seal with Viton elastomers. The seal design shall incorporate a replaceable wear sleeve on the input drive shaft.

I. Drive Motors

1) Drive motors shall be designed, manufactured, and tested in accordance with the latest revised editions of NEMA MG-1, IEC, IEEE, ANSI, and AFBMMA standards as applicable and shall be capable of continuous operation.

2) The motor nameplate horsepower rating shall not be exceeded at the design speed.

3) The temperature rise of the motor windings shall not exceed IEC and NEMA

standards when the motor is operated continuously at the rated horsepower, rated voltage, and rated frequency in ambient conditions of 40°C.

4) The motors shall conform to the following:

Mounting:	Horizontal
Type:	Squirrel Cage Induction
Enclosure:	Totally Enclosed – Fan Cooled
Service Factor:	1.15
Duty Cycle:	Continuous
Ambient Temperature Rating:	32.2°C
Starting Current:	6X Full Load Current Maximum
Winding Insulation:	Class F
Temperature Rise:	Class B
Voltage/Frequency/Phase:	208/60/3
Bearing Lubrication:	Oil, Oil Mist, or Grease (with grease addition fittings and grease relief fittings)
Speeds:	Single Speed

2.03 BLOWER PACKAGES

1. The packaged blowers are to be standard engineered designs of a CE certified manufacturer regularly engaged in the production of packaged blowers to ensure single source accountability and shall include the following listed standard features:

   a) The packages shall be driven through V-belts and sheaves. The drive assembly shall be of the high-capacity type, oil and heat resistant, with a minimum service factor of 1.5.

   b) Automatic tensioning of the V-belts by use of a pivoting, swing frame motor base with adjustable spring assistance and visual indication of V-belt tension shall be provided to ensure the V-belts remain properly tensioned with minimal maintenance and the extend V-belt, sheave, and bearing life. Adjustment of the tensioning device shall be accomplished without removal of the guard or loosening of the motor mounting bolts.

   c) The drive guard shall be the manufacturer's standard sheet metal with provision for ventilation. The installed guard shall be fully enclosed, easily removable, and designed to meet current OSHA recommendations and CE standards.

   d) The base shall be elevated, rigid, fabricated steel design with a solid sub-base. The absorptive-type discharge silencer shall be integral to the frame in order to minimize space requirements. The blower shall be mounted horizontally for a compact frame.

   e) To prevent transmission of vibration and noise, as well as secure the package to the foundation, the base shall include vibration isolators made of rubber in a steel

footing equipped with mounting holes for anchoring purposes.

f) Oil drains from the blower drive-end and gear-end lubricating oil sumps shall be piped to the front of the base for ease of maintenance. The drain valves shall be a ball valve with a fully retained and gasketed threaded cap.

g) The inlet filter shall be integral to the inlet silencer and shall include a washable and reusable polyester element for minimal pressure drop.

h) The inlet silencer shall be of the absorptive type, directly connected to the inlet port of the blower, and shall be mounted horizontally.

i) The discharge silencer shall be of the absorptive type with an integral pulsation dampener and directly connected to the outlet port of the blower. The discharge silencer shall be mounted horizontally and shall be integral to the base frame.

j) The relief valve shall be spring loaded and factory installed in a location to protect the blower from excessive differential pressures. The relief valve exhaust shall be piped out of the enclosure.

k) An elastomeric compensator/flex connector shall be provided for connection of the packaged blower to the system piping to reduce transmission of structure borne noise as well as prevent unacceptable loading of the silencer connection and blower casing.

l) A sound enclosure shall be provided. The sound enclosure shall be sheet steel construction with powder coat finish. It shall have acoustic foam insulation and shall provide sound attenuation of up to 20 dB(A). The enclosure shall have a hinged panel on top and a removable panel on the front of the package to allow maintenance access. Panels shall incorporate locking closures. An installed, integral ventilation fan, sized to provide adequate cooling of the package, shall be provided.

m) A pressure gauge shall be provided, pre-piped and panel mounted, on the sound enclosure.

n) A temperature gauge, with adjustable switching point and contact, shall be provided pre-piped and panel mounted on the sound enclosure.

o) A filter differential pressure gauge shall be provided pre-piped and panel mounted on the sound enclosure.

p) The blower package shall be designed to allow all preventive maintenance to be performed from the font of the package. All utility connections and process connections shall be at the rear of the package.

q) The blower package shall be capable of being installed directly adjacent to another blower packages of similar design and shall be capable of mounting next to the

wall without maintenance interference.

r) A pressure switch shall be provided on each blower discharge piping for controls specified in section 11702.

2.04 CONTROL PANEL

1. Blowers shall be controlled through the BESST Control Panel specified in section 11400.

2.05 FACTORY TESTING

1. All critical dimensions of the blower components actually provided by the manufacturer shall be verified and documented prior to assembly.

2. The rotating parts of each blower actually provided by the manufacturer shall be statically and dynamically balanced before final assembly. The blower alone shall operate without excessive vibration. Removal of material from the face of the rotors for balancing purposes is not allowed.

3. Each blower actually provided by the manufacturer shall be slip tested. The Slip RPM shall be documented. Each bare blower provided by the manufacturer shall be operated at its maximum rated speed and differential pressure for thirty (30) minutes. A document certifying that the supplied blowers conform to the design specifications shall be provided.

4. On completion of final assembly of the packaged blower and prior to shipment, each packaged blower shall be mechanically run for a minimum of fifteen (15) minutes.

2.06 QUALITY ASSURANCE

1. The blowers and equipment covered by this specification are intended to be standard blower equipment, of proven ability, as manufactured by a reputable CE certified manufacturer having at least two (2) years' experience in the production of such blowers. The blowers furnished shall be designed, constructed, and installed in accordance with the best practice and methods and shall operate satisfactorily when installed.

2. All equipment furnished under this specification shall be new, unused, and shall be the standard product of a manufacturer having a successful record of manufacturing and servicing the equipment and systems specified herein for a minimum of two (2) years.

2.07 WARRANTY

1. The manufacturer and contractor shall warrant the blower package being supplied to the owner against all defects in workmanship and materials for a period of twenty-four (24) months from date of acceptance by the regulatory agencies.

2. The manufacturer's warranty period shall run concurrently with the contractor's warranty period. No exception to this provision shall be allowed. The contractor shall be responsible for proper storage of the equipment so as to remain in "as shipped" condition. If the equipment remains in storage at the job site for longer than six (6) months before installation, the contractor shall provide factory service personnel for a complete inspection of the equipment. Any work necessary to restore the equipment to "as shipped" condition shall be the responsibility of the contractor.

PART 3 – EXECUTION

3.01 INSTALLATION

A. The Contractor shall install the blowers in accordance with the manufacturer's written instructions and as directed on site by the Manufacturer's representative. The Contractor shall be responsible for coordinating related items, not covered in this section of the specifications, such as piping, fittings, additional valves, supports, motor controls and wiring.

B. Blower shall not, under any conditions be allowed to sit out-of-doors unprotected. During actual installation of each unit, blower package shall be covered with a waterproof material in the event of any precipitation and also at all times that construction does not require exposure of the equipment. Covering shall be securely anchored.

C. Blower and motor alignment shall be performed by representatives of the blower manufacturer. Prior to initial starting of blower, a written report shall be supplied to the Engineer by the blower manufacturer's service representative verifying alignment and motor rotation direction of each unit and certify that the blower is properly installed.

D. The blower and accessories shall be installed, tested, adjusted, and installation certified by the blower supplier.

E. The blower supplier shall supply blower packages shipped completely pre-assembled. Only the electrical connections to the drive motor, pipe connections and anchoring in place shall be performed on site by the contractor.

3.02 FIELD TESTING

A. The manufacturer shall provide one (1) trip (one 8-hour day) to the project site for equipment installation assistance to the Contractor by a qualified factory authorized representative.

B. After installation of all equipment has been completed and as soon as conditions permit, the manufacturer shall provide one (1) trip (one 8-hour day) to conduct an acceptance test under actual operating conditions, to determine the operation is satisfactory and free from excessive vibration as defined by the blower manufacturer.

The test shall consist of 3 hours operation of each blower with readings taken and recorded at 30-minute intervals.

C. If required, Contractor shall make any changes, at his own expense, to the installation that may be necessary to assure satisfactory operation. Contractor shall be held liable for changes needed in the installation.

D. After the equipment has been placed into operation by the Owner for a minimum of forty-five (45) calendar days, the equipment manufacturer shall provide one (1) eight (8) hour day of equipment follow-up for equipment inspection and Owner review. This visit shall be coordinated with the Engineer.

BLOWER PERFORMANCE

TABLE 1

	Process Air/Air Lift	SHT/EQ	Tertiary Filter
1. Quantity of Blowers	2	2	1
2. Rated Inlet (ACFM)/Blower	148.0 cfm	74.0	160.0
3. Discharge Pressure Rise (psig)	20.7	20.70	21.70
4. Blower Package Inlet Pressure (psia)	14.70	14.70	14.70
5. Motor HP (Maximum)	10.0	5.0	10.0
6. Maximum Blower Speed (rpm)	5,125	3,490	5,125
7. Inlet Temperature	90°F	90°F	90°F
8. Ambient Relative Humidity (%)	80	80	80
9. Est. Free Field Noise @ 3 Ft. (dB)	69	72	69
10. Package	BB69C	BB52C	BB69C

END OF SECTION

PART 1 - GENERAL

1.01 DESCRIPTION

A. This Section of the Contract Documents covers the requirements for supplying all labor, materials, equipment, and services necessary to furnish and install a fully automatic dual biologically engineered single sludge treatment system (BESST) as it is specified herein and shown on the Contract Drawings. The system shall be as manufactured by Purestream, Inc. The system shall be complete, and without restricting the generality of the following, shall include the following:

1. One (1) equalization tank
2. Two (2) aeration zones;
3. One (1) anoxic zone;
4. Two (2) clarifiers;
5. One (1) sludge holding tank;
6. Accessories and miscellaneous appurtenant devices as specified herein;
7. Spare parts as specified herein.

The BESST plant shall be a welded structural grade ASTM-A36 steel rectangular tank structure divided into seven major sections: one anoxic compartment, two clarifiers, two aeration compartments, and a sludge storage tank. The equalization tank shall be provided separate from the BESST tank and constructed of structural grade ASTM-A36 steel.

The principal items of equipment in each unit shall include fine bubble air diffusers in the aeration tanks, coarse bubble air diffusers in the sludge storage tank, mixers, sludge airlift pumps, skimmer air lifts, effluent troughs, blower assemblies complete with necessary motors, necessary electrical controls and all necessary internal piping, valves, and accessory equipment as herein specified.

The treatment plant structure shall be reinforced to withstand normal pressures from the soil, and from the interior hydrostatic load.

B. The system shall be composed of sewage treatment equipment necessary to meet the effluent requirements of paragraph 1.05 herein, when treating raw domestic sewage having constituent concentrations equal to or less than that specified in paragraph 1.05.

C. Mechanical/Electrical start-up, and operations/maintenance training and process start-up training, as specified herein, shall be the responsibility of the sewage treatment equipment supplier (manufacturer) and shall be included in the manufacturer's proposal to the Contractor.

D. All equipment shall be installed by the Contractor as detailed on the drawings. All electrical work shall be as shown on the electrical drawings and be performed by the Contractor in accordance with Division 16 and all applicable codes.

E. The Contractor shall furnish one (1) complete set of Contract Documents, including addenda if any, to the equipment supplier. The equipment supplier shall certify on the shop drawing cover sheet that shop drawings have been prepared based on receipt of this information. The Engineer will not begin shop drawing review until said certification is provided.

1.02 QUALITY ASSURANCE

A. The sewage treatment system equipment specified herein shall be furnished by one single Supplier. The Supplier shall be responsible for the development, design, fabrication, assembly, delivery, and proper sustained operation of the system in order to meet the requirements of paragraph 1.05 but does not require that all equipment and accessories be the products of one single manufacturer.

B. Consideration will be given only to manufacturers who can demonstrate that their units comply with these Specifications of having had successful and documented experience of the size, quality, performance and reliability to that specified, and who have demonstrated this criterion to the Engineer. The Supplier shall furnish proof of successful operating experience for the proposed system during the last three (3) years on ten (10) installations for systems using the BESST system. Only manufacturers with at least two (2) successful installations in Westchester County, New York, will be allowed. The list shall contain the name of the facility, contact name, address, phone number, design flow, effluent parameters and years in operation.

C. The final system shall be designed and furnished to achieve the conditions of service specified in paragraph 1.05 of this Section.

D. The specifications have been prepared based on Biologically Engineered Single Sludge Treatment (BESST) system sewage treatment equipment as manufactured by Purestream. BESST equipment is to be used in the lump sum bid for the project. All bidders must provide their bid utilizing the BESST system pricing to be considered a responsive bidder. The bid shall be submitted to the Owner on the basis of named equipment in this specification without regard to “or equal”.

E. If Contractor elects, he may submit a deduct price for substitute equipment in his bid for process equipment. **The deduct price offered by the bidder for alternate process equipment shall include an allowance of $20,000 (Twenty Thousand dollars) for additional engineering required to review an alternate process, in addition where applicable, to engineering fees as**

specified in Section 01600-2-03-G if the alternate is selected and acceptable to the Owner.

F. If alternate equipment is proposed and acceptable to the Owner, the Supplier shall prepare and submit for review, the necessary structural, electrical, instrumentation, and mechanical drawings as required by the Engineer. The supplier shall prepare and submit for review along with the required drawings, a specific listing of the material, design and construction differences between the proposed equipment and the specified equipment. This material shall be submitted within two (2) weeks of the bid opening, if requested by the Engineer.

G. Bidders shall not use the price for substitute equipment in preparing the price bid in the Proposal for this project.

H. The Contractor shall remain fully responsible for design revisions, mechanical, structural, and electrical as a result of utilization of substitute equipment.

I. All work to revise the Contract Documents, in the event of substitution, shall be prepared under the responsible charge of (a) licensed New York Professional Engineer(s) with experience in design of sewage treatment facilities. Bidder shall submit with his information the name of and qualifications of the Engineer(s) selected by Bidder. It is understood that the Bidder's Engineer(s) will accept design responsibility for any and all alterations made.

J. A signed and sealed Basis of Design Engineer's Report shall be prepared for submission for substitute evaluation purposes if offered by Bidder and acceptable to the Owner.

K. All work associated with accommodating alternate equipment shall be at no additional cost, including engineering and legal fees, to the Owner even if the proposed substitution is subsequently rejected by the Owner, Engineer, or regulatory agencies.

1.03 WARRANTY

A. The **Supplier** shall provide a Warranty Certificate typed on company letterhead and signed by an authorized officer of the Supplier. The certificate shall be witnessed by a notary public in the state in which the company headquarters is located. The Warranty Certificate shall be submitted, verbatim and without exception, as follows:

B. Assuming the sewage treatment equipment will be operated in strict accordance with the written operating instructions provided by the sewage treatment equipment manufacturer (Purestream) and the influent parameters are equal to or less than that shown in paragraph 1.05 but will

provide a sufficient organic loading to maintain an active biological mass needed to ensure the effluent requirements are attained, the BESST process will meet the requirements of the SPDES Permit. The treatment equipment shall be capable of treating 45,000 gallons per day of raw sewage containing up to 240 mg/l BOD_5, 240 mg/l total suspended solids, 40 mg/L TKN and 18 mg/L total phosphorus. The Supplier shall guarantee that the following effluent requirements are consistently achieved:

BOD_5	Less than 5 mg/l
Suspended Solids	Less than 10 mg/l
Free Ammonia	Less than 1 mg/l

C. In addition, the Supplier shall guarantee all components of the system specified to be furnished by this Contract to be free from defects in design, materials, and workmanship for a period of two (2) years commencing from the date accepted by the regulatory agencies.

D. During the guarantee period, if any part or equipment component is defective or fails to perform when operating at design conditions and if the equipment has been installed and is being operated and maintained in accordance with the written instructions provided by the wastewater equipment system manufacturer, the Supplier shall repair or exchange such defective part(s) and arrange for installation with the construction contractor, at no cost to the Owner.

E. The replacement or repair of parts normally consumed in service shall include bulbs and lubrication. These parts only shall be considered as part of routine maintenance and upkeep and shall not be considered eligible for exchange free of charge under the Warranty.

F. Agreed upon this _____ day
(date)
by _____ of
(name of authorized agent)

_____, who,
(name of Supplier)
by signing this document, affirms he/she is legally authorized to submit this warranty on behalf of the Supplier.

1.04 DELIVERY, STORAGE AND HANDLING

A. All equipment shall be delivered directly to the site, the costs of which shall be the Supplier's responsibility.

B. All equipment deliveries shall be accompanied with a parts list listing the part description and its corresponding parts number. All parts shall be packaged and listed separately. The part number shall be written on the package, crate, or container.

C. All equipment and components shall be furnished as complete assemblies with all internal wiring, piping, valving, and control devices. Items shall be delivered as complete assemblies except where partial disassembly is required by transportation regulations and for protection of components.

D. All system equipment shall be blocked off the ground and suitably protected for outdoor storage by the Contractor. Provide tarping as necessary to protect components against the weather. All equipment shall be stored at location(s) acceptable to the Engineer. Prepare all equipment for short term storage as recommended by the particular equipment manufacturer.

E. The Supplier shall contact the Contractor at least two (2) weeks prior to the date the equipment is scheduled to be shipped.

F. Deliveries will not be accepted on weekends and state and federal holidays.

G. Do not use tape for marking part numbers.

H. The Supplier shall ship all equipment with installation instructions contained in a watertight, plastic, and zippered envelope.

I. The control panel(s) shall be crated and shipped with the approved schematic diagram. The diagram shall be stored inside the panel(s) in a pocket within the door, in a watertight, plastic and zippered envelope. The panel(s) shall be shipped in the locked position.

J. Spare parts shall be packaged in **one separate box**, **or crate** with the words "SPARE PARTS" printed on all sides of the container. The Contractor shall unpack this container in the presence of the Engineer.

1.05 PERFORMANCE AND DESIGN REQUIREMENTS

A. The sewage treatment equipment to be supplied under this Contract shall be designed to meet the following requirements:

1. BESST System Treatment

Capacity (Average Daily Flow)	45,000 gpd

2. BESST System treatment capacity (peak daily flow). . . . . 176,850 gpd

3. Influent Water Quality:

BOD5	240 mg/l
TSS	240 mg/l
TKN	40 mg/l

4. Required Effluent Quality:

BOD_5	less than 5 mg/l
Total Suspended solids	less than 10 mg/l
Settleable Solids	less than 0.1 ml/l
Ammonia	less than 0.9 mg/l (Summer) less than 1.8 mg/l (Winter)
Total Phosphorus*	less than 1.0 mg/l
Fecal Coliform	200 No./100 ml (30-day geometric Mean)
pH	6.5 - 8.5 SU

*The BESST system can achieve phosphorus removal to 3 mg/l, and an alum dosing system shall be provided at the STP for removal down to below 1 mg/L.

B. Plant Effluent Guarantee

1. The sewage equipment manufacturer shall guarantee, in writing, that the equipment supplied herein will consistently produce a plant effluent having the concentrations equal to or less than that specified in paragraph 1.05 (A) (4).

2. The "EFFLUENT GUARANTEE" shall be typed on company letterhead and signed by an authorized officer of the manufacturer. The guarantee shall be witnessed by a notary public in the state in which the company headquarters is located. "Performance and design requirements are to be met for the designed system operation under dual basin process train only. The system shall also be able to be operated as a single basin.

C. BESST Functional Requirement

1. The manufacturer of the BESST system shall be completely responsible for the proper design of their system, including but not limited to sewage treatment equipment, clarifiers, sludge pumps, and controls. All equipment shall perform as specified

and the completed installation shall operate in accordance with the requirements of the plans and specifications.

1.06 FIELD SERVICES

A. The Supplier shall provide the services of an experienced, authorized, and factory trained representative(s) of the sewage equipment manufacturer at the site of the Work to provide mechanical/electrical start-up, mechanical/electrical training, process start-up, process training and installation certification. The times specified below are exclusive of travel time to and from the sewage treatment plant site and do not relieve the Supplier from providing sufficient service to place the equipment in satisfactory operation and to obtain the specified performance. The following services are required as a minimum:

1. Services of a field representative to advice on the BESST field installation shall be provided. The services of the field representative shall include five (5) days, exclusive of travel time, and one (1) travel trip during the time that the equipment is being installed. The contractor shall notify the manufacturer a minimum of ten working days prior to the time that the field services are desired.

2. The contractor shall notify Purestream when the installation of the BESST equipment has been completed. A representative of the supplier shall inspect the installation. The Owner shall be advised in writing of any corrections or adjustments that are required for the BESST equipment installation. After the BESST installation has been completed to the supplier's satisfaction, a letter of certification that all equipment is installed in accordance with its instructions and that the BESST® equipment is ready for operation, shall be furnished.

3. Upon receipt of a letter from the Engineer certifying that the BESST installation is ready for start-up, the services of a field person for a total of six (6) days, and two (2) trips shall be provided. The field person shall do a functional check of each item furnished and start-up of the process. During this time, the field representative shall provide operation training, which shall include familiarization with the BESST process, its requirement and review of the Operation and Maintenance Manuals.

B. ALL UNUSED FIELD SERVICE DAYS SHALL BE CREDITED TO THE OWNER AT A RATE OF $750.00 PER DAY.

1.07 SUBMITTALS

A. The Supplier shall submit all information in package form in accordance with Section 01300 of these Specifications.

B. The information shall come complete from the Supplier and contain certification that the submittal is complete without exception. The information shall come in package form properly identified and referenced to each and every item required under this project. Do not submit information until all items are provided.

C. Submit the following items:

1. A technical specification for all proposed equipment. The specifications shall address how the proposed equipment meets or does not meet the specified unit. Highlight the specification in blue highlighting marker to point out where the proposed equipment differs from the specified unit.

2. Complete design calculations showing total power requirements, kinetic design, sludge production rates, sludge age, etc. sealed by a registered professional engineer.

3. Anchoring plan(s) for all wastewater treatment equipment showing dimensions, weights, anchor sizes and locations.

4. Individual catalog cuts and dimensional prints for all equipment, piping (hose), valves, operators, fittings, and miscellaneous devices and equipment.

5. Field wiring diagrams for all valve operators.

6. Field wiring diagram for all motors.

7. Field wiring diagram for liquid level controls.

8. Control panel(s) layout drawings for panel face and panel interior.

9. Schematic diagram for the control panel.

10. Catalog cuts of **ALL** electrical devices installed in the control panel such as breakers, starters, relays, controllers, blocks, transformer(s), clocks, timers, pilot lights, switches, selector switches, PLC, etc.

11. Nameplate and escutcheon plate schedule for the control panel devices.

12. Catalog cuts of painting system(s), if applicable.

13. Pump performance curves for all pumps specified herein. Include dimensional layout drawings, anchor locations and required pump clearance with rails. Submit curves showing duty point. Submit cuts of base elbow, rail brackets, rails and chain.

14. Spare parts list specified to be furnished under this section.

15. Warranty Certificate.

16. Delivery, storage and handling instructions.

17. Plant Effluent Guarantee.

18. Installation certification.

D. Submit **eight (8) copies** of a detailed operation and maintenance manual. All information shall be bound in a 3 arch-ring 8½" x 11" metal hinge, vinyl, large capacity binder by National or equal. The O&M Manual shall be properly indexed and chaptered and contain the following information:

1. **All approved shop drawings.**

2. Step-by-step troubleshooting guide.

3. Lubrication schedule.

4. Maintenance instructions and schedules.

5. The “Treatment Process” Chapter which shall generally include description of the process and theory of the BESST process. Include written description of the control panel functions. Provide description of each phase of treatment, sampling requirements for process control and detailed calculations necessary for process adjustments.

6. Spare parts list.

7. Step-by-step operating procedure for general process adjustments (air, waste sludge, etc.).

8. Complete listing of all equipment forming the system and a corresponding address and telephone number of the manufacturer or supplier of each particular piece of equipment.

9. All information contained in the O & M Manual which is larger than the 8½" x 11" format shall be folded and placed in a plastic

envelope and bound in the binder. The title of the information shall be visible.

1.10 SERVICE CONDITIONS

A. Provisions shall be made for lubrication, adjustment, or replacement of all parts. Corresponding parts of multiple units shall be interchangeable.

PART 2 – PRODUCTS

2.01 GENERAL

A. The performance and design requirements for the system are as specified in Part 1.

B. Materials

1. The equipment furnished shall be designed and constructed in accordance with the best practices and methods and for continuous service at maximum conditions. All parts shall be so designed and proportioned so as to have liberal strength, stability and stiffness and to be fully suitable for the intended conditions of service.

2. Provisions shall be made for easy lubrication, adjustment, or replacement of all parts. Except as otherwise specified, steel plates and shapes shall have a minimum thickness of 1/4 inch, sheet metal shall be 14 gauge minimum.

All welding shall be in accordance with the latest applicable codes of the American Welding Society. All materials used shall be new and of the best quality and fully suitable in every respect for the service intended.

After complete welding and fabrication of the tanks, all surfaces shall receive a SSPC-10 near white metal finish obtaining a 1.5 to 3.0 mil surface profile. Painting of the interior and exterior surface of the tanks shall be 16 to 20 mils D.F.T. of Tnemec 46H-413 Coal Tar Epoxy or equal, black in color and with finish of satin.

For cathodic protection, sixteen (16) packaged 17-lb magnesium anodes shall be provided in total. They shall be buried on opposite sides of the structures and shall be connected by means of heavy copper wires furnished with the anodes and solderless

connectors factory-installed on the plant structure. Installation of anodes are by the Contractor.

3. S.S. adhesive anchors and all S.S. mounting hardware, unless otherwise shown or specified, shall be furnished by the manufacturer and installed by the Contractor and shall be as shown on the shop drawings.

C. Nameplates

1. Stainless steel nameplates giving the name of the manufacturer and all pertinent design data and serial numbers shall be attached to each unit and each ancillary piece of equipment.

2. Refer to control panel paragraph for legend plate specifications.

2.02 INFLUENT EQUALIZATION TANK

A. An influent equalization tank shall be located outside of the sewage treatment plant to receive raw sewage and pump sewage to automatic bar screen, as shown on the contract drawings. There shall be two (2) raw sewage submersible equalization pumps to supply influent to distribution box. The tank shall be a separate part of the plant and have a design capacity of 15,051 gallons. The tank shall be provided with baffles where necessary to ensure circular flow without dead spots where sewage solids can accumulate and become septic.

B. Non-clog plastic coarse bubble diffusers shall be so spaced to ensure proper mixing in the tank and located at the bottom of the chamber. Diffused air shall be supplied by the equalization tank blower.

C. Two (2) pumps shall be supplied to pump the sewage into the constant head box at a controlled rate, and each pump shall have a capacity of 90 GPM at 15 feet total dynamic head. The pumps shall be Goulds Model 3887 at 0.5 HP, 230V, three phase, 60 Hz.

2.03 INFLUENT SCREENING DEVICE

A. One (1) automatic influent screening device shall be provided as specified in specification section 11330 and as shown on the Contract Drawings.

2.04 ANOXIC ZONE

A. One anoxic compartment shall be located at the inlet of the treatment plant, as shown on the Contract Drawings, and shall receive the equalized raw, screened sewage. The total volume of the compartment shall be a minimum of 7,434 gallons. Within the compartment, there shall be two (2) airlift pump, 4 inches in diameter, with the suction ends directly connected

to the bottom of each clarifier to facilitate the return of activated sludge to the anoxic zone as well as two (2) airlift pump, 2 inches in diameter with their suction end routed over the clarifier walls to facilitate the return of skimmings from the clarifiers to the anoxic zone. In addition, located at the bottom of the compartment, there shall be mixed liquor transfer pipes that will enable the liquid in the compartment to move, in a plug flow fashion, into the aeration compartments.

B. To ensure complete mixing at all times, there shall be two (2) explosion proof submerged mixers supplied well as one (1) shelf spare.

2.04 CLARIFIER

A. Two clarifiers shall be located as shown on the contract drawings. The clarifiers shall be of the self-regulating type relative to flow, with a minimum total surface area of 308.0 square feet, and a minimum total volume of 12,144 gallons (6,072 gallons each). The primary function of the clarifiers will be that of a sludge blanket clarifier separating the sludge floc from the clear, treated water.

On the aeration zone sides of the clarifiers' wall, and as shown on the contract drawings, there shall be an inlet structure to the clarifiers which will be of sufficient size to allow a stream of aerated wastewater to enter at the bottom of the clarifier cone where the sludge floc will begin to develop. Specific design of this inlet structure shall be as shown on the drawings.

At the clarifiers surface, and located as shown on the drawings, will be a baffled effluent trough with an adjustable galvanized steel weir plate. Effluent from this trough will flow by gravity to downstream process(es) as required.

The clarifiers shall be fabricated of structural grade steel.

2.05 GRATING

A. Grating panels shall be provided to cover the entire BESST plant and separate surge tank. The grating panels shall provide access to the plant equipment and offer safety protection for the system operator.

Grating panels shall consist of one piece steel plank, a maximum of 11 ¾" wide and 2" deep. Each panel shall be so supported as to have a safe uniform load carrying capacity of 120 lbs/sq. ft. at 5'-6" maximum unsupported length.

An anti-skid surface, designed for skid resistance in all directions, shall be provided by a series of shoe-gripping ridges and slots approximately 1/16"

high on the transverse tread ribs. Grating shall be manufactured from galvanized carbon steel sheets of commercial quality.

2.06 FASTENERS

A. Fasteners for mounting trough assembly as well as for weir plates shall be type 316 stainless steel.

2.07 AERATION ZONES

A. Two (2) aeration zones shall have a minimum total capacity of 26,295 gallons (13,147.50 gallons each), and will be complete with air header, diffuser drops with adjustable gas cocks, and fine bubble diffusers in sufficient quantity and placement to assure even distribution throughout the compartment. Each air diffuser shall be connected to the air header with a 1 1/4" Schedule 40 type galvanized steel drop pipe. The drop pipe shall be connected to the air header in a manner that will permit raising the drop pipe and diffusion device above the water surface quickly and without disturbing air flow to the other diffusers or requiring emptying of the compartment contents. The air diffusion device shall have an efficiency such that an adequate supply of oxygen is maintained in the aeration tank to treat the sewage load for which the plant is designed.

2.08 SLUDGE STORAGE TANK

A. A sludge storage tank shall be provided to hold wasted sludge prior to off-site disposal. The tank shall be integral to the main treatment plant and shall have a volume of 13,757 gallons. The tank shall have a supernatant return "T" pipe positioned to facilitate gravity flow of the returned supernatant to the anoxic zone of the treatment plant. A valve shall be provided on each "T" supernatant pipe for shut off purposes. The tank shall be aerated by non-clog plenum coarse bubble diffusers so spaced to ensure proper mixing of the tank contents and located parallel to and near the bottom of the chamber. Diffused air shall be supplied by the sludge storage tank blower. The tank shall be constructed of galvanized steel plate, suitably reinforced for its intended service.

A supernatant decant pump shall be located in the sludge storage tank as shown on the contract drawings. The pump shall be equipped with a slide rail system and a flexible hose to allow the pump to draw off liquid from various levels of the tank. The pump shall be a Goulds 3887 submersible pump capable of pumping 90 gallons per minute at 15 feet total dynamic head. The pump motor shall be 0.5 HP, 230V, three phase, 60 cycles.

One (1) high water level switch with mounting hooks shall be provided for sludge storage tank.

2.09 SUBMERGED MIXERS (ANOXIC ZONE)

A. To facilitate denitrification and to ensure complete conversion of nitrates, the manufacturer of the sewage treatment plant equipment shall furnish two (2) submersible mixers for installation in the anoxic zone of the sewage treatment plant and one (1) shelf spare for a total of three (3) submersible mixers. Each mixer by Sigma shall be equipped with an explosion proof 0.75 HP submersible electric motor, suitable for operation on 230 volt, three phase, 60 Hz service. The mixers will be provided with over temperature sensors.

B. Each mixer shall be of the direct-driven, close-coupled, submersible type, and all components of the mixer, including motor, shall be capable of continuous underwater operation. The motor and propeller shall operate at a speed of 828 RPM. The propeller and its protective shroud shall be constructed of stainless steel.

C. Mounting of the mixers shall be done with the use of a guide bar mounting assembly to facilitate its vertical adjustment within the tank, or removal from the tank when necessary. A winch device shall be provided for this purpose. A total of three (3) mixers shall be supplied, two installed and one as a common spare.

2.10 TERTIARY FILTER

A. One (1) tertiary filtration unit shall be furnished inside the STP control building as shown on the contract drawings and shall be a Purestream Model PST-31.5. The filter shall include the filter beds, clear well chamber, and backwash facilities. The unit shall be capable of treating secondary effluent at the design load referenced in this specification section.

The tertiary filter shall consist of a rectangular structure with all necessary baffles and partitions and all side walls, bottom, and partitions shall be of structural grade ¼” steel plate and all reinforcing and bracing shall have a minimum thickness of ¼”.

All welding shall be in accordance with the latest applicable codes of the American Welding Society. All materials used shall be new and of the best quality and fully suitable in every respect for the service intended.

B. The filtration system shall consist of two filter cells, each having a surface area of 15.75 sq. ft. and each being capable of treating 2 GPM/sq. ft. Each cell shall contain an air scour manifold and have a manually operated drain valve.

12” of filter sand under 20” of anthracite coal shall be provided in each filter bed . The filter sand shall have an effective size of 1.0 to 2.0 mm and a

uniform coefficient of less than 1.65. The anthracite coal shall have an effective size of 2.0 to 2.2 mm and a uniform coefficient of less than 1.65.

C. The filter under drain system shall consist of six lateral corrosion-resistant ABS “cycolac” type plastic under drains of the continuous slot, wire-wound design. The 0.02” inlet slots shall be formed to prevent clogging. Discharge from the under drains shall be by gravity through the backwash piping and pumps.

D. An integral clear well for storage of the filtered water for backwashing shall be provided with a minimum capacity of 2,520 gallons. The clear well shall contain the backwash pumps and filter discharge piping. A vertical riser shall be provided in the filter discharge piping to maintain a minimum of 2” of liquid over the surface of each filter bed. A clean out plug shall be provided in each discharge line, and a clear well overflow shall be included to maintain the required clear well volume and permit gravity discharge.

A post aeration diffuser drop with two (2) fine bubble diffusers shall be supplied in the clear well compartment and diffused air shall be provided by the tertiary filter blower.

E. The two (2) submersible backwash pumps provided in the filter shall be Goulds Model 3887 capable of pumping 145 GPM at 10 feet total dynamic head with a 0.75 HP, 230V, 60 Hz electric motor. Valves shall be provided in the pump discharge piping to allow either pump to backwash either filter bed. The discharge piping for the pumps shall be Schedule 40 steel pipe with malleable iron pipe fittings.

F. The integral backwash surge chamber shall be provided as shown on the contract drawings to provide storage for backwash water and incoming flow during backwash. The minimum volume of the chamber shall be 2,520 gallons. Two (2) backwash surge pumps shall be furnished and installed for returning backwash to the secondary treatment plant. Provision shall be made for recycling a portion of the discharge to reduce the rate of return to the secondary treatment plant.

The two (2) submersible backwash surge pumps shall be Goulds Model 3887 capable of pumping 36 GPM at 15 feet total dynamic head with a 0.33 HP, 230V, single phase, 60 Hz electric motor. The discharge piping for the pumps shall be Schedule 40 steel pipe with malleable iron pipe fittings.

G. A trough shall be provided as an extension of the inlet trough and shall contain a stop gate to permit a manual bypass of the filter beds for maintenance. An overflow trough shall be provided at the maximum water elevation in the backwash surge chamber to serve as a bypass in the event of a power failure results in plugging and overflow of the filter bed into the backwash surge chamber.

H. The air scour system consisting of airlines and air scour assemblies shall be furnished. Diffused air to scour to the surface of the sand during shall be supplied by an air line assembly which shall be easily removed from the filter. It shall be equipped with an air regulating valve permitting adjustment of the air flow or complete shut off. The air scour lines shall be perforated Schedule 40 PVC pipe and fittings and solenoid valves shall be provided in the air scour piping to each filter bed to allow the filter bed to be air scoured independently. Air shall be supplied on the basis of 4 cfm per square foot of filter beds.

2.10 PORTABLE HOIST

I. Three (3) portable hoists shall be provided to facilitate removal of the mixers, sludge decant pump, equalization pumps, backwash pumps, and backwash surge pumps from the tanks. The hoists shall be constructed of Type 316 stainless steel and include 30 feet of stainless-steel lifting cable with a safety hook and a hand winch. Each hoist shall have a maximum capacity of 1,000 pounds and be Model No. D8B36D, as manufactured by Halliday. Five (5) stainless steel hoist mounting sockets, one located at the mixers area, one at the area of the sludge decant pump, one at the equalization pumps, and two for the tertiary filter shall be bolted to the tank walls of the anoxic zone, sludge holding tank, equalization tank and tertiary filter, as indicated on the construction drawings.

2.11 ACCESS LADDER

A. A 45° access ships ladder shall be mounted to the tertiary filter as shown on the contract drawings. It shall consists of structural steel stair stringer channels joined by ¼" thick formed steel tread plate stair steps. The access ladder shall be hot dipped galvanized and galvanized steel handrails shall be furnished with the ladder. The ladder shall be shipped un-mounted and bolted in placed on the end of the tank by the Contractor.

2.12 BLOWERS

A. Refer to Specification Section 11372 Rotary Positive Displacement Blowers.

2.13 ELECTRICAL CONTROLS

A. BESST Control Panel:

1. Prewired NEMA 12 painted carbon steel enclosure PLC control panel complete with motor starters, circuit breakers, controls, and alternators. Also included shall be Four (4) manually controlled VFD units for use with the four (4) process/airlift, equalization and sludge holding tank blowers (the tertiary filter blower is not VFD controlled) along with five (5) pressure transducers for use with the process/airlift, equalization tank, sludge holding tank, tertiary

filter and spare blowers for low- and high-pressure monitoring. Transducers shall be shipped loose for installation by the installing contractor.

2. Alarm Dialer shall be provided on the wall as shown on the drawings: Alarm dialer shall be as specified in Section 10300.

3. Equipment listing - an entire bill of materials, as well as shop drawings for process control equipment to be used for the plant, may be found at the end of this section.

2.14 WELDING

A. All structural steel members shall be joined by electric arc welding, with fillets of adequate section for the joint involved. Where required for additional sectional strength, such welds shall be continuous inside and out.

2.15 DISSOLVED OXYGEN METER

A. A portable microprocessor based dissolved oxygen meter shall be provided for determining dissolved oxygen levels in the sewage treatment plant. It shall be equal to Oakton Model DO EW-35640-90 450 and include a waterproof floating housing, a DO meter kit and a foam lined hard carrying case.

2.16 SPARE PARTS AND EQUIPMENT

A. The supplier shall supply the following spare parts and equipment:

1. 15 pilot lights.

2. One (1) spare CMOS containing the program.

3. One (1) spare PLC input card for shelf storage.

4. One (1) spare PLC output cared for shelf storage.

5. One (1) set of spare parts which are recommended by the manufacturer for the mixer.

6. One (1) shelf spare anoxic mixer.

PART 3 – EXECUTION

3.01 INSTALLATION

A. All equipment and appurtenant devices shall be installed in strict accordance with the written instructions provided by the manufacturer. Verbal instructions provided by the field representative shall be confirmed in writing by the manufacturer and faxed to the Engineer within 24 hours of said instruction.

3.02 INSTALLATION CERTIFICATION

A. The manufacturer (through the Contractor) shall provide written certification that the equipment was installed properly.

END OF SECTION

PART 1 - GENERAL

1.01 DESCRIPTION

A. All work covered by this section includes all labor, equipment and material necessary to furnish and install laboratory furniture, testing apparatus and supplies as specified.

1.02 QUALITY ASSURANCE

A. Laboratory furniture shall be manufactured by Fisher Hamilton Scientific Inc.

B. Laboratory equipment apparatus and chemicals shall be manufactured by HACH Co. unless otherwise specified.

1.03 WARRANTY

A. The supplier shall provide a warranty certificate typed on company letterhead and signed by an authorized officer of the supplier. The certificate shall be witnessed by a notary public in the state in which the company headquarters is located.

B. The supplier shall guarantee the lab furniture specified to be furnished by this Section to be free from defects in design, materials, and workmanship for a period of one (1) year commencing on the date the system was placed in permanent and consistent operation but not to exceed 18 months from date of delivery.

C. During the guarantee period if any part is found to be defective or fails to perform and if the unit has been installed and is being operated and maintained in accordance with the written instructions provided by the Supplier, the Contractor shall repair or exchange such defective part(s) free of any and all charges. The costs of labor and all other expenses resulting from the repair or replacement of the defective part(s) and from installation of part(s) furnished by this warranty shall be borne solely by the Contractor.

1.04 SUBMITTALS

A. All submittals shall comply with the requirements contained in Section 01300.

B. The following submittals are required:

1. Shop scaled plan and section drawings of unit, and all pipe connections detailed within the drawings.

2. Fabrication drawing of the unit.

3. Warranty Certificate.

1.05 DELIVERY STORAGE AND HANDLING

A. The units shall be shipped and stored and handled in accordance with the written instructions supplied by the Manufacturer.

PART 2 – PRODUCTS

2.01 LABORATORY FURNITURE

A. Provide Combination Emergency shower and eyewash by Bradley model No. S19-310AC or approved equal.

2.02 LABORATORY EQUIPMENT, APARATUS AND CHEMICALS

A. Equipment

1. One (1) portable DR 900 color meter by HACH Co. with accessories for analysis of:

Amonia Nitrogen	0-50 mg/l
Nitrate Nitrogen	0-30 mg/l
Nitrite Nitrogen	0-0.35 mg/l

Provide all required chemicals for 100 tests.

2. Provide one (1) stereo binocular microscope boom by AmScope Model No. SE400-XYZ with 10X, 15X and 20X eye pieces, boom stand, gooseneck LED light, and dust cover and provide five (5) AmScope PP-95 reversible stage plates.

3. One (1) HQ40D Portable Multi Meter by HACH Co. HACH catalog No. HQ40D53000000 with accessories:

Field D.O. Probe HACH catalog No. LDO10105
pH probe, HACH catalog No. PHC20101

4. One (1) portable Royce Aqua 22 MLSS meter by Royce Water Technologies.

5. One (1) Sludge Judge HACH catalog No. 2506102.

6. One (1) 600 Amp Digital Clamp Meter, Klein Tools Model CL600.

7. One (1) Pocket Pro+ Multi 2 Tester for pH/conductivity/TDS/salinity HACH catalog number 9532800

B. APPARATUS	HACH CATALOG NO.	QTY.REQUIRED
1. Plastic Wash Bottle 1000 m1	620-16	1
2. Beaker, Polypropylene 600 m1	1080-52	2
3. Beaker, Polypropylene 250 m1	1080-46	2
4. Graduated cylinder, Polypropylene 10 ml	1081-38	1
5. Graduated cylinder, Polypropylene 50 m1	1081-41	1
6. Graduated cylinder, Polypropylene 100 m1	1081-42	1
7. Brush cylinder	687-00	2
8. Funnel	1083-70	2
9. 6’ Sampler	2929302	1
10. Settleometer Kit	2115700	2
11. Chlorine Test Kit Model CN-66T	223103	1
12. Safety Goggles	2927902	1
13. Ammonia Test Kit	224100	1
14. Alkalinity Test Kit	2444301	1
15. Buffer Solution Kit	2507200	1
C. CHEMICALS		
1. Deionized water	272-53	2
2. Nitrogen Nitrate Std. Sol.	307-49	1

3. Alconox Cleaning Agent	2088000	1

PART 3 - EXECUTION

3.01 INSTALLATION

A. Assemble in place all laboratory furniture in accordance with manufacturer's instructions. Mount cabinets at recommended height. Pipe sink as required with hot and cold water and pipe 4" diameter trapped drain to influent pumping station above high-water level. Hot water heater shall be 50-gallon electrical unit, installed at the location shown on the drawing.

B. Wax all exposed cabinet faces, wash and clean interior of drawers and cabinets.

3.02 EQUIPMENT, APPARATUS AND CHEMICALS FURNISHED

A. Hand over all equipment, apparatus and chemicals with necessary manuals, MSDS to Owner's representative.

B. Provide the services of a qualified equipment manufacturers representative to unpack, set-up, calibrate and test all equipment. Manufacturer's representative should also train treatment plant operator in use of all test equipment.

END OF SECTION

PART 1 - GENERAL

1.01 CONTRACT DOCUMENTS

A. All work of this section shall comply with the requirements of the conditions of the Contract, with all sections of the Specifications and with the Drawings and all other Contract Documents.

1.02 WORK INCLUDED

A. Provide all tools and miscellaneous supplies as supplies as specified herein.

PART 2 - PRODUCTS

2.01 TOOLS AND MISCELLANEOUS SUPPLIES

A. Furnish the following tools and supplies.

1.	Screw Drivers – Shock Proof Handles set 6 – assorted sizes	1
2.	Broom – street, ordinary, industrial type	1
3.	Purell Instant Antiseptic hand cleanser with refill Packed Model 7BC-83786 and 7BC-83784 as distributed by Lab Safety	1
4.	Chemical Resistant face shield Model 7A-6635 as Distributed by Labs Safety	1
5.	Paper Tower Dispenser	1
6.	Case of paper towels for dispenser	1
7.	Dust pan	1
8.	Trash can – large	
9.	Extension Light – Graybar Cat. 88072027	
10.	Manhole hook (30" long)	1
11.	Plastic garbage bags with ties	50

12.	Electric extension cord 25 feet (heavy duty - 14/3 AWG.)	2
13.	Toilet paper dispenser with 12 rolls of toilet paper	1
14.	Valve Key (6' long)	1

2.02 FIRST AID CABINET

A. The Contractor shall supply one (1) first aid cabinet with supplies for light industrial use as manufactured by Johnson and Johnson and supplied by Lab Safety Supplies (1-800-356-0783). First aid set shall be Model No. 7BC-52592. The first aid cabinet shall be mounted on the laboratory wall at the location directed by the Engineer.

END OF SECTION

PART 1 - GENERAL

1.01 DESCRIPTION

A. Work of this Section includes the furnishing of all labor, materials, equipment and services necessary to install flow instrumentation as specified herein and shown on the Drawings.

B. The unit shall be factory set for weir flow as shown on the Drawings.

1.02 QUALITY ASSURANCE

A. The equipment covered by these Specifications is intended to be standard equipment of proven ability as manufactured by reputable concerns. Equipment shall be designed, constructed and installed in accordance with the best practice of the trade, and shall operate satisfactorily when installed as shown on the Contract Drawings.

B. The Contractor's instrumentation supplier shall show satisfactory evidence that he maintains a fully equipped factory organization capable of furnishing adequate service of the equipment furnished, including replacement parts. The supplier shall be prepared to offer a service contract to the owner for the maintenance of the system after the warranty period expires.

C. The unit shall be manufactured by Milltronics.

1.03 WARRANTY

A. The Supplier shall provide a Warranty Certificate typed on the company letterhead and signed by an authorized officer of the Supplier. The certificate shall be witnessed by a notary public in the state in which the company headquarters is located.

B. The Supplier shall guarantee all components of the instrumentation equipment specified to be furnished by this section to be free from defects in design, materials and workmanship for a period of two (2) year commencing on the date of acceptance by the regulatory agencies.

C. During the guarantee period, if any part or equipment component is defective or fails to perform when operating at design conditions and if the equipment has been installed and is being operated and maintained in accordance with the written instructions provided by the Supplier, the Supplier shall repair or exchange such defective part(s) free of any and all charges. The cost of labor and all other expenses resulting from the repair or replacement of the defective part(s) and from installation of part(s) furnished by this Warranty shall be borne solely by the Supplier.

D. The replacement or repair of parts normally consumed in service shall include charts, ink, and light bulbs. These parts only shall be considered as part of routine maintenance and upkeep and shall not be considered eligible for exchange free of charge under the Warranty.

1.04 SUBMITTALS

A. Submit all information in accordance with Section 01300.

B. The Contractor shall submit copies of the manufacturer's warranty.

C. Submit Catalog cuts, equipment specifications and dimensional drawings.

D. List of spare parts

1.05 DELIVERY, STORAGE AND HANDLING

A. All instrumentation equipment which the Contractor elects to store on the site, shall be stored in a dry, heated enclosure, and not subject to adverse weather conditions or flooding, in a manner as directed by the instrumentation supplier and approved by the Engineer. No equipment shall be delivered to the site until provisions have been made to store and protect it properly.

B. All materials which are subject to damage from dampness shall be stored upon raised platforms at least 6" off floor or grade. All waste materials and debris shall be disposed of immediately.

C. The Contractor shall, in accordance with the instrumentation supplier's recommendations, take special care in the protection of all components. Protection of said equipment shall be continuous until the time the equipment is placed into permanent service.

1.06 FIELD SERVICES

A. The instrumentation supplier shall provide the services of an experienced, authorized and factory trained representative at the site of the Work to provide calibration, start-up, systems testing and operations and maintenance training. The times specified below shall not relieve the supplier from placing the systems in trouble and fault free operation

B. The Supplier shall include two (2) non-consecutive days in the bid price, dates to be selected by the Engineer.

PART 2 - PRODUCTS

2.01 ULTRASONIC MULTI-PURPOSE LEVEL CONTROLLER

A. The multi-purpose level transmitter system shall be a microprocessor-based echo-time measuring type providing an electronic output signal proportional to the level of material, space, volume, flow or differential as may be required. It shall consist of a transmitter and one or two transducers connected by up to 1200 feet of cable.

B. Transducer:

1. Operating principle: Acoustic impulses emitted from an ultrasonic transducer are reflected back from the material surface and are received by the transducer.

   The transit time of pulse travel from generation to echo is measured. The elapsed time is proportional to the distance between the transducer face and material surface.

2. Primary Sensor: The acoustic transducer shall contain a polarized Zirconium crystal with acoustic impedance matching face and transformer.

   a. The range of the transducer shall be a minimum of 1 to 50 feet

   b. Transducer housing shall be Kynar

   c. Process connection shall be 1” NPT

   d. Operating temperature shall be -40^{o} to 203^{o}F

C. Transmitter:

1. Enclosure shall be NEMA 4X polycarbonate

2. Power supply shall be 100 - 230 VAC +/- 15% @ 50/60 Hz

3. Power consumption shall be 36 VA

4. Operating temperature shall be -5º to 122º F. Internally mounted heater and thermostat assemblies shall be enclosed at temperatures below -5º F.

5. Outputs:

   a. 4-20ma/20-4ma/0-20ma/20-0ma into 750 ohms.

   b. 6 relays, 4 Form A & 2 Form C, rated at 5A @ 250 VAC, non-inductive

6. Inputs

   a. One (1) 4 – 20 or 0 – 20 mA from an alternate device, scaleable

   b. Two (2) discrete 10 – 50 switching level

7. Control and Programming

   a. Unit shall be capable of entering all parameter via the following methods:

      ii) Hand held infrared keypad
      iii) Dolphin Plus PC based software

   b. All programming shall be achievable without opening enclosure once field installation is completed.

8. Communications

   a. Transceiver shall be capable of communications to customer's devices via each of the following methods:

      i) RS-232 running Modbus RTU or ASCII via RJ-11 connector
      ii) RS-485 running Modbus RTU or ASCII via terminal blocks
      iii) Optional RS-485 External Modem kit

iv) Smart linx interface to Allen-Bradley RIO, Profibus DP, and Device net

9. Transmitter shall process all echoes from stored memory that is continually updated after echo enhancement.

10. The echoes shall be processed comparing returns for largest echo and first echo returned. The patented Sonic Intelligence shall compare the various returns and select the echo with the greatest confidence factor.

D. Transducer Performance

1. Range shall be 1 - 50 feet (depending on transducer used)

2. Accuracy shall be +/- 0.25% of range or 6 mm, whichever is greater.

3. Resolution shall be 0.1% of program range or 2 mm, whichever is greater

4. Maximum separation between transmitter and transducer shall be 1200 feet

5. FM approved for Class I, Div. 2, Groups C & D Class II, Div. 2, Groups E, F, & G

6. Shall accept submersible shield

E. Indication

1. Display shall be a multi-field back lit LCD

2. Individual alarm status lights on LCD display

F. Equipment

The multi-purpose level controller shall be a Siemens-Milltronics HydroRanger with an Echomax™ XRS-5, XPS-10 or XPS-15 transducer and chart recorder or approved equal.

G. Operator Functions

1. Calibration

a. Calibration of the multi-purpose level controller shall be accomplished by the entry of all operating data through the removable keypad via infrared link or Dolphin Plus PC based software. No other equipment shall be required.

b. Internal self-diagnostics shall be available to assist in maintenance of the multi-purpose level controller.

2. Transmitter Function Details

The following functions shall be provided:

a. The controller shall provide an isolated 4-20ma or 0-20ma (or reversed) signal proportional to space, material, volume, flow or differential into a maximum of 750 ohms.

b. The controller shall be capable of reading the differential, head or level as outlined in the instrumentation schedule.

c. The transducer shall be permanently mounted at the measuring site and shall be installed in accordance with the manufacturer's recommendations.

d. The transducer shall transmit and receive an acoustic signal to accurately measure material flow and level.

e. The output shall be proportional to level, flow rate or volume from 0 to 100 % with a resolution of 0.1%.

f. Operational range shall be adjustable by entering new data via infrared keypad.

g. The controller shall be capable of zero to full scale simulation to assure proper operation with regards to flow charts or pump control parameters.

h. There shall be no internal potentiometers or switches used in programming or adjusting the transmitter.

i. The power to operate the transducers shall come solely from the transmitter over the signal interconnection cable.

j. The 6 alarm relays shall be programmable for level, rate of change of level, differential level, time sampling, volume sampling, pump control, loss of echo or temperature.

k. The controller shall have an EEPROM memory and shall not require a battery to ensure protection of stored data.

PART 3 – EXECUTION

3.01 INSTALLATION

A. Follow manufacturer's recommendation for the minimum separation between the transducer face and the maximum expected material level.

B. Mount the transducer to ensure a clear path to the material surface.

C. Additional transducer cable and mA output signal cable shall have 2 – 3 copper conductors, twisted with shield and drain wire.

D. Wiring between the transmitter and the transducer shall be routed through grounded metal conduit.

E. The manufacturer shall calibrate the unit within seven (7) days of Contractor's request.

END OF SECTION

PART 1 - GENERAL

1.01 CONTRACT DOCUMENTS

A. All work of this section shall comply with the requirements of the conditions of the Contract, with all sections of the Specification and with the Drawings and all other Contract Documents.

1.02 SUMMARY

A. This Section includes general administrative and procedural requirements for mechanical installations. The following administrative and procedural requirements are included in this Section to expand the requirements specified in Division 1:

1. Submittals.
2. Coordination drawings.
3. Record documents.
4. Maintenance manuals.
5. Rough-ins.
6. Mechanical installations.
7. Cutting and patching.

1.03 SUBMITTALS

A. General: Follow the procedures specified in Section 01300.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Deliver products to the project properly identified with names, model numbers, types, grades, compliance labels, and other information needed for identification.

PART 2 - PRODUCTS
(NOT UTILIZED)

PART 3 - EXECUTION

3.01 ROUGH-IN:

A. Verify final locations for rough-ins with field measurements and with the requirements of the actual equipment and piping to be connected.

B. Refer to equipment specifications and the Contract Drawings for rough-in requirements.

3.02 MECHANICAL INSTALLATIONS

A. General: Sequence, coordinate, and integrate the various elements of mechanical systems, materials, and equipment. Comply with the following requirements:

1. Coordinate mechanical systems, equipment, and materials installation with wastewater treatment components.

2. Verify all dimensions by field measurements.

3. Construct required openings in tankage during progress of construction.

4. Coordinate the installation of required supporting devices and sleeves to be set in concrete and other structural components, as they are constructed.

5. Sequence, coordinate, and integrate installations of mechanical materials and equipment for efficient flow of the Work. Give particular attention to large equipment requiring positioning inside the process tankage.

6. Where mounting heights are not detailed or dimensioned, install systems, materials, and equipment to provide the maximum headroom possible or as directed by the Engineer.

7. Coordinate connection of mechanical systems with exterior underground piping and services. Provide required connection for each service.

8. Install systems, materials, and equipment to conform with approved submittal data, including coordination drawings, to greatest extent possible. Conform to arrangements indicated by the Contract Documents, recognizing that portions of the Work are shown only in diagrammatic form. Where coordination requirements conflict with individual system requirements, refer conflict to the Engineer.

9. Install systems, materials, and equipment level and plumb, parallel and perpendicular to other systems and components, where installed exposed in finished spaces.

10. Install mechanical equipment to facilitate servicing, maintenance, and repair or replacement of equipment components. As much as practical, connect equipment for ease of disconnecting, with minimum of interference with other installations. Extend grease fittings to an accessible location.

11. Install piping systems, giving right-of-way priority to piping required to be installed at a specified slope.

3.03 CUTTING AND PATCHING

A. General: Perform cutting and patching so as to protect adjacent work.

B. Perform cutting, fitting, and patching of mechanical equipment and materials required to:

1. Uncover Work to provide for installation of ill-timed Work.

2. Remove and replace defective Work.

3. Remove and replace Work not conforming to requirements of the Contract Documents.

4. Remove samples of installed Work as specified for testing.

5. Install equipment and materials in existing structures.

6. Upon written instructions from the Engineer, uncover and restore Work to provide for Engineer observation of concealed Work.

END OF SECTION

PART 1 - GENERAL

1.01 CONTRACT DOCUMENTS

A. All work of this section shall comply with the requirements of the conditions of the Contract, with all sections of the Specification and with the Drawings and all other Contract Documents.

1.02 SUMMARY

A. This Section specifies piping materials and installation methods common to more than one section of Division 15 and includes joining materials, piping specialties, and basic piping installation instructions.

B. Related Work Specified Elsewhere Includes:

Pipe and Pipe Fittings Underground	02610
Underground Non-Pressure Piping	02705
Underground Pressure Piping	02706
Pipe and Pipe Fittings - Exposed	15060
Piping Specialties	15080
Valves	15100
Supports and Anchors	15140

C. All pipes must be manufactured in USA unless otherwise approved by the regulatory agencies.

1.03 SUBMITTALS

A. Refer to Section 01300 for administrative and procedural requirements for submittals.

B. Submit product data on the following items:

1. Mechanical Sleeve Seals

C. Submit welders' certificates specified in Quality Assurance below.

1.04 QUALITY ASSURANCE:

A. Welder's Qualifications: All welders shall be qualified in accordance with ASME Boiler and Pressure Vessel Code, Section IX, Welding and Brazing Qualifications.

B. Welding procedures and testing shall comply with ANSI Standard B31.1.0 - Standard Code for Pressure Piping, Power Piping, and The American Welding Society, Welding Handbook.

C. Soldering and Brazing procedures shall conform to ANSI B9.1 Standard Safety Code for Mechanical Refrigeration.

1.05 DELIVERY, STORAGE, AND HANDLING:

A. Provide factory-applied plastic end-caps on each length of pipe and tube, except for hub-and-spigot. Maintain end-caps through shipping, storage and handling to prevent pipe-end damage and prevent entrance of dirt, debris, and moisture.

B. Protect stored pipes and tubes. Elevate above grade and enclose with durable, waterproof wrapping. When stored inside, do not exceed structural capacity of the floor.

C. Protect flanges, fittings, and specialties from moisture and dirt by inside storage and enclosure, or by packaging with durable, waterproof wrapping.

PART 2 - PRODUCTS

2.01 MANUFACTURERS:

A. Manufacturer uniformity: Conform with the requirements specified in Section 01600.

B. Manufacturer: Subject to compliance with requirements, provide piping materials and specialties from one of the following:

1. Mechanical Sleeve Seals:

a. Link Seal or equal.

2.02 PIPE AND FITTINGS:

A. Refer to the individual piping system specification sections in Division 15 for specifications on piping and fittings relative to that particular system.

2.03 JOINING MATERIALS:

A. Welding Materials: Comply with Section II, Part C, ASME Boiler and Pressure Vessel Code for welding materials appropriate for the wall thickness and chemical analysis of the pipe being welded.

B. Brazing Materials: Comply with SFA-5.8, Section II, ASME Boiler and Pressure Vessel Code for brazing filler metal materials appropriate for the materials being joined.

C. Soldering Materials: Refer to individual piping system specifications for solder appropriate for each respective system.

D. Gaskets for Flanged Joints: Gasket material shall be full-faced for cast-iron flanges and raised-face for steel flanges. Select materials to suit the service of the piping system in which installed, and which conform to their respective ANSI Standard (A21.11, B16.20, or B16.21). Provide materials that will not be detrimentally affected by the chemical and thermal conditions of the fluid being carried.

2.04 PIPING SPECIALTIES:

A. Unions: Malleable-iron, Class 150 for low pressure service and class 250 for high pressure service; hexagonal stock, with ball-and-socket joints, metal-to-metal bronze seating surfaces; female threaded ends.

B. Sleeves:

1. Steel Sleeves: Schedule 40 galvanized, welded steel pipe, ASTM A53, Grade A.

C. Mechanical Sleeve Seals: Modular mechanical type, consisting of interlocking synthetic rubber links shaped to continuously fill annular space between pipe and sleeve, connected with bolts and pressure plates which cause rubber sealing elements to expand when tightened, providing watertight seal and electrical insulation

PART 3 - EXECUTION

3.01 PREPARATION:

A. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.

B. Remove scale, slag, dirt, and debris for both inside and outside of piping and fittings before assembly.

3.02 INSTALLATIONS:

A. General Locations and Arrangements: Drawings (plans, schematics, and diagrams) indicate the general location and arrangement of the piping systems. Location and arrangement of piping layout take into

consideration pipe sizing and friction loss, expansion, pump sizing, and other design considerations. So far as practical, install piping as indicated. Refer to individual system specifications for requirements for shop drawing submittals.

B. Install piping free of sags or bends and with ample space between piping to permit proper insulation applications.

C. Install exposed piping at right angles or parallel to walls. Diagonal runs are not permitted, unless expressly indicated on the Drawings.

D. Install piping tight to slabs, walls, and other permanent elements of the tankage.

E. Locate groups of pipes parallel to each other, spaced to permit servicing of valves.

F. Wall Penetrations: Seal pipe penetrations through walls using sleeves and mechanical sleeve seals.

3.03 FITTINGS AND SPECIALTIES:

A. Use fittings for all changes in direction and all branch connections.

B. Remake leaking joints using new materials.

C. Install unions adjacent to each valve, and at the final connection to each piece of equipment and plumbing fixture having 2" and smaller connections, and elsewhere as indicated.

D. Install Flanges in piping 2-1/2" and larger, or where indicated, adjacent to each valve, and at the final connection to each piece of equipment.

3.04 JOINTS:

A. Steel Pipe Joints:

1. Pipe 2" and Smaller: Thread pipe with tapered pipe threads in accordance with ANSI B2.1. Cut threads full and clean using sharp dies. Ream threaded ends to remove burrs and restore full inside diameter. Apply pipe joint lubricant or sealant suitable for the service for which the pipe is intended on the male threads at each joint and tighten joint to leave not more than 3 threads exposed.

2. Pipe Larger Than 2":

a. Weld pipe joints (except for exterior water service pipe) in accordance with ASME Code for Pressure Piping, B31.

b. Install flanges on all valves, apparatus, and equipment. Weld pipe flanges to pipe ends in accordance with ASME B31.1.0 Code for Pressure Piping. Clean flange faces and install gaskets. Tighten bolts to torque specified by manufacturer of flange and flange bolts, to provide uniform compression of gaskets.

B. Non-ferrous Pipe Joints:

1. Brazed And Soldered Joints: For copper tube and fitting joints, braze joints in accordance with ANSI B31.1.0 - Standard Code for Pressure Piping, Power Piping and ANSI B9.1 - Standard Safety Code for Mechanical Refrigeration.

2. Thoroughly clean tube surface and inside surface of the cup of the fittings, using very fine emory cloth, prior to making soldered or brazed joints. Wipe tube and fittings clean and apply flux. Flux shall not be used as the sole means for cleaning tube and fitting surfaces.

C. Joints for other piping materials are specified within the respective piping system sections.

3.05 FIELD QUALITY CONTROL:

A. Testing: Refer to individual piping system specification sections.

END OF SECTION

NO TEXT
THIS PAGE WAS INTENTIONALLY LEFT BLANK

PART 1 - GENERAL

1.01 DESCRIPTION

A. This Section includes the material and installation requirements for interior and exposed process and chemical system piping.

B. Refer to other Division 15 Sections for related piping requirements for small diameter water distribution systems.

C. Refer to Division 2 Sections for pipe and pipe fitting material and installation requirements for underground pipe.

1.02 QUALITY ASSURANCE

A. Pipe and pipe fittings shall be produced in a plant of recognized reputation that is regularly engaged in the production of pipe conforming to the specified standards. Pipe and pipe fittings of the same type shall be the product of a single manufacturer.

B. Pipe manufacturer shall be a member of:

1. Ductile Iron - Ductile Iron Pipe Research Association

2. PVC Pipe - Uni-Bell Plastic Piping Association

3. Steel - Steel Pipe Fabricators Association

C. Acceptable manufacturers of pipe and pipe accessories shall be:

1. Ductile Iron -U.S. Pipe and Foundry Company, American Cast Iron Pipe Company, Clow Corporation, or equal.

2. PVC Pipe - Certain-Teed Products Corporation, Johns-Manville, IDEX, Inc., or equal.

3. Steel - U.S. Steel, Armco or equal.

4. Stainless Steel - All Stainless, Inc., Rath Manufacturing Co., Jonesville, WI or equal.

5. All pipes must be manufactured in USA unless otherwise approved by WCDH.

1.03 SOURCE QUALITY CONTROL

A. General - The manufacturers shall test and furnish certificates covering pipe and fittings supplied under this Section. Select test samples from the run of pipe proposed to be furnished to the Project. Unless Engineer elects to witness such testing, the manufacturer shall select the samples for testing. Advise Engineer at least two (2) weeks in advance of the time and location of the testing.

B. Factory Tests - Pipe shall be tested as follows:

1. Ductile Iron Pipe

Test	In Accordance With
Hydrostatic Test	AWWA C151
Tensile Test	AWWA C151
Impact Test	AWWA C151
Low Temperature Impact Test	AWWA C151

2. Polyvinyl Chloride Pipe - Schedule 40, 80, 120(ASTM D1785)

Test	In Accordance With
Sustained Pressure Test	ASTM D1785, D1598
Quick Burst Test	ASTM D1785, D1599
Dimensions and Tolerances	ASTM D1785, D2122
Eccentricity	ASTM D1785
Flattening Immersion Test	ASTM D1785, D2152
Acetone Immersion Test	ASTM D1785, D2152

3. Steel Pipe - Carbon Steel (ASTM A53, AWWA C200)

Test	In Accordance With
Hydrostatic Test	AWWA C200
Weld Test	AWWA C200
Chemical Analysis	ASTM A53, A370
Tensile Test	ASTM A53, A370
Bending Test	ASTM A53, A370
Flattening Test	ASTM A53, A370

C. Additional Testing - In addition to the tests required above, Owner may perform additional testing on pipe delivered to the Project site.

1.04 SUBMITTALS

A. See Section 01300.

B. Brochures containing sizes, dimensions, specifications and technical data, coating information, etc. as well as complete information and instructions pertaining to the storage, handling, installation and inspection of pipe, fittings and joints furnished.

C. Test certificates for the manufacturers' tests required under Paragraph 1.03.

D. Pipe manufacturers' Certificates of Compliance on pipe, with each lot of pipe supplied. Immediately turn certificates over to Engineer. Materials delivered to the site without accompanying certificates will be subject to rejection.

E. Contractor shall prepare and submit a pipe schedule for all pipe to be used for this Project.

1.05 DELIVERY, STORAGE AND HANDLING

A. Each length of pipe delivered to the site shall be clearly marked with the name of the manufacturer, class of pipe and pipe diameter. Store in accordance with manufacturer's approved instructions.

B. Carefully handle all pipes and fittings when loading and unloading. Lift pipes and fittings by hoists or lower on skid-ways in a manner to avoid shock. Lower pipe into trench with derricks, rope or other suitable equipment.

C. Do not dump or drop pipe and fittings. Those that are dumped or dropped are subject to rejection by Engineer.

D. Store PVC pipe under canvas or other opaque material which will allow air circulation but will eliminate the direct rays from the sun.

E. Comply with all other recommendations of the manufacturers.

1.06 JOB CONDITIONS

A. The Drawings indicate the required pipe sizes and general arrangement of piping and equipment. Verify locations in the field and immediately notify Engineer of any discrepancies or conflicts.

B. Approval of the Engineer is required prior to changing the locations of any of the Work due to field conditions. Changes in pipe sizes are prohibited without a written consent from Engineer.

C. Determine the locations and character of all inserts for hangers, chases, sleeves and other openings in the construction required for the piping work. Obtain this information well in advance of the construction progress so as not to delay the Work. Coordinate final locations of all built-in items with work of other trades to prevent interferences.

D. Installed piping shall form completely connected systems, ready for operation, including connections to valves, equipment, and appurtenances specified in other Sections. Do not install work that connects to equipment until complete Shop Drawings of such equipment have been approved by Engineer. Any work installed prior to approval of Shop Drawings shall be at Contractor's risk.

PART 2 - PRODUCTS

2.01 DUCTILE IRON PIPE AND FITTINGS (EXPOSED)

A. Pipe shall be centrifugally cast with primary graphite in Modular or spherulitic form. Pipe shall be 60-42-10 grade with matrix predominately ferrite and shall conform to AWWA C151 and Federal Specification WW-P-421D with thickness Class 53.

B. Pipe weight shall not vary more than 5 percent for pipe greater than 12 inches in diameter and 6 percent for pipe 12 inches in diameter and smaller. Each length of pipe shall have the weight, class or nominal thickness, the manufacturer's name or trademark and the letters "DI" or "DUCTILE" cast or stamped on the pipe by the manufacturer.

C. All interior and exposed ductile iron pipe and fittings shall be cement lined per AWWA C104 with bituminous seal coat per AWWA C104.

D. Flanges for both ductile iron pipe and fittings shall be cast solid or factory assembled by the pipe manufacturer and faced accurately at right angles to the axis of the pipe and shall be adequate for potable water service of 250 psi working pressure. Flanges shall conform to AWWA C110 for fittings and AWWA 115 for pipe. The bolt circle and bolt holes shall match those of Class 125 flanges shown in ANSI B16.1 and shall be joined with valves specified in Section 15100.

E. Flanged joints shall be made up with bolts conforming to ANSI B18.2.1 and nuts conforming to ANSI B18.2.2 with 1/8" thick ring or full-face rubber gasket placed between the flanges.

2.02 POLYVINYL CHLORIDE PIPE

A. PVC Schedule 40, 80, 120 - (ASTM D1785)

1. Pipe and fittings shall be PVC 1120 or PVC 1220 pressure rated pipe extruded from Class 12454-A or Class 12454-B material as defined in ASTM D1785. Pipe shall conform in all respects to the requirements of ASTM D1785.

2. Each length of pipe shall be clearly marked at 5-foot intervals with the nominal pipe size, material designation code, schedule size and pressure rating, ASTM designation D1785 and the manufacturer's name or trademark.

3. Joints shall be threaded, solvent cemented or flanged as indicated on the Pipe Schedule.

a. Solvent cement - ASTM D2564

b. Pipe threads - American Standard Taper

c. Gaskets - Soft rubber full face, flat type

d. Nuts, bolts & washers - Metal, torqued as recommended by the manufacturer.

4. Fittings and couplings shall conform with the following:

a. SCH 80 (threaded) - ASTM D2464

b. SCH 40 (socket type) - ASTM D2466

c. SCH 80 (socket type) - ASTM D2467

2.03 STEEL PIPE

A. Small diameter (less than 6 inch) steel pipe shall be "black iron" meeting the requirements of ASTM A120 or A53. Fittings and pipe ends shall be flanged or threaded as indicated in the Pipe Schedule.

1. Flanged - American Standard 125lb., flat face.

2. Threaded - American Standard Taper (ANSI B2.1).

2.04 STAINLESS STEEL PIPE

A. Stainless steel piping shall be Schedule 40 and be class 304.

PART 3 - EXECUTION

3.01 INSPECTION

A. Inspect the Work of other trades and verify that such Work is completed and accurate and that the work under this Section may properly proceed.

B. Verify that equipment shop drawings have been submitted and have been approved by Engineer.

C. Make necessary field measurements to ensure precise fit of all items. Utilize approved shop drawings for equipment dimensions.

D. Reinspect each length of pipe, fitting, and other pipeline appurtenances before installation for conformance, defects, and errors.

E. Do not install piping systems until conditions are satisfactory.

3.02 PREPARATION

A. Thoroughly clean interior of pipes, fittings, valves and appurtenances, joint surfaces, and gaskets before installation.

B. Tighten valve stuffing boxes and check in open and closed positions to ensure that parts are in satisfactory working condition. See Section 15100 for additional requirements.

3.03 PIPE INSTALLATION - GENERAL

A. Pipe installations shall be complete in every respect, insuring systems which will operate satisfactorily and quietly, free from unusual movement and vibration.

B. Cutting, fitting, repairing, and finishing of masonry, concrete, metal, and carpentry work that may be required for the installation of piping shall be done by craftsmen skilled in their respective trades.

C. Use only proper and suitable tools and appliances for the safe and convenient handling and installing of the pipe and fittings. Take care to prevent damage to any interior or exterior coatings.

D. Piping, connecting to equipment, shall be provided with unions or companion flanges located so that piping may be readily dismantled from equipment. See Section 15080 for unions required in other locations. Also, provide restrained or harnessed flexible couplings on inlet and discharge piping of equipment so that the equipment will be free from forces

transmitted by the piping. This provision for eliminating pipe strain shall be provided, whether shown on the Drawings or not.

E. Make connections between dissimilar metals with dielectric unions.

F. Install piping so that it will be free to expand and contract without injury to itself or its supporting structure. Provide self-equalizing type expansion joints in all runs of 90' or more, or more often where shown on the Drawings. Furnish and install guides and anchors.

G. In structural slabs less than 4" thick, pipes having "D" over 1" are prohibited. "D" is the maximum outside diameter or dimension of the pipe. In structural slabs 4" and thicker, "D" shall not exceed 1-3/8". Where pipes are permitted in the slab, the center-to-center spacing shall not be closer than 3 "D" and in no case less than 2" clear.

H. Provide wall sleeves castings, or pipes for piping passing through walls and floors, accurately located before concrete is placed. Sleeves for piping shall be as shown on the Drawings.

I. Where pipes pass through walls of rooms containing chlorine, chlorination equipment, hazardous gases, wastewater or sludge gases, or high moisture or humidity levels, fill annular spaces between pipe and wall sleeves with lead wool and hemp (on the poor side) and silicone caulking (on the clean side) to provide a gas- and moisture tight installation.

J. Accurately cut pipe with mechanical cutters. Install pipe without springing or forcing, and in true, level and square lines. Carefully fit pipe to the equipment, without forcing either the pipe or equipment. After the piping has been placed, check the equipment for level and alignment.

3.04 INSTALLATION OF FLANGED PIPING

A. Bring all joints in exact alignment and insert gaskets and bolts or studs in their proper places. Uniformly tighten bolts or studs around the joints. Where stud bolts are used, apply equal torque to each nut on the studs.

3.05 FIELD QUALITY CONTROL

A. Inspect all piping systems.

B. Perform leakage tests in accordance with Section 01666.

C. When requested by Engineer, verify that no forces are being transmitted to equipment by unbolting or unscrewing pipe joints at equipment connections.

3.06 ADJUST AND CLEAN

A. Carefully examine pipes and fittings for defects and do not install pieces which are known to be defective.

B. Piping installed out of alignment, installed at the wrong elevation, containing defective joints, or otherwise defective, shall be replaced.

C. Remove any dirt, debris, or other foreign material which has entered any portion of the piping, prior to testing and startup. Water and moisture are foreign materials in gaseous chlorine and other gaseous piping systems.

INTERIOR/EXPOSED PIPE SCHEDULE

PIPE DESIGNATION*	PIPE TYPE
ALUM DOSING CONDUIT, STP BLDG. TO BESST TANK	SCH. 80 PVC
STP BUILDING SANITARY WASTE FORCE MAIN	SCH.80 PVC

END OF SECTION

PART 1 - GENERAL

1.01 DESCRIPTION

A. Work covered by this Section includes the furnishing and installation of piping specialties, including, but not limited to, unions, gauges and other specialty items.

B. Related work specified in other Sections includes:

Basic Piping Materials and Methods	15055
Pipe and Pipe Fittings - Exposed	15060
Valves	15100

1.02 QUALITY ASSURANCE

A. The items in this Section are specified in a general manner and for normal conditions. Where corrosive liquids or gases are involved, or where materials are encountered which require special construction, use materials adequate for the service intended.

B. All pipes must be manufactured in USA unless otherwise approved by the regulatory agencies.

1.03 SUBMITTALS

A. See Section 01300.

B. Catalog cuts, technical data, and installation, operation and maintenance instructions for each item to be provided.

C. Manufacturers' Certifications of Compliance.

PART 2 - PRODUCTS

2.01 UNIONS

A. Use Required - For pipes with threaded, soldered, solvent cemented, or welded joints, provide unions at piping connections to each piece of equipment, at intervals of not more than 50' in straight runs of pipe, at each valve or cock (except where valves and cocks have union ends), and elsewhere as required to adequately service the piping system and equipment.

B. For Steel and Iron Pipe - A.A.R. 300 lb. malleable iron, brass to brass or brass to iron seats, ground joint.

C. For Copper Pipe - Wrought copper, solder joint, copper to copper unions.

D. For Plastic Pipe - PVC body with Viton seals.

2.02 PRESSURE, VACUUM AND COMPOUND GAUGES

A. Use Required - Where shown on the Drawings or specified, and on the suction and discharge of dry pit pumps and discharge lines of submersible pumps, and blowers with discharge piping 2" and larger.

B. Gauge - ANSI B40.1, Grade 2A, dial type utilizing a Bourdon tube, complete with weatherproof case and 4-1/2" dial.

C. Scales

1. Water & Gas - In psig with range to about two times the operating pressure.

2. Pumps - In psig when pump TDH is specified in psi, otherwise, in feet of water with range about two times the maximum operating pressure, but not less than 10% above the shut-off head.

3. Vacuum - 30" of mercury, minimum.

D. Standard Gauge Accessories - Provide each gauge with pressure sensing tubing, main pipeline pressure tap, a shut-off cock, and an air bleed.

E. Gauge Snubber - Provide a snubber with each gauge which may be subjected to rapid pressure changes so that pointers do not vibrate during operation.

F. Gauge Guard - Provide a gauge guard with each gauge connected to a pipeline carrying sewage, sludge, a high solids content liquid, and corrosive liquids and gases. Provide a diaphragm of a material which is inert to the

liquid or gas being sensed. Fill guard with a temperature stable instrument oil in the cavity between the diaphragm and the gauge.

G. Gauges for submersible pumps shall be remote mounted at an area to preclude physical damage and effects of freezing.

2.03 SLEEVES AND WALL PIPES

A. Whenever pipelines pass through any new concrete walls, floors, or partitions whether inside or outside the structure, cast iron or steel sleeves, or cast iron wall pipes shall be inserted in the forms at the proper elevation and set in the concrete work when placed. Wall pipes shall be installed in walls which contain water on one side only. Wall pipes and sleeves shall be provided with water stops.

B. Where wall pipe ends are flanged or are mechanical joint bells, they shall be drilled and tapped for stud bolts.

C. All sleeves and wall pipes shall meet the requirements of applicable AWWA standards, conforming to the requirements for, and pressure rating of, the pipe line in which installed.

D. Whenever the Contractor is required to make a penetration through an existing wall, a controlled oversized hole shall be cored, and the hole grouted, in accordance with the applicable portions of these Specifications. All waterproofing membranes disturbed shall be repaired and reflashed.

E. Install a "Link-Seal" by Thunderline Corp., equivalent by O.Z. Gedney, or equal, between wall and piping. Such shall be installed on the most accessible side. Fill voids behind seal with silicone caulking compound.

2.04 FLEXIBLE COUPLINGS

A. Where shown on the Drawings, and where needed to allow construction of piping systems, stress relief, or other purposes, the Contractor shall install flexible sleeve couplings as manufactured by the Dresser Manufacturing Company, Rockwell International, or equal. Coupling type shall be Dresser Style 138, Dresser Style 38, or equal for ductile iron and steel pipe. Equivalent type couplings shall be used for piping systems of other materials. (E.g. PVC, fiberglass, etc.). Locations shall be as approved by the Engineer.

B. Material requirements are as follows:

1. Cast Couplings

a. Sleeves - Grey iron, ASTM A126, Class B with smooth inside taper.

b. Followers - Malleable iron, ASTM A47, Grade 32510 or ductile iron ASTM A536.

c. Bolts and Nuts - High strength low alloy steel with heavy hex nuts, AWWA C111.

2. Steel Couplings

a. Sleeves - ASTM A53, A512 or other with minimum yield strength of 30,000 psi.

b. Followers - As above, or steel AISI C1018.

c. Bolts and Nuts - As specified in Paragraph B.1 above.

2.05 FLANGED ADAPTORS

A. Where shown on the Drawings, as specified, and where required, the Contractor shall install flanged adaptors as manufactured by the Dresser Manufacturing Company, Rockwell International, or equal.

B. Material requirements shall be as specified. With flanges conforming to the requirements of Section 15060 as applicable for the particular pipe installed.

2.06 OTHER MATERIALS

A. Provide any materials not specifically shown or described but required for a complete and proper installation. Select the materials and submit shop drawings to Engineer for approval.

PART 3 – EXECUTION

3.01 INSTALLATION

A. Carefully install work in accordance with the manufacturers' recommended installation instructions.

END OF SECTION

PART 1 - GENERAL

1.01 DESCRIPTION

A. Work covered by this Section includes the furnishing and installation of interior and exposed process valves and appurtenances where shown on the Drawings and specified herein.

B. Also included are underground valves and stops where shown on the Drawings and specified herein.

C. Related work specified elsewhere includes:

Pipe and Pipe Fittings Underground	02610
Underground Pressure Piping	02706
Pipe and Pipe Fittings - Exposed	15060

D. Provide all valves and auxiliary equipment required for complete and proper operation of all systems, whether or not they are specifically described.

1.02 QUALITY ASSURANCE

A. Similar types of valves shall each be the product of a single manufacturer and the same models shall be identical, with all parts interchangeable.

B. Acceptable products are specified in Part 2. Equivalent products of other manufacturers will be acceptable.

C. Valves shall be of ample strength to withstand and operate satisfactorily under the specified pressures.

D. Unless otherwise specified, perform shop tests with a hydrostatic water pressure equal to twice the rated pressure. Any valve which leaks or shows sign of defects is not permitted.

E. Single Source Responsibility: Comply with the requirements specified in Division 1.

F. American Society of Mechanical Engineers (ASME) Compliance: Comply with ASME B31.9 for building services piping and ASME B31.1 for power piping.

G. Manufacturers Standardization Society of the Valve and Fittings Industry (MSS) Compliance: Comply with the various MSS Standard Practices referenced.

1.03 SUBMITTALS

A. See Section 01300.

B. Catalog cuts, with cut-aways, and technical data.

C. Manufacturers' Certification of Compliance.

D. Manufacturers' installation instructions, including any limitations on installation.

E. Operation, maintenance, and spare parts data.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Preparation For Transport: Prepare valves for shipping as follows:

1. Ensure valves are dry and internally protected against rust and corrosion.

2. Protect valve ends against damage to threads, flange faces, and weld-end preps.

3. Set valves in best position for handling. Set globe and gate valves closed to prevent rattling; set ball and plug valves open to minimize exposure of functional surfaces; set butterfly valves closed or slightly open; and block swing check valves in either closed or open position.

B. Storage: Use the following precautions during storage:

1. Do not remove valve end protectors unless necessary for inspection; then reinstall for storage.

2. Protect valves from weather. Store valves indoors. Maintain valve temperature higher than the ambient dew point temperature. If outdoor storage is necessary, support valves off the ground or pavement in watertight enclosures.

C. Handling: Use a sling to handle valves whose size requires handling by crane or lift. Rig valves to avoid damage to exposed valve parts. Do not use hand wheels and stems as lifting or rigging points.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Manufacturer: Subject to compliance with requirements, provide products from one of the manufacturers listed in valve schedule.

2.02 VALVE FEATURES, GENERAL

A. Valve Design: Rising stem or rising outside screw and yoke stems.

B. Pressure and Temperature Ratings: As scheduled and required to suit system pressures and temperatures.

C. Sizes: Same size as upstream pipe, unless otherwise indicated.

D. Operators: Provide the following special operator features:

1. Hand wheels, fastened to valve stem, for valves other than quarter turn.

2. Lever handles, on quarter-turn valves 6-inch and smaller. Provide with square heads; provide one wrench for every valve.

3. Chain-wheel operators, for valves 2-1/2-inch and larger, installed 72 inches or higher above finished floor elevation. Extend chains to an elevation of 5'-0" above finished floor elevation.

E. Extended Stems: Where insulation is indicated or specified, provide extended stems arranged to receive insulation.

F. Bypass and Drain Connections: Comply with MSS SP-45 bypass and drain connections.

G. End Connections: As indicated in the valve specifications.

1. Threads: Comply with ANSI B1.20.1.

2. Flanges: Comply with ANSI B16.1 for cast iron, ANSI B16.5 for steel, and ANSI B16.24 for bronze valves.

3. Solder-Joint: Comply with ANSI B16.18.

a. Caution: Where soldered end connections are used, use solder having a melting point below 840 deg F for gate, globe, and check valves; below 421 deg F for ball valves.

2.03 BALL VALVES

A. Ball Valves, 1 Inch and Smaller: Rated for 150 psi saturated steam pressure, 400 psi WOG pressure; two-piece construction; with bronze body conforming to ASTM B 62, standard (or regular) port, chrome-plated brass ball, replaceable "Teflon" or "TFE" seats and seals, blowout-proof stem, and vinyl-covered steel handle. Provide solder ends for domestic hot and cold water service.

B. Ball Valves, 1-1/4-Inch to 2-Inch: Rated for 150 psi saturated steam pressure, 400 psi WOG pressure; 3-piece construction; with bronze body conforming to ASTM B 62, conventional port, chrome-plated brass ball, replaceable "Teflon" or "TFE" seats and seals, blowout proof stem, and vinyl-covered steel handle. Provide solder ends for domestic hot and cold water service.

2.04 BUTTERFLY VALVES

A. Butterfly Valves, 2-1/2-Inch and Larger: AWWA C-504. The valve body shall be cast iron conforming to ASTM A48, Class 40 or A 126, Class B. Ends shall be flanged. The disc shall be constructed of ASTM A 48, Class 40 cast iron for valves 12-inches and smaller and ASTM A 536, Grade 65-45-12 ductile cast iron for valves 14" and larger. The valve seat shall be BUNA-N or natural rubber and EPDM for air services.

2.05 CHECK VALVES

A. Swing Check Valves, 2-Inch and Smaller: MSS SP-80; Class 125, cast-bronze body and cap conforming to ASTM B 62; with horizontal swing, Y-pattern, and bronze disc; and having threaded or solder ends. Provide valves capable of being reground while the valve remains in the line.

Provide Class 150 valves meeting the above specifications, with threaded end connections, where system pressure requires or where Class 125 valves are not available.

B. Swing Check Valves, 2-1/2-Inch and Larger: AWWA C508 200 psi working pressure, cast iron body and bolted cap conforming to ASTM A 126, Class B; horizontal swing, stainless steel hinge pin, and bronze disc with bronze disc ring; and flanged ends. Provide valves capable of being refitted while the valve remains in the line. Valve shall be Cushion Swing Checks as manufactured by Golden-Anderson or equal.

C. Ball Check Valves, Horizontal or Vertical, Above Grade, Above or Below Grade Installations: cast iron ASTM-A-126-3 body Class 125 flanged ends with bolted cover for inspection and removal of ball. Interior housing shall allow free and unobstructed flow with no projections or pockets to trap solid material. Positive seating of ball shall be ensured without the use of

springs or other mechanical means. Ball shall be of cast iron ASTM-A-126-B construction, coated with vulcanized BUNA-N rubber. Valve shall be operable in the horizontal or vertical position and equipped with a sinking ball. Valve shall be capable of 150 psi working pressure. Valve shall be as manufactured by ITT FLYGT Model 5087 or equal.

2.06 VALVE BOXES

A. Required - Valve boxes are required on all buried valves.

B. Box - Two-piece, cast iron, slide type with 5-1/4" shafts, recessed cover, upper section and lower section, Clow F-2452, Mueller H. 10360 W/H-10361, or approved equal.

C. Cover - Cast in the cover the word, "WATER" or "SEWAGE", as applicable.

D. Seals - Seal valve box covers and each slide section to exclude surface water and the entrance of dirt. Use rubber "O" ring gaskets or a 5/8" rope impregnated with a non-hardening tar compound equal to E-Z Rise Seal Pack.

E. Spare Seals - Furnish spare seals in a quantity equal to 5% of the total number, or footage, used in the Work.

F. Coatings - Two coats of asphaltic varnish, inside and outside, applied by manufacturer.

G. Handles - Furnish one (1) operator handle at 7'-6" long.

2.07 PLUG VALVES

A. Valves shall be of the non-lubricated eccentric type equipped with resilient faced, balanced plugs and shall be furnished with end connections as shown on the plans.

B. Port area for valves less than 6" shall be at least 80% of full pipe area. Port areas of 6" and larger valves shall be at least 100% of full pipe area.

C. Valve bodies shall be of ASTM A126, Class B cast iron. All exposed nuts, bolts, springs, washers, etc. shall be zinc plated for corrosion resistance. Resilient plug facings shall be of Nitrile Butadiene suitable for use with septic sewage (hydrogen sulfide).

D. Valves shall be furnished with corrosive resistant seats. Seats in 3" and larger valves shall have a welded-in overlay of high nickel content on all surfaces containing the plug face.

E. Valves shall be furnished with replaceable, permanently lubricated, stainless steel sleeve-type bearings in the upper and lower journals.

F. Valve pressure ratings shall be as follows and shall be established by hydrostatic tests as specified by ANSI Standard B16.1-1976. Pressure ratings shall be 175 psi for valves through 12", 150 psi for valves in sizes 14" through 36". Valves shall provide drip-tight shutoff up to the full pressure ratings. Valves shall be capable of providing drip-tight shutoff up to the full valve rating with pressure in either direction.

G. Valve shaft seals, bearings and seats shall comply with applicable portions of AWWA C504 and 507.

H. Valves shall be as manufactured by DeZurik, or equal.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine valve interior through the end ports for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks used to prevent disc movement during shipping and handling.

B. Actuate valve through an open-close and close-open cycle. Examine functionally significant features, such as guides and seats made accessible by such actuation. Following examination, return the valve closure member to the shipping position.

C. Examine threads on both the valve and the mating pipe for form (i.e., out-of-round or local indentation) and cleanliness.

D. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Check gasket material for proper size, material composition suitable for service, and freedom from defects and damage.

E. Prior to valve installation, examine the piping for cleanliness, freedom from foreign materials, and proper alignment.

F. Replace defective valves with new valves.

3.02 VALVE ENDS SELECTION

A. Select valves with the following ends or types of pipe/tube connections:

1. Copper Tube Size, 2-Inch and Smaller: Solder ends.

2. Steel Pipe Sizes, 2-Inch and Smaller: threaded or flanged as shown on the Drawings.

3. Steel Pipe Sizes 2-1/2 Inch and Larger: Flanged.

3.03 VALVE INSTALLATIONS

A. General Application: Use gate, ball, and butterfly valves for shut-off duty; globe, ball, and butterfly for throttling duty. Refer to piping system specification sections and contract drawings for specific valve applications and arrangements.

B. Locate valves for easy access and provide separate support where necessary.

C. Install valves and unions for each fixture and item of equipment arranged to allow equipment removal without system shutdown. Unions are not required on flanged devices.

D. Install valves in horizontal piping with stem at or above the center of the pipe.

E. Install valves in a position to allow full stem movement.

F. Installation of Check Valves: Install for proper direction of flow as follows:

1. Swing Check Valves: Horizontal position with hinge pin level.

2. Ball Check Valves: Horizontal or vertical position, between flanges.

3.04 SOLDER CONNECTIONS

A. Cut tube square and to exact lengths.

B. Clean end of tube to depth of valve socket with steel wool, sand cloth, or a steel wire brush to a bright finish. Clean valve socket in same manner.

C. Apply proper soldering flux in an even coat to inside of valve socket and outside of tube.

D. Open gate and globe valves to fully open position.

E. Remove the cap and disc holder of swing check valves having composition discs.

F. Insert tube into valve socket, making sure the end rests against the shoulder inside valve. Rotate tube or valve slightly to ensure even distribution of the flux.

G. Apply heat evenly to outside of valve around joint until solder will melt upon contact. Feed solder until it completely fills the joint around tube. Avoid hot spots or overheating valve. Once the solder starts cooling, remove excess amounts around the joint with a cloth or brush.

3.05 THREADED CONNECTIONS

A. Note the internal length of threads in valve ends, and proximity of valve internal seat or wall, to determine how far pipe should be threaded into valve.

B. Align threads at point of assembly.

C. Apply appropriate tape or thread compound to the external pipe threads (except where dry seal threading is specified).

D. Assemble joint, wrench tight. Wrench on valve shall be on the valve end into which the pipe is being threaded.

3.06 FLANGED CONNECTIONS

A. Align flange surfaces parallel.

B. Assemble joints by sequencing bolt tightening to make initial contact of flanges and gaskets as flat and parallel as possible. Use suitable lubricants on bolt threads. Tighten bolts gradually and uniformly with a torque wrench.

C. For dead-end service, butterfly valves require flanges both upstream and downstream for proper shutoff and retention.

3.07 FIELD QUALITY CONTROL

A. Tests: After piping systems have been tested and put into service, but before final adjusting and balancing, inspect valves for leaks. Adjust or replace packing to stop leaks; replace valves if leak persists.

3.08 ADJUSTING AND CLEANING

A. Cleaning: Clean mill scale, grease, and protective coatings from exterior of valves and prepare valves to receive finish painting or insulation.

VALVE PRESSURE/TEMPERATURE CLASSIFICATION SCHEDULES

THIS PAGE WAS INTENTIONALLY LEFT BLANK

PART 1 – GENERAL

1.01 DESCRIPTION

A. Work covered by this Section includes the furnishing and installation of interior and exposed process valves and appurtenances where shown on the Drawings and specified herein.

B. Also included are underground valves and stops where shown on the Drawings and specified herein.

C. Related work specified elsewhere includes:

Pipe and Pipe Fittings Underground	02610
Underground Pressure Piping	02706
Pipe and Pipe Fittings - Exposed	15060

D. Provide all valves and auxiliary equipment required for complete and proper operation of all systems, whether or not they are specifically described.

1.01 RELATED DOCUMENTS

A. Requirements of the following Sections apply to this Section:

Pipe and Pipe Fittings – Exposed	15060
Piping Specialties	15080

1.02 SUMMARY

A. This section includes the following:

1. Horizontal-piping hangers and supports.
2. Vertical-piping clamps.
3. Hanger-rod attachments.
4. Building attachments.
5. Saddles and shields.
6. Spring hangers and supports.
7. Miscellaneous materials.
8. Pipe alignment guides.
9. Anchors.
10. Equipment supports.

1.03 DEFINITIONS

A. Terminology used in this section is defined in MSS SP-90.

1.04 SUBMITTALS

A. General: Submit the following in accordance with conditions of contract and Division 1 specification sections.

B. Product data, including installation instructions for each type of support and anchor. Submit pipe hanger and support schedule showing Manufacturer's figure number, size, location, and features for each required pipe hanger and support.

C. Product certificates signed by the manufacturer of hangers and supports certifying that their products meet the specified requirements.

D. Welder certificates signed be Contractor certifying that welders comply with requirements specified under "Quality Assurance" Article.

E. Maintenance data for supports and anchors for inclusion in Operating and Maintenance Manual specified in Division 1 and Division 15 Section "Basic Mechanical Requirements."

F. Submit detail of pipe support anchorage.

1.05 QUALITY ASSURANCE

A. Quality welding processes and welding operators in accordance with AWS D1.1 "Structural Welding Code - Steel."

1. Certify that each welder has satisfactorily passed AWS qualification tests for welding processes involved and, if pertinent, has undergone recertification.

B. Qualify welding processes and welding operators in accordance with ASME "Boiler and Pressure Vessel Code," Section IX, "Welding and Brazing Qualifications."

C. Regulatory Requirements: Comply with BOCA plumbing code pertaining to product materials and installation of supports and anchors.

PART 2 - PRODUCTS

2.01 MANUFACTURED UNITS

A. Hangers and support components shall be factory fabricated of materials, design, and manufacturer complying with MSS SP-58.

1. Components shall have galvanized coatings where installed for piping and equipment that will not have field-applied finish.

2. Pipe attachments shall have nonmetallic coating for electrolytic protection where attachments are in direct contact with copper tubing.

3. All pipe hangers and supports in process area shall be stainless steel class 316.

B. Thermal Hanger Shield Inserts: 100-psi average compressive strength, waterproofed calcium silicate, encased with a sheet metal shield. Insert and shield shall cover entire circumference of the pipe and shall be of length indicated by manufacturer for pipe size and thickness of insulation.

2.02 MISCELLANEOUS MATERIALS

A. Stainless Steel Plates, Shapes, and Bars type 304 unless directly exposed to sewage – type 316.

B. Cement Grout: Portland cement (ASTM C 150, Type I or Type III) and clean uniformly graded, natural sand (ASTM C 404, Size No. 2). Mix ratio shall be 1.0 part cement to 3.0 parts sand, by volume, with minimum amount of water required for placement and hydration.

C. Pipe Alignment Guides: Factory fabricated, of cast semisteel or heavy fabricated steel, consisting of bolted two-section outer cylinder and base with two-section guiding spider that bolts tightly to pipe. Length of guides shall be as recommended by manufacturer to allow indicated travel.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine sub states and conditions under which supports and anchors are to be installed. Do not proceed with installing until unsatisfactory conditions have been corrected.

3.02 INSTALLATION OF HANGERS AND SUPPORTS

A. General: Install hangers, supports, clamps and attachments to support piping properly from structure; comply with MSS SP-69 and SP-89. Arrange for grouping of parallel runs of horizontal piping supported together on field-fabricated, heavy-duty trapeze hangers where possible. Install supports with maximum spacing complying with MSS SP-69. Where piping of various sizes is supported together by trapeze hangers, space hangers for smallest pipe size or install intermediate supports for smaller diameter pipe as specified above for individual pipe hangers.

B. Space attachments within maximum piping span length indicated in MSS SP-69. Install additional attachments at concentrated loads, including valves, flanges, guides, strainers, expansion joints, and at changes in direction of piping.

C. Install hangers and supports complete with necessary bolts, rods, nuts, washers, and other accessories.

D. Field-Fabricated, Heavy-Duty Steel Trapezes: Fabricate from steel shapes selected for loads required; weld steel in accordance with AWS D-1.1.

E. Install hangers and supports to allow controlled movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends and similar units.

F. Load Distribution: Install hangers and supports so that piping live and dead loading and stresses from movement will not be transmitted to connected equipment.

G. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes, and so that maximum pipe deflections allowed by ASME B31.9 Building Services Piping Code is not exceeded.

H. Insulated Piping: Comply with the following installation requirements.

1. Clamps: Attach clamps, including spacers (if any), to piping with clamps projecting through insulation; do not exceed pipe stresses allowed by ASME B31.9.

2. Saddles: Install protection saddles MSS Type 39 where insulation without vapor barrier is indicated. Fill interior voids with segments of insulation that match adjoining pipe insulation.

3. Shields: Install protective shields MSS Type 40 on cold water piping that has vapor barrier. Shields shall span an arc of 180 degrees and shall have dimensions in inches not less than the following:

NPS	LENGTH	THICKNESS
¼ THROUGH 3½	12	0.048
4	12	0.060
5 & 6	18	0.060
8 THROUGH 14	24	0.075
16 THROUGH 24	24	0.105

4. Pipes 8 inches and larger shall have wood inserts.

5. Insert material shall be at least as long as the protective shield.

6. Thermal Hanger Shields: Install where indicated, with insulation of same thickness as piping.

3.03 INSTALLATION OF ANCHORS

A. Install anchors at proper locations to prevent stresses from exceeding those permitted by ASME B31.9 and to prevent transfer of loading and stresses to connected equipment.

B. All high piping shall be supported as noted on the Drawings.

C. Fabricate and install anchors by welding steel shapes, plates, and bars to piping and to structure. Comply with ASME B31.9 and with AWS Standards D1.1.

D. Anchor Spacings: Install anchors at ends of principal pipe runs, at intermediate points in pipe runs between expansion loops and bends. Make provisions for preset of anchors as required to accommodate both expansion and contraction of piping.

3.04 INSTALLATION OF PIPE ALIGNMENT GUIDES

A. Install pipe alignment guides on piping that adjoins expansion joints and elsewhere as required.

B. Anchor to building substrate.

C. Equipment Bases: Unless otherwise noted, all equipment, panels and the like shall be set on concrete house keeping pads which are a minimum of 6" high and extend a minimum of 3" past the edge of the equipment.

3.05 EQUIPMENT SUPPORTS

A. Fabricate structural steel stands to suspend equipment from structure above or support equipment above floor.

B. Grouting: Place grout under supports for piping and equipment.

C. Equipment Bases: Unless otherwise noted, all equipment, panels and the like shall be set on concrete housekeeping pads which are a minimum of 6 inches high and extend a minimum of 3 inches past the edge of the equipment.

3.06 METAL FABRICATION

A. Cut, drill, and fit miscellaneous metal fabrications for pipe anchors and equipment supports. Install and align fabricated anchors in indicated locations.

B. Fit exposed connections together to form hairline joints. Field weld connections that cannot be shop welded because of shipping size limitations.

C. Field Welding: Comply with AWS D1.1 for procedures of manual shielded metal-arc welding, appearance and quality of welds made, methods used in correcting welding work, and the following:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.

2. Obtain fusion without undercut or overlap.

3. Remove welding flux immediately.

4. Finish welds at exposed connections so that no roughness shows after finishing, and so that contours welded surfaces to match adjacent contours.

3.07 ADJUSTING

A. Hanger Adjustment: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.

B. Touch-up Painting: Immediately after erection of anchors and supports, clean field welds and abraded areas of shop paint and paint exposed areas with same material as used for shop painting to comply with SSPC-PA-1 requirements for touch-up of field-painting surfaces.

1. Apply by brush or spray to provide a minimum dry film thickness of 2.0 mils.

C. Touch-Up Painting: Cleaning and touch-up painting of field welds, bolted connections, and abraded areas of the shop paint on miscellaneous metal is specified in Division 9 section "Painting" of these specifications.

D. For galvanized surfaces clean welds bolted connections and abraded areas and apply galvanizing repair paint to comply with ASTM A 780.

RESOLUTION OF APPROVAL FOR AREA VARIANCE

ZONING BOARD OF APPEALS
TOWN OF NORTH CASTLE

----------X

In the matter of the Application of

SUMMIT CLUB PARTNERS, LLC

----------X

WHEREAS, the applicant, SUMMIT CLUB PARTNERS, LLC, 570 Bedford Road, Armonk, NY 10504 and known on the Tax Assessment Map of the Town of North Castle as Section 101.02, Block 1, Lot 28.2 and located in the R2A Zoning District, has applied for the following variance from the provisions of the zoning code of the Town of North Castle. In order to obtain site plan approval for 73 residential units, the applicant is requesting the following variance:

Section 355-15-G(1)(a) of the Town Code where the maximum fence height permitted is 6 feet and ten feet are proposed for the tennis courts, requiring a variance of 4 feet.

WHEREAS, prior to the hearing, members of the Board of Appeals conducted an inspection of the premises and surrounding neighborhood; and whereas on August 4, 2022 the Board conducted a duly noticed public hearing on the application, at which time all interested parties had the opportunity to be heard; and

WHEREAS, The Zoning Board of Appeals was referred this variance from the Planning Board of the Town of North Castle by letter dated July 12, 2022 as part of the record.

WHEREAS, the applicant has submitted proof of proper notice to nearby property owners required to receive notice thereof:

NOW, THEREFORE, the Board of Appeals makes the following findings:

1. The requested activity is a Type 2 action under the State Environmental Quality Review Act.

2. The variance is not substantial.

3. That the effect of any increased population density which may thus be produced upon available services facilities is not significant.

4. There will be no substantial change to the character of the neighborhood nor a substantial detriment to adjoining properties.

5 That the difficulty cannot be alleviated by some other method feasible for the applicant to pursue.

6. That in view of the manner in which the difficulty arose and considering all of the above factors, the `interests of justice will be served by allowing the variance.

7. That the variance would not cause adverse aesthetic, environmental or ecological impacts on the property or on the surrounding area.

NOW, THEREFORE, BE IT RESOLVED, that the application for relief by the granting of the variance from the requirements of the Zoning Code of the Town of North Castle is hereby granted.

Motion by: **LESTER BERKELHAMER**

Seconded by: **ROBERT GREER**

LESTER BERKELHAMER	**voting YES**
JOSEPH MONTICELLI	**voting YES**
SCOTT STOPNIK	**voting YES**
ROBERT GREER	**voting YES**
JOHN STIPO	**voting YES**

THERE BEING FIVE (5) VOTES IN FAVOR, THE RESOLUTION IS GRANTED BY ORDER OF THE BOARD OF APPEALS.

DATED: 10/9/22

Joseph Monticelli, Chairman

Gerald Reilly, Esq.

I HEREBY CERTIFY this to be a true copy of a resolution approved by the vote of the Zoning Board of Appeals of the Town of North Castle at a meeting held on August 4, , 2022 at the Town Hall, 15 Bedford Road, Armonk, New York.

BLASTING PLAN
OCTOBER 21, 2022

INTRODUCTION:

This Blasting Plan describes the blasting operations that may occur during construction of the Summit Club Project. The purpose of this Blasting Plan is to provide project-specific information concerning blasting procedures, including the safe use and storage of explosives, and the measures and best management practices (BMPs) that will be implemented to prevent potential adverse impacts to human health, safety, and the environment from the use of explosives during blasting activities.

The exact scope of blasting to be undertaken and quantities of rock is undetermined at this time. This Report will be updated as required upon receipt of the forthcoming additional subsurface investigation and the hiring of a licensed Blasting Subcontractor.

REGULATORY OVERVIEW:

The project shall comply with all conditions within this plan as well all requirements and regulations included in Part ll Chapter 122 of the Town of North Castle Code. The project shall also comply with all Federal Occupational Safety and Health Administration (OSHA) and Federal Bureau of Alcohol, Tobacco, and Firearms (BATF) regulations regarding the use and storage of explosives.

As there may be conflicts between the laws and regulations governing the use and storage of explosives, the project will comply with the most stringent provisions.

LOCATION:

Blasting will occur primarily at terrain where rock is encountered below grade, where it cannot be removed with traditional excavation and earth moving equipment. It is anticipated that rock will be encountered in various areas throughout the project where excavation is required for the installation of building foundations and utilities.

PROCEDURES:

The project shall contract with a qualified, experienced, and licensed blasting contractor to perform the work. The Blasting Contractor shall use current and professionally accepted methods, products, and procedures to maximize safety during blasting operations. Blasting procedures will be carried out according to and in compliance with applicable laws, and will be closely monitored by the Project Construction Manager, Lasberg Construction Associates, Inc. as well as the project Geotechnical Engineer, Carlin Simpson Associates.

Blasting procedures will be conducted according to the following four basic principles:

1. The blast will produce fractured rock of appropriate dimensions.
2. The blast will prevent/minimize production of flyrock and air blast hazards.
3. The blast will minimize peak particle velocities.
4. The blast will be scaled/sized to minimize overblasting.

The project shall provide a description of all structures and utilities, residential dwellings, garages, tennis courts, etc. within 500' of the blast site.

The Blasting Contractor shall furnish the Town of North Castle with a Certificate of Insurance issued by a company to do business in the Ste of New York in accordance with Town requirements. Additionally, the Blasting Contractor shall provide the Town with an Indemnification and Hold Harmless Agreements.

Notices shall be sent to all property owners within 500' of the blast site.

Blasting shall only occur between the hours of 8:00 AM and 5:00 PM Monday through Saturday. No blasting shall be conducted on Sunday and Federal holidays.

SAFETY MEASURES:

Safe storage and use of explosive materials will be a top priority during construction. The project will conduct pre-blast surveys of all structures within 500 feet and will employ the services of a testing lab to monitor the vibration seismic impacts at all times when blasting operations are being conducted.

All personnel responsible for handling explosives and present in and around blasting sites will be fully informed and trained in applicable safety precautions/procedures.

The Blasting Contractor shall use a signaling system to alert workers of an impending blast. The signaling system will be comprised of the following components:

1. Warning Signal: 5 minutes prior to the blasting signal, a 1-minute series of long, audible signals will be sounded at the blast site.
2. Blasting Signal: 1 minute prior to a blast, a series of short, audible signals will be sounded at the blast site.
3. All-clear Signal: Following inspection of the blast area, a prolonged, audible signal will be sounded at the blast site.

Signage shall be posted at key access points to ensure the public does not accidently enter a blast zone. Before blasting, the Blasting Supervisor will make sure the blasting area is clear. Following detonation, the blasting area will be inspected for undetonated or misfired explosives. Once the area has been inspected, the "all-clear" signal will sound.

Blasting mats shall be used to prevent flyrock from exiting the blast area.

MISCELLANEOUS:

- Rock Hammering: At various stages of the project the size, location and quantity of rock may require the use of a pneumatic chipping hammer. All rock hammering shall be conducted in accordance of the Town of North Castle Code.

- Upon contracting with a Blasting Contractor, the project shall revise this Plan as required.

PRELIMINARY ROCK CRUSHING PLAN
OCTOBER 21, 2022

INTRODUCTION:

This Rock Crushing Plan describes the crushing operations that may occur during construction of the Summit Club Project. The purpose of this Crushing Plan is to provide project-specific information concerning crushing procedures, including the measures and best management practices (BMPs) that will be implemented to prevent potential adverse impacts to human health, safety, and the environment during crushing activities.

The exact scope of crushing to be undertaken and quantities of rock is undetermined at this time. This plan will be updated as required upon receipt of the forthcoming additional subsurface investigation and the hiring of a Site Contractor.

REGULATORY OVERVIEW:

The project shall comply with all conditions within this plan as well all requirements and regulations included in the Town of North Castle Code. The project shall also comply with all Federal Occupational Safety and Health Administration (OSHA).

As there may be conflicts between the laws and regulations governing the use and storage of explosives, the project will comply with the most stringent provisions.

LOCATION:

Rock crushing will occur in close proximity to where rock removal is conducted, and approximately as depicted on the attached "Preliminary Rock Crushing Plan" dated 10-21-22.

DURATION AND HOURS OF OPERATION:

Rock crushing shall be conducted between the hours of 8:00 AM and 5:00 PM Monday through Saturday. No rock crushing shall take place on Sunday of federal holidays. The duration of the rock crushing activity shall be further defined upon receipt of additional sub surface information.

PROCEDURES:

Blasted rock shall be stockpiled in a segregated area near the crusher. Once process through the crusher, the processed rock shall be neatly stockpile for future use. During the crushing operation, the site contractor shall use dust containment measures to limit the amount of dust dispersed into the air.
