Town of North Castle Town Board
15 & 17 Bedford Road
Armonk, New York 10504

Re: **Special Permit Site Plan Approval**

Dear Respective Members of the Town Board,

On behalf of Chloe & Mikhail Gasiorowski, we are pleased to submit a Special Use Permit Application/Site Plan Application for additional horses for property situated at 263 Bedford Banskville Road. In support of these Applications, we have attached the following supporting documents:

1. Applications
   - Site Development Permit Application (pg. 10)
   - Special Use Permit Application (pg. 36)
2. Project Narrative, includes the following Technical Exhibits
   - 1 Wetland Soils Report by Jay Fain & Associates, LLC, dated March 4, 2021
   - 2 Tree Survey Narrative by Jay Fain & Associates, LLC
   - 3 Updated Archeological Review by Historical Perspectives, Inc. (HPI) for 263 Bedford Banksville Rd, dated May 19, 2022
   - 4 Horse Management Plan by Jay Fain & Associates, LLC
     USDA Pasture Management Guide for Horse Owners
3. Stormwater Pollution Prevention Plan (SWPPP) by DiMarzo & Bereczky - *To Be Provided*
4. Drawings / Plans
   - Landscape Plans / Tree Removal Plans by Jay Fain & Associates, LLC, dated June 16, 2021
     - CO Cover Sheet
     - S-1 Special Permit - Site Plan
     - L-1 Special Permit - Landscape Plan

- L-2 Special Permit - Landscape Details
- TR-1 Special Permit - Tree Removals
- TR-2 Special Permit - Tree Removals Lists

- Site Development Plans Prepared by, and Signed & Sealed by, DiMarzo & Berezcky, Inc, dated 6/10/2022
  - C-0 Zoning Site Plan
  - C-1 Site Development Plan
  - C-2 Gross Land Coverage Plan

Architectural Plans Prepared by Teo Siguenza Architect, Signed & sealed by Teo Siguenza

- Proposed Main House Single Family Residence, dated 5-16-22
  - A100.00 Proposed Basement Plan
  - A101.00 Proposed First Floor Plan
  - A102.00 Proposed Second Floor Plan
  - A200.00 Proposed Exterior Elevations
  - A201.00 Proposed Exterior Elevations
  - A101.10 Floor Area Calculation
  - Proposed Section
- Proposed Pool House, dated 5-16-22
  - P101.00 Proposed Floor Plans & Exterior Elevations

- Architectural Plans Prepared by Old Town Barns, Signed & sealed by Mark Bergeron, PE
  - Proposed Stable for 263 Bedford Banksville Road, dated 2/23/22
    - Cover Sheet
    - A-100 Floor Plans
    - A-200 Elevations
    - A-210 Elevations
  - Proposed Stable Addition for 263 Bedford Banksville Road, dated 2/23/22
    - Cover Sheet,
    - A-100 Floor Plans
    - A-200 Elevations
  - Proposed Servants' Quarters for 263 Bedford Banksville Road, dated 2/23/22
    - Cover Sheet
    - A-100 Floor Plans
    - A-200 Elevations
  - Proposed Garage for 263 Bedford Banksville Road, dated 2/23/22

- Cover Sheet
- A-100 Floor Plans
- A-200 Elevations

5. Floor Area Calculations
   - Worksheet by Teo Siguenza Architect, Main Structures (Main House & Pool House)
   - Worksheet by Old Town Barns, Accessory Structures
   - Worksheet combining Main Structures & Accessory Structures
6. Gross Land Coverage Calculations Worksheet by DiMarzo & Berezcky, Inc.
7. Survey / Topography of Property, Prepared by TC Merritts Land Surveyors, dated June 21, 2021
8. NYSDEC Freshwater Wetland Map with Boundary Validation signed by DEC Staff, dated July 22, 2021

The Town Board should take note that as part of the larger planning and approval process, the applicant has been meeting with interested neighboring property owners to address any concerns that they may have regarding the equestrian use of the property. The results of these discussions have been positive and are embodied in the August 9, 2022, Neighbor Meeting Notes as attached to this transmittal. Both the Applicant and the neighbors are in agreement in principle, with the substance of this document and have had preliminary discussions with the Town Planner and Town Attorney regarding its implementation.

If you have questions, please do not hesitate to contact me.

Sincerely,

Jay Fain MS, PSS, CERP, CPESC
Registered Soil Scientist

263 Bedford Banksville Road
Neighbor Meeting Notes
August 9, 2022

263 Bedford Banksville Road
Neighbor Meeting Notes
August 9, 2022

In attendance: Gerry and Leslie Geist, Eve Rice, M.D., Tim Mattison, M. D., Chloe Gasiorowski, Jay Fain, Echo.

Description of proposed use: The primary use of the 21.62-acre parcel located at 263 Bedford Banksville Road, North Castle, NY is for a single-family residence for Mikhail and Chloe Gasiorowski and family. The Gasiorowskis acknowledge that they are subject to the uses and restrictions of any other single-family residence in the R-4A zone and will abide by such but will not be subject to additional zoning restrictions as pertains to the primary use as a single- family residence.

A secondary use to allow the keeping of additional horses is being proposed by Special Permit procedures under Town of North Castle Zoning Chapter 355-40 D. Chapter 355-40 D. specifies the use shall be solely for the noncommercial use and enjoyment of residents and their guests and no for-profit horse activity shall be permitted.

In consultation with the Geist's, Eve Rice, and Tim Mattison, the Gasiorowskis are agreeing to additional conditions to be associated with the Special Permit as follows:

1. Number of horses – The number of horses will be limited to 20 horses. All horses will be owned or leased by the property owner and no boarding of horses will be permitted.
2. Farrier Records – As prima facia evidence of animal ownership, farrier records will be provided on an annual basis to the Town of North Castle Building Department.
3. Commercial activities – In accordance with the provision of the Special Permit are not allowed. This includes riding lesson, the boarding of horses, bartering of services for lessons or privilege to ride and no for-profit **or not-**

for-profit horse shows or events. No structure, temporary or permanent, for viewing of horse shows is permitted.

4. Site Planning and Engineering. As part of the site plan approval process, the following engineering detail shall be provided in accordance (at a minimum) with Town and State regulations:

    a. Turning templates will be prepared demonstrating egress and ingress to the site is safe and adequate for large trucks including horse trailers, fire trucks, garbage and dumpster vehicles, oil trucks, etc.
    b. The entry will be studied, and improvements suggested, to prevent erosion and potential flooding or deposit of runoff debris at the intersection of Bedford Banksville Road. All parties acknowledge that the situation at Bedford Banksville Road is not fully the responsibility of the owner, but they will make all reasonable efforts to address and correct the current deficiencies to the satisfaction of the Town Engineer.
    c. A Stormwater Pollution Prevention Plan will be prepared in accordance with State DEC and Town regulation to ensure that there will be no increase of runoff from the property and that runoff from the proposed activities will not negatively affect water quality, especially as it pertains to the Mianus River.
5. Landscape Buffer - A 150-foot landscape buffer will be maintained between any equestrian activities on 263 Bedford Banksville Road and the property of Gerry and Leslie Geist. The Geist's will be consulted on the management of the buffer, and if additional screen planting is necessary or desirable, it is to be provided at the expense of the Gasiorowskis.
6. The residences on the property are for the use of the Gasiorowskis, their family guests, and employees, only. No short-term rental of the groom's or caretaker's residences will be allowed.
7. Special use permit does not run with the land as a right but should remain in effect so long as and subject to the terms and conditions of the special use permit and whatever documentation the town requires for its' continuance, remain in effect.
    a. Upon any sale, transfer, lease or assignment of the property, the neighbors and owner of the property would like a simple approach to have the new owners of the property accept and be bound to the

terms of the original special use permit if the permit is to remain in effect.

b. Form and content of the approach upon any sale, assignment, or transfer of any sort is to be determined by the town board but should be documented as part of the original Special Use Permit.
c. Neighbors and owner of the property recognize that the owners will be making a substantial investment in the property and do not want to make any new owners be required to go through a lengthy proceeding to continue the permit but rather are looking for a simple procedure to allow the permit to be continued if original conditions are met.

8. The neighbors acknowledge that the proposed use is compatible with the existing zoning and current surrounding residential use, and it is their express intent that the use remain non-commercial.

Important General Information

- Prior to submitting an application, the "Notice to Applicants" should be reviewed.

- To appear before the Planning Board, all required application materials shall be submitted not later than **12:00 P.M., Monday, fourteen (14) days** prior to the date of the Planning Board meeting at which the application is scheduled to be heard or as otherwise noted by the Planning Board Secretary. Continuing Business can be submitted 12 days prior to the Next Planning Board meeting by the close of business. Except where noted.

  If all required application materials, including the pertinent application fee and escrow monies are not submitted by that deadline, the application shall be automatically removed from the agenda.

  At the discretion of the Planning Board Chairman, the application may be rescheduled, if appropriate, for the next available Planning Board meeting or the application may be removed from future agendas altogether. Without prior authorization from the Planning Board, application submissions shall not be accepted at Planning Board meetings.

- At the time of submission, all required application materials shall be submitted. **Piecemeal** submissions **shall not** be accepted. Substitution of previously submitted materials shall not be permitted.

- All submissions shall be dated, with revision dates identified on new submissions.

- All submissions shall be accompanied by a cover letter describing the project and/or any changes as compared to previous submissions.

- For distribution purposes and mailing to the Planning Board Members and others (as required), multiple copies of application materials shall be collated into separate sets, each containing one copy of every submitted document. All application materials shall be submitted in a form that fits into a **12" x 17" envelope.** Plans shall be **folded** and **rubber banded** as necessary.

- To be considered complete for Planning Board hearing purposes, an application package shall contain the information identified in Parts IV and V of this application form.

- For purposes of completing this application form, all responses provided shall be printed, except as otherwise specified.

NOTICE TO APPLICANTS

In the Town of North Castle, the Planning Board is responsible for the review and approval of all applications concerning site plans, subdivisions and lot line changes; some applications concerning special use permits, wetlands permits and tree removal permits; and the environmental review of those applications over which it has jurisdiction. The Planning Board may also have an advisory role in connection with some applications before the Town Board, such as those involving other categories of special use permits and zoning amendments.

The Planning Board is composed of five volunteer members – all residents of North Castle – who are appointed by the Town Board for five-year terms. As part of the review of some applications, the Planning Board is assisted on an as-needed basis by other lay boards of the Town, such as the Conservation Board (CB), the Zoning Board of Appeals (ZBA), the Open Space Committee and the Architectural Review Board (ARB). As part of the review of most applications, the Planning Board is also assisted by the Director of Planning, the Town Engineer, the Town Attorney and other special consultants when required.

FEES:

If you submit an application for Planning Board review, you will be required to reimburse the Town for the cost of professional review services, including legal and engineering services, incurred in connection with the review of your application. The charges for professional planning review services have been $120/hour. If other types of professional consultant review services are required, those charges will be in accord with fees usually charged for such services and pursuant to a contractual agreement between the Town and such professional.

At the time of submission of an application, the Planning Board will require the establishment of an escrow account from which withdrawals shall be made to reimburse the Town for the cost of consultant fees and professional staff services.

ESCROW ACCOUNT:

Escrow Accounts are established for each application. Monies will be deducted from the account for professional review services rendered. Monthly escrow disbursement summaries will be mailed for your reference regarding your project. When the balance in such escrow account is reduced to one-third (1/3) of its initial amount, a letter will be mailed to the applicant and the applicant shall deposit additional funds into such account to restore its balance to the amount of the initial deposit. Additional information on these requirements is provided in the North Castle Town Code (see Sections 355-79B and 275-36.C).

TOWN OF NORTH CASTLE

WESTCHESTER COUNTY
17 Bedford Road
Armonk, New York 10504-1898

PLANNING DEPARTMENT
Adam R. Kaufman, AICP
Director of Planning

Telephone: (914) 273-3542
Fax: (914) 273-3554
www.northcastleny.com

PROCEDURE:

Prior to submitting an application to the Planning Board for review and approval, prospective applicants should schedule an appointment with the Planning Board Secretary at (914) 273-3542 for a consultation with the Town Planner and the Town Engineer. When the appointment is made, a verbal description of the proposal should be provided to the Planning Board Secretary. The Town of North Castle is providing the services of the Director of Planning and the Town Engineer for ***initial*** consultation at no cost to the applicant so that it is possible to conduct the application review as efficiently as possible for the benefit of the applicant as well as the Planning Board.

After meeting with the Town Planner and Town Engineer, prospective applicants should prepare one complete set of application documents and plans. This set will be reviewed for completeness by the Town Planner. If determined to be incomplete, the Planning Department will submit a checklist indicating which items have not been adequately addressed. If determined to be complete, the checklist will be initialed and the Applicant should submit the remainder of the required application packages.

Once the checklist has been initialed and all application packages have been submitted, the Planning Board Secretary will schedule the application for the first available opening on the Planning Board's meeting agenda. However, if the required application material packages, including the pertinent application fee are not received at the Planning Board office by 12:00 PM, Monday, 14 days prior to the date of the Planning Board meeting at which you are scheduled to appear (or otherwise scheduled by the Planning Board Secretary), your application will be automatically removed from the agenda. At the discretion of the Planning Board Chairman, your application may be rescheduled, if appropriate, for the next available Planning Board meeting or the application may be removed from future agendas altogether. Additional requirements pertinent to each type of application are provided on the individual application forms, which you should carefully review prior to submitting your application.

When an application is deemed complete and submitted for review, it will be forwarded to the Planning Board Members and its professional advisors in advance of the meeting to allow adequate time for review, preparation of written reports and site inspections as necessary. Your application may also be forwarded to other boards and staff of the Town as well as to agencies outside of the Town, if required. Compliance with State Environmental Quality Review (SEQR) procedures is also required as part of the processing of all applications.

At your first appearance before the Planning Board, the Applicant will describe the project and the Planning Board will discuss any preliminary issues. The Planning Board discussion may be continued at future meetings, or if the Planning Board review has progressed sufficiently, the Application may be scheduled for a public hearing (if one is required) The public hearing may occur at a single Planning Board meeting, or it may be adjourned and continued at another Planning Board meeting. Because the nature and complexity of each application varies

TOWN OF NORTH CASTLE

Fax: (914) 273-3554
www.northcastleny.com

considerably, it is not possible to predict in advance the length of time needed to secure Planning Board approval. There are certain steps that you can take, however, to expedite the review process. These include, but are not limited to, the following:

- Be thoroughly familiar with the requirements pertinent to your application. Carefully review relevant provisions of the North Castle Town Code and the application form for your particular type of application. Be sure to check on what other types of approvals may be required in addition to that of the Planning Board. Approvals by other Town boards or departments as well as agencies outside of the Town may be required before you will be allowed to proceed with your project.

- Make sure that your application materials are accurately prepared and contain all required information. The information that we initially request is required, so make sure that your submission is complete. If supplementary information is requested as the review process continues, make sure that it is submitted in a timely fashion so the Planning Board can continue to move your application along.

- Follow up to make sure that your application materials are being submitted on time, or deliver them to the Planning office yourself.

- Attend the Planning Board meeting at which your application will be discussed and be on time for the meeting. If you cannot appear personally, make sure that your representative will be there and is thoroughly familiar with your application.

If the Application is approved by the Planning Board, a resolution of approval will be adopted by the Planning Board. It is the Applicant's responsibility to address any and all conditions of approval. Permits from the Building Department cannot be issued until all conditions have been addressed and the plans have been signed by the Planning Board Chair and the Town Engineer.

INFORMATION REGARDING PUBLIC HEARINGS

1. The North Castle Assessor's Office shall prepare a list of neighbors to be notified for the neighbor notifications and public hearings - **A minimum of one week's notice is required** . The fee is $50.00 which includes the list of neighbors and two sets of labels for mailing. The Assessor's Office may be reached Monday – Friday from 8:30 a.m.– 4:30 p.m. at 273-3324. You may also e-mail your request to assessor@northcastleny.com

When requesting your list please reference the list of application types below so that you can tell the Assessor's office how many feet on all sides of the property to create the list for.

Subdivisions - All lots zoned R-10, R-5 and R-2F shall notice all neighbors within 200 feet from all sides of their property. All other zoning districts shall notice neighbors within 500 feet from all sides of their property. Public hearing notice must be published in the newspaper.

Special Use Permit for Structures over 800 sq ft. & Accessory Apartment - All Zoning Districts shall notice all neighbors within 250 feet from all sides of their property. Public hearing notice must be published in the newspaper.

Site Plan, Non Residential - All Zoning Districts shall notice all neighbors within 250 feet from all sides of their property. Public hearing notice must be published in the newspaper.

Site Plan, Residential/ Neighbor Notification – All zoning districts R-3/4A or smaller shall notice all neighbors within 250' from all sides of their property. All zoning districts zoned R-1A or larger shall notice all neighbors within 500' from all sides of the property. No public hearing required, no publication in the newspaper required.

Wetlands Permit - All Zoning Districts shall notice all abutting property owners. Public hearing notice must be published in the newspaper.

2. The Director of Planning will prepare a Public Notice. The applicant and or professional will review, sign, date and return to the Planning Department Secretary. If there are any changes necessary, please edit and return for corrections. The corrections will be made and emailed back to the applicant who will forward it to the Journal Newspaper, when applicable.

If notification to the newspaper is not required, please continue to #3.

You may email your public notice to legals@lohud.com. Please request an affidavit of publication which must be submitted to the Planning Board secretary prior to the public hearing. The Journal News requires three days prior notice before 12 noon, not counting weekends and holidays, for ad placement. Make sure the notice placement of the ad in the Greater Westchester Area. This notice cannot be published any sooner than 20 days prior to the meeting and must be published no less than 10 days prior to the meeting.

If you have any questions regarding your publication you may call 888-516-9220:
Email Address: legals@lohud.com

It is suggested that you purchase the newspaper for your records the day the notice is published.

3. Send out the Public Hearing Notice/ Neighbor Notification by First Class Mail. Notice shall be mailed by the applicant in official envelopes provided by the North Castle Planning Department; the list of noticed neighbors will be prepared by the Assessor's Office. This must be sent out no less than 10 days prior to the meeting and no more than 20 days prior to the meeting date. A Certificate of Mailing (PS Form 3817 or 3877) shall be filled out and post marked by the Post Office on the day of mailing. Neighbor Notifications – no publication in the newspaper required.

4. The Friday before the meeting or no later than 12:00 p.m. the day of the meeting the following **must** be submitted.

- List of Neighbors prepared by the Assessor's Office
- Certificate of Mailing – PS form 3817 or 3877 post marked by the US Post Office
- Affidavit of publication from the Newspaper (only if published in the newspaper)

Bedford, NY 10506

Applicant Acknowledgement

By making this application, the undersigned Applicant agrees to permit Town officials and their designated representatives to conduct on-site inspections in connection with the review of this application.

The Applicant also agrees to pay all expenses for the cost of professional review services required for this application.

It is further acknowledged by the Applicant that all bills for the professional review services shall be mailed to the Applicant, unless the Town is notified in writing by the Applicant at the time of initial submission of the application that such mailings should be sent to a designated representative instead.

Signature of Applicant: _____ Date: 6/9/22
Chloe Gasiorowski

Signature of Property Owner: _____ Date: 6/9/22
Marengo Farms LLC, By Chloe Gasiorowski, Authorized Representative

MUST HAVE BOTH SIGNATURES

II. IDENTIFICATION OF SUBJECT PROPERTY

Street Address: 263 Bedford Banksville Rd.

Location (in relation to nearest intersecting street):

_____ feet (north, south, east or west) of Drive is 280 ft. South of Finch Lane

Abutting Street(s): Finch Lane

Tax Map Designation (NEW): Section 95 Block 03-2 Lot 56

Tax Map Designation (OLD): Section 1 Block 01 Lot 11A

Zoning District: R4A Total Land Area 21.624 AC.

Land Area in North Castle Only (if different) _____

Fire District(s) #3 School District(s) Byram Hill Central

Is any portion of subject property abutting or located within five hundred (500) feet of the following:

The boundary of any city, town or village?
No X Yes (adjacent) _____ Yes (within 500 feet) _____
If yes, please identify name(s): _____

The boundary of any existing or proposed County or State park or any other recreation area?
No ____ Yes (adjacent) X Yes (within 500 feet) _____

The right-of-way of any existing or proposed County or State parkway, thruway, expressway, road or highway?
No X Yes (adjacent) _____ Yes (within 500 feet) _____

The existing or proposed right-of-way of any stream or drainage channel owned by the County or for which the County has established channel lines?
No X Yes (adjacent) _____ Yes (within 500 feet) _____

The existing or proposed boundary of any county or State owned land on which a public building or institution is situated?
No X Yes (adjacent) _____ Yes (within 500 feet) _____

The boundary of a farm operation located in an agricultural district?
No X Yes (adjacent) _____ Yes (within 500 feet) _____

Does the Property Owner or Applicant have an interest in any abutting property?
No X Yes _____

If yes, please identify the tax map designation of that property:

_____

III. DESCRIPTION OF PROPOSED DEVELOPMENT

Type of Special Use Permit: Additional Horses

Accessory Apartment _____

Accessory Structure over 800 square feet _____

Gross Floor Area: Existing _____S.F. Proposed _____S.F.

Number of Parking Spaces: Existing _____ Proposed _____

Earthwork Balance: Cut _____ C.Y. Fill _____ C.Y. _____

Will Development on the subject property involve any of the following:

Areas of special flood hazard? No _____ Yes _X___
(If yes, application for a Development Permit pursuant to Chapter 177 of the North Castle Town Code may also be required) Portion in Flood Zone, no activity proposed in flood zone

Trees with a diameter at breast height (DBH) of 8" or greater?

No _____ Yes _X___
(If yes, application for a Tree Removal Permit pursuant to Chapter 308 of the North Castle Town Code may also be required.) Tree Permit Application in Process of preparation

Town-regulated wetlands? No _____ Yes _X___
(If yes, application for a Town Wetlands Permit pursuant to Chapter 340 of the North Castle Town Code may also be required.) No activity proposed in regulated area of State Wetlands

State-regulated wetlands? No _____ Yes _X___
(If yes, application for a State Wetlands Permit may also be required.)
No activity proposed in regulated area of State Wetlands

IV. SUBMISSION REQUIREMENTS

The site development plan application package shall include all materials submitted in support of the application, including but not limited to the application form, plans, reports, letters and SEQR Environmental Assessment Form. **Submission of the following shall be required:**

- One (1) set of the site development plan application package (for distribution to the Town Planner for preliminary review purposes).

- Once a completed preliminary site plan checklist has been received from the Planning Department, eight (8) additional sets of the site development plan application package (for distribution to Planning Board, Town Engineer, Town Attorney, Town Planner, Planning Board Secretary, police, fire department and ambulance corps).

- One (1) additional reduced sized set (11” x 17”) of the site development plan application package if any portion of the subject property abuts or is located within five hundred (500) feet of the features identified in Section II of this application form (for distribution to Westchester County Planning Board).

- A check for the required application fee and a check for the required Escrow Account, both made payable to "Town of North Castle" in the amount specified on the "Schedule of Application Fees."

(continued next page)

V. INFORMATION TO BE INCLUDED ON SITE DEVELOPMENT PLAN

The following checklist is provided to enable the Applicant to determine if he/she has provided enough information on the site development plan for the Planning Board to review his/her proposal. Applicants are advised to review ARTICLE VIII, Site Development Plan of the North Castle Town Code for a complete enumeration of pertinent requirements and standards prior to making application for site development plan approval.

The application for site development plan approval will not be accepted for Planning Board review unless all items identified below are supplied and **so indicated with a check mark in the blank line provided.** If a particular item is not relevant to the subject property or the development proposal, **the letters "NA" should be entered instead**. In addition, the project will not be scheduled on a Planning Board agenda until the Applicant receives an initialed "site plan checklist" from the Planning Department.

The information to be included on a site development plan shall include:

Legal Data:

_____ Name of the application or other identifying title.

_____ Name and address of the Property Owner and the Applicant, (if different).

_____ Name, address and telephone number of the architect, engineer or other legally qualified professional who prepared the plan.

_____ Names and locations of all owners of record of properties abutting and directly across any and all adjoining streets from the subject property, including the tax map designation of the subject property and abutting and adjoining properties, as shown on the latest tax records.

_____ Existing zoning, fire, school, special district and municipal boundaries.

_____ Size of the property to be developed, as well as property boundaries showing dimensions and bearings as determined by a current survey; dimensions of yards along all property lines; name and width of existing streets; and lines of existing lots, reservations, easements and areas dedicated to public use.

_____ Reference to the location and conditions of any covenants, easements or deed restrictions that cover all or any part of the property, as well as identification of the document where such covenants, easements or deed restrictions are legally established.

_____ Schedule of minimum zoning requirements, as well as the plan's proposed compliance with those requirements, including lot area, frontage, lot width, lot depth, lot coverage, yards, off-street parking, off-street loading and other pertinent requirements.

_____Locator map, at a convenient scale, showing the Applicant's entire property in relation to surrounding properties, streets, etc., within five hundred (500) feet of the site.

_____North arrow, written and graphic scales, and the date of the original plan and all revisions, with notation identifying the revisions.

_____ A signature block for Planning Board endorsement of approval.

Existing Conditions Data:

_____ Location of existing use and design of buildings, identifying first floor elevation, and other structures.

_____ Location of existing parking and truck loading areas, with access and egress drives thereto.

_____ Location of existing facilities for water supply, sanitary sewage disposal, storm water drainage, and gas and electric service, with pipe sizes, grades, rim and inverts, direction of flow, etc. indicated.

_____ Location of all other existing site improvements, including pavement, walks, curbing, retaining walls and fences.

_____ Location, size and design of existing signs.

_____ Location, type, direction, power and time of use of existing outdoor lighting.

_____ Location of existing outdoor storage, if any.

_____ Existing topographical contours with a vertical interval of two (2) feet or less.

_____ Location of existing floodplains, wetlands, slopes of 15% or greater, wooded areas, landscaped areas, single trees with a DBH of 8" or greater, rock outcrops, stone walls and any other significant existing natural or cultural features.

Proposed Development Data:

_____ Proposed location of lots, streets, and public areas, and property to be affected by proposed easements, deed restrictions and covenants.

_____ Proposed location, use and architectural design of all buildings, including proposed floor elevations and the proposed division of buildings into units of separate occupancy.

_____ Proposed means of vehicular and pedestrian access to and egress from the site onto adjacent streets.

_____ Proposed sight distance at all points of vehicular access.

_____ Proposed number of employees for which buildings are designed

_____ Proposed streets, with profiles indicating grading and cross-sections showing the width of the roadway; the location and width of sidewalks; and the location and size of utility lines.

_____ Proposed location and design of any pedestrian circulation on the site and off-street parking and loading areas, including handicapped parking and ramps, and including details of construction, surface materials, pavement markings and directional signage.

_____ Proposed location and design of facilities for water supply, sanitary sewage disposal, storm water drainage, and gas and electric service, with pipe sizes, grades, rim and inverts, direction of flow, etc. indicated.

_____ Proposed location of all structures and other uses of land, such as walks, retaining walls, fences, designated open space and/or recreation areas and including details of design and construction.

_____ Location, size and design of all proposed signs.

_____ Location, type, direction, power and time of use of proposed outdoor lighting.

_____ Location and design of proposed outdoor garbage enclosure.

_____ Location of proposed outdoor storage, if any.

_____ Location of proposed landscaping and buffer screening areas, including the type (scientific and common names), size and amount of plantings.

_____ Type of power to be used for any manufacturing

_____ Type of wastes or by-products to be produced and disposal method

_____ In multi-family districts, floor plans, elevations and cross sections

_____ The proposed location, size, design and use of all temporary structures and storage areas to be used during the course of construction.

_____ Proposed grade elevations, clearly indicating how such grades will meet existing grades of adjacent properties or the street.

_____ Proposed soil erosion and sedimentation control measures.

_____ For all proposed site development plans containing land within an area of special flood hazard, the data required to ensure compliance with Chapter 177 of the North Castle Town Code.

_____ For all proposed site development plans involving clearing or removal of trees with a DBH of 8" or greater, the data required to ensure compliance with Chapter 308 of the North Castle Town Code.

_____ For all proposed site development plans involving disturbance to Town-regulated wetlands, the data required to ensure compliance with Chapter 340 of the North Castle Town Code.

Short Environmental Assessment Form
Part 1 - Project Information

Instructions for Completing

Part 1 – Project Information. The applicant or project sponsor is responsible for the completion of Part 1. Responses become part of the application for approval or funding, are subject to public review, and may be subject to further verification. Complete Part 1 based on information currently available. If additional research or investigation would be needed to fully respond to any item, please answer as thoroughly as possible based on current information.

Complete all items in Part 1. You may also provide any additional information which you believe will be needed by or useful to the lead agency; attach additional pages as necessary to supplement any item.

Part 1 – Project and Sponsor Information

Name of Action or Project:
Chloe and Mikhail Gasiorski

Project Location (describe, and attach a location map):
263 Bedford-Banksville Road, North Castle, NY

Brief Description of Proposed Action:
Redevelopment of existing Single-Family Residence with Additional Horses per Special Permit, Article VII, Section 355-40 of the Town of North Castle Zoning Regulations - 20 horses. Servants Quarters per Special Permit, Article VII, Section 355-40K.

Name of Applicant or Sponsor:	Telephone: 347-853-6073
Chloe and Mikhail Gasiorski	E-Mail: cnicol@algondonadvisors.com

Address:
48 Davids Way

City/PO:	State:	Zip Code:
Bedford Hills	NY	10507

	NO	YES
1. Does the proposed action only involve the legislative adoption of a plan, local law, ordinance, administrative rule, or regulation? If Yes, attach a narrative description of the intent of the proposed action and the environmental resources that may be affected in the municipality and proceed to Part 2. If no, continue to question 2.	☑	☐
2. Does the proposed action require a permit, approval or funding from any other government Agency? If Yes, list agency(s) name and permit or approval: Planning Board Site Plan Approval, Town Board Special Permit, Building Permit, ARB Approval	☐	☑

3. a. Total acreage of the site of the proposed action? 21.62 acres
   b. Total acreage to be physically disturbed? _____ acres
   c. Total acreage (project site and any contiguous properties) owned or controlled by the applicant or project sponsor? 21.62 acres

4. Check all land uses that occur on, are adjoining or near the proposed action:

5. ☑ Urban ☐ Rural (non-agriculture) ☐ Industrial ☐ Commercial ☑ Residential (suburban)
   ☑ Forest ☑ Agriculture ☐ Aquatic ☐ Other(Specify):
   ☑ Parkland

	NO	YES	N/A
5. Is the proposed action,			
a. A permitted use under the zoning regulations?	☐	☑	☐
b. Consistent with the adopted comprehensive plan?	☐	☑	☐

	NO	YES
6. Is the proposed action consistent with the predominant character of the existing built or natural landscape?	☐	☑

	NO	YES
7. Is the site of the proposed action located in, or does it adjoin, a state listed Critical Environmental Area?		
If Yes, identify: Name:Mianus River, Reason:Exceptional or unique character, Agency:Westchester County, Date:1-31-90	☐	☑

	NO	YES
8. a. Will the proposed action result in a substantial increase in traffic above present levels?	☑	☐
b. Are public transportation services available at or near the site of the proposed action?	☑	☐
c. Are any pedestrian accommodations or bicycle routes available on or near the site of the proposed action?	☑	☐

	NO	YES
9. Does the proposed action meet or exceed the state energy code requirements?		
If the proposed action will exceed requirements, describe design features and technologies:		
Upgrade/rebuild of existing residence and buildings to conform with current energy codes will result in significant decrease in energy consumption.	☐	☑

	NO	YES
10. Will the proposed action connect to an existing public/private water supply?		
If No, describe method for providing potable water:		
On-site private well(s)	☑	☐

	NO	YES
11. Will the proposed action connect to existing wastewater utilities?		
If No, describe method for providing wastewater treatment:		
On-site sub-surface sewage disposal system.	☑	☐

	NO	YES
12. a. Does the project site contain, or is it substantially contiguous to, a building, archaeological site, or district which is listed on the National or State Register of Historic Places, or that has been determined by the Commissioner of the NYS Office of Parks, Recreation and Historic Preservation to be eligible for listing on the State Register of Historic Places?	☑	☐
b. Is the project site, or any portion of it, located in or adjacent to an area designated as sensitive for archaeological sites on the NY State Historic Preservation Office (SHPO) archaeological site inventory?	☐	☑

	NO	YES
13. a. Does any portion of the site of the proposed action, or lands adjoining the proposed action, contain wetlands or other waterbodies regulated by a federal, state or local agency?	☐	☑
b. Would the proposed action physically alter, or encroach into, any existing wetland or waterbody?	☑	☐
If Yes, identify the wetland or waterbody and extent of alterations in square feet or acres: NYS DEC Wetland K-29 is found on and adjacent to site - no disturbance to wetland or adjacent area proposed.		

14. Identify the typical habitat types that occur on, or are likely to be found on the project site. Check all that apply:

☐ Shoreline ☑ Forest ☑ Agricultural/grasslands ☑ Early mid-successional

☑ Wetland ☐ Urban ☐ Suburban

	NO	YES
15. Does the site of the proposed action contain any species of animal, or associated habitats, listed by the State or Federal government as threatened or endangered?	☑	☐
16. Is the project site located in the 100-year flood plan?	☐	☑
17. Will the proposed action create storm water discharge, either from point or non-point sources?	☑	☐
If Yes,		
a. Will storm water discharges flow to adjacent properties?	☑	☐
b. Will storm water discharges be directed to established conveyance systems (runoff and storm drains)?	☐	☑
If Yes, briefly describe:		
A SWPPP will be developed in accordance with NYS regulations. All storm water will be treated prior to discharge and all discharge will be directed to infiltration BMP's. Storm water from existing drive is conveyed to catch basin located in Bedford-Banksville Roadd		
18. Does the proposed action include construction or other activities that would result in the impoundment of water or other liquids (e.g., retention pond, waste lagoon, dam)?	☑	☐
If Yes, explain the purpose and size of the impoundment:		
19. Has the site of the proposed action or an adjoining property been the location of an active or closed solid waste management facility?	☑	☐
If Yes, describe:		
20.Has the site of the proposed action or an adjoining property been the subject of remediation (ongoing or completed) for hazardous waste?	☑	☐
If Yes, describe:

Important General Information

- Prior to submitting an application, the "Notice to Applicants" should be reviewed.

- To appear before the Planning Board, all required application materials shall be submitted not later than **12:00 P.M., Monday, fourteen (14) days** prior to the date of the Planning Board meeting at which the application is scheduled to be heard or as otherwise noted by the Planning Board Secretary. Continuing Business can be submitted 12 days prior to the Next Planning Board meeting by the close of business. Except where noted.

  If all required application materials, including the pertinent application fee and escrow monies are not submitted by that deadline, the application shall be automatically removed from the agenda.

  At the discretion of the Planning Board Chairman, the application may be rescheduled, if appropriate, for the next available Planning Board meeting or the application may be removed from future agendas altogether. Without prior authorization from the Planning Board, application submissions shall not be accepted at Planning Board meetings.

- At the time of submission, all required application materials shall be submitted. **Piecemeal** submissions **shall not** be accepted. Substitution of previously submitted materials shall not be permitted.

- All submissions shall be dated, with revision dates identified on new submissions.

- All submissions shall be accompanied by a cover letter describing the project and/or any changes as compared to previous submissions.

- For distribution purposes and mailing to the Planning Board Members and others (as required), multiple copies of application materials shall be collated into separate sets, each containing one copy of every submitted document. All application materials shall be submitted in a form that fits into a **12" x 17" envelope.** Plans shall be **folded** and **rubber banded** as necessary.

- To be considered complete for Planning Board hearing purposes, an application package shall contain the information identified in Parts IV and V of this application form.

- For purposes of completing this application form, all responses provided shall be printed, except as otherwise specified.

NOTICE TO APPLICANTS

In the Town of North Castle, the Planning Board is responsible for the review and approval of all applications concerning site plans, subdivisions and lot line changes; some applications concerning special use permits, wetlands permits and tree removal permits; and the environmental review of those applications over which it has jurisdiction. The Planning Board may also have an advisory role in connection with some applications before the Town Board, such as those involving other categories of special use permits and zoning amendments.

The Planning Board is composed of five volunteer members – all residents of North Castle – who are appointed by the Town Board for five-year terms. As part of the review of some applications, the Planning Board is assisted on an as-needed basis by other lay boards of the Town, such as the Conservation Board (CB), the Zoning Board of Appeals (ZBA), the Open Space Committee and the Architectural Review Board (ARB). As part of the review of most applications, the Planning Board is also assisted by the Director of Planning, the Town Engineer, the Town Attorney and other special consultants when required.

FEES:

If you submit an application for Planning Board review, you will be required to reimburse the Town for the cost of professional review services, including legal and engineering services, incurred in connection with the review of your application. The charges for professional planning review services have been $120/hour. If other types of professional consultant review services are required, those charges will be in accord with fees usually charged for such services and pursuant to a contractual agreement between the Town and such professional.

At the time of submission of an application, the Planning Board will require the establishment of an escrow account from which withdrawals shall be made to reimburse the Town for the cost of consultant fees and professional staff services.

ESCROW ACCOUNT:

Escrow Accounts are established for each application. Monies will be deducted from the account for professional review services rendered. Monthly escrow disbursement summaries will be mailed for your reference regarding your project. When the balance in such escrow account is reduced to one-third (1/3) of its initial amount, a letter will be mailed to the applicant and the applicant shall deposit additional funds into such account to restore its balance to the amount of the initial deposit. Additional information on these requirements is provided in the North Castle Town Code (see Sections 355-79B and 275-36.C).

TOWN OF NORTH CASTLE

WESTCHESTER COUNTY

PLANNING DEPARTMENT
Adam R. Kaufman, AICP
Director of Planning

Telephone: (914) 273-3542
Fax: (914) 273-3554
www.northcastleny.com

PROCEDURE:

Prior to submitting an application to the Planning Board for review and approval, prospective applicants should schedule an appointment with the Planning Board Secretary at (914) 273-3542 for a consultation with the Town Planner and the Town Engineer. When the appointment is made, a verbal description of the proposal should be provided to the Planning Board Secretary. The Town of North Castle is providing the services of the Director of Planning and the Town Engineer for ***initial*** consultation at no cost to the applicant so that it is possible to conduct the application review as efficiently as possible for the benefit of the applicant as well as the Planning Board.

After meeting with the Town Planner and Town Engineer, prospective applicants should prepare one complete set of application documents and plans. This set will be reviewed for completeness by the Town Planner. If determined to be incomplete, the Planning Department will submit a checklist indicating which items have not been adequately addressed. If determined to be complete, the checklist will be initialed and the Applicant should submit the remainder of the required application packages.

Once the checklist has been initialed and all application packages have been submitted, the Planning Board Secretary will schedule the application for the first available opening on the Planning Board's meeting agenda. However, if the required application material packages, including the pertinent application fee are not received at the Planning Board office by 12:00 PM, Monday, 14 days prior to the date of the Planning Board meeting at which you are scheduled to appear (or otherwise scheduled by the Planning Board Secretary), your application will be automatically removed from the agenda. At the discretion of the Planning Board Chairman, your application may be rescheduled, if appropriate, for the next available Planning Board meeting or the application may be removed from future agendas altogether. Additional requirements pertinent to each type of application are provided on the individual application forms, which you should carefully review prior to submitting your application.

When an application is deemed complete and submitted for review, it will be forwarded to the Planning Board Members and its professional advisors in advance of the meeting to allow adequate time for review, preparation of written reports and site inspections as necessary. Your application may also be forwarded to other boards and staff of the Town as well as to agencies outside of the Town, if required. Compliance with State Environmental Quality Review (SEQR) procedures is also required as part of the processing of all applications.

At your first appearance before the Planning Board, the Applicant will describe the project and the Planning Board will discuss any preliminary issues. The Planning Board discussion may be continued at future meetings, or if the Planning Board review has progressed sufficiently, the Application may be scheduled for a public hearing (if one is required) The public hearing may occur at a single Planning Board meeting, or it may be adjourned and continued at another Planning Board meeting. Because the nature and complexity of each application varies

TOWN OF NORTH CASTLE

Fax: (914) 273-3554
www.northcastleny.com

considerably, it is not possible to predict in advance the length of time needed to secure Planning Board approval. There are certain steps that you can take, however, to expedite the review process. These include, but are not limited to, the following:

- Be thoroughly familiar with the requirements pertinent to your application. Carefully review relevant provisions of the North Castle Town Code and the application form for your particular type of application. Be sure to check on what other types of approvals may be required in addition to that of the Planning Board. Approvals by other Town boards or departments as well as agencies outside of the Town may be required before you will be allowed to proceed with your project.

- Make sure that your application materials are accurately prepared and contain all required information. The information that we initially request is required, so make sure that your submission is complete. If supplementary information is requested as the review process continues, make sure that it is submitted in a timely fashion so the Planning Board can continue to move your application along.

- Follow up to make sure that your application materials are being submitted on time, or deliver them to the Planning office yourself.

- Attend the Planning Board meeting at which your application will be discussed and be on time for the meeting. If you cannot appear personally, make sure that your representative will be there and is thoroughly familiar with your application.

If the Application is approved by the Planning Board, a resolution of approval will be adopted by the Planning Board. It is the Applicant's responsibility to address any and all conditions of approval. Permits from the Building Department cannot be issued until all conditions have been addressed and the plans have been signed by the Planning Board Chair and the Town Engineer.

INFORMATION REGARDING PUBLIC HEARINGS

1. The North Castle Assessor's Office shall prepare a list of neighbors to be notified for the neighbor notifications and public hearings - **A minimum of one week's notice is required** . The fee is $50.00 which includes the list of neighbors and two sets of labels for mailing. The Assessor's Office may be reached Monday – Friday from 8:30 a.m.– 4:30 p.m. at 273-3324. You may also e-mail your request to assessor@northcastleny.com

When requesting your list please reference the list of application types below so that you can tell the Assessor's office how many feet on all sides of the property to create the list for.

Subdivisions - All lots zoned R-10, R-5 and R-2F shall notice all neighbors within 200 feet from all sides of their property. All other zoning districts shall notice neighbors within 500 feet from all sides of their property. Public hearing notice must be published in the newspaper.

Special Use Permit for Structures over 800 sq ft. & Accessory Apartment - All Zoning Districts shall notice all neighbors within 250 feet from all sides of their property. Public hearing notice must be published in the newspaper.

Site Plan, Non Residential - All Zoning Districts shall notice all neighbors within 250 feet from all sides of their property. Public hearing notice must be published in the newspaper.

Site Plan, Residential/ Neighbor Notification – All zoning districts R-3/4A or smaller shall notice all neighbors within 250' from all sides of their property. All zoning districts zoned R-1A or larger shall notice all neighbors within 500' from all sides of the property. No public hearing required, no publication in the newspaper required.

Wetlands Permit - All Zoning Districts shall notice all abutting property owners. Public hearing notice must be published in the newspaper.

2. The Director of Planning will prepare a Public Notice. The applicant and or professional will review, sign, date and return to the Planning Department Secretary. If there are any changes necessary, please edit and return for corrections. The corrections will be made and emailed back to the applicant who will forward it to the Journal Newspaper, when applicable.

If notification to the newspaper is not required, please continue to #3.

PLANNING BOARD SCHEDULE OF ESCROW ACCOUNT DEPOSITS

Type of Application Deposit*	Amount of Initial Escrow Account
Concept Study	$500.00
Site Plan Waiver for Change of Use	$500.00
Site Development Plan for:	
Multifamily Developments	$3,000.00 plus $100.00 per proposed dwelling unit
Commercial Developments	$3,000.00 plus $50.00 for each required parking space
1 or 2 Family Projects	$2,000.00
Special Use Permit	$2,000.00 plus $50.00 for each required parking space
Subdivision:	
Lot Line Change resulting in no new lots	$1,500.00
All Others	$3,000.00 plus $200.00 per proposed new lot in excess of two (2)
Preparation or Review of Environmental Impact Statement	$15,000.00

* If a proposed action involves multiple approvals, a single escrow account will be established. The total amount of the initial deposit shall be the sum of the individual amounts indicated. When the balance in such escrow account is reduced to one-third (1/3) of its initial amount, the applicant shall deposit additional funds into such account to restore its balance to the amount of the initial deposit.

II. IDENTIFICATION OF SUBJECT PROPERTY

Street Address: 263 Bedford Banksville Rd.

Location (in relation to nearest intersecting street):

_____ feet (north, south, east or west) of Drive is 280 ft. South of Finch Lane

Abutting Street(s): Finch Lane

Tax Map Designation (NEW): Section 95 Block 03-2 Lot 56

Tax Map Designation (OLD): Section 1 Block 01 Lot 11A

Zoning District: R4A Total Land Area 21.624 AC.

Land Area in North Castle Only (if different) _____

Fire District(s) #3 School District(s) Byram Hill Central

Is any portion of subject property abutting or located within five hundred (500) feet of the following:

The boundary of any city, town or village?
No X Yes (adjacent) _____ Yes (within 500 feet) _____
If yes, please identify name(s): _____

The boundary of any existing or proposed County or State park or any other recreation area?
No ____ Yes (adjacent) X Yes (within 500 feet) _____

The right-of-way of any existing or proposed County or State parkway, thruway, expressway, road or highway?
No X Yes (adjacent) _____ Yes (within 500 feet) _____

The existing or proposed right-of-way of any stream or drainage channel owned by the County or for which the County has established channel lines?
No X Yes (adjacent) _____ Yes (within 500 feet) _____

The existing or proposed boundary of any county or State owned land on which a public building or institution is situated?
No X Yes (adjacent) _____ Yes (within 500 feet) _____

The boundary of a farm operation located in an agricultural district?
No X Yes (adjacent) _____ Yes (within 500 feet) _____

Does the Property Owner or Applicant have an interest in any abutting property?
No X Yes _____

If yes, please identify the tax map designation of that property:

_____

III. DESCRIPTION OF PROPOSED DEVELOPMENT

Type of Special Use Permit: Additional Horses

Accessory Apartment _____

Accessory Structure over 800 square feet _____

Gross Floor Area: Existing _____S.F. Proposed _____S.F.

Number of Parking Spaces: Existing _____ Proposed _____

Earthwork Balance: Cut _____ C.Y. Fill _____ C.Y. _____

Will Development on the subject property involve any of the following:

Areas of special flood hazard? No _____ Yes X
(If yes, application for a Development Permit pursuant to Chapter 177 of the North Castle Town Code may also be required) Portion in Flood Zone, no activity proposed in flood zone

Trees with a diameter at breast height (DBH) of 8" or greater?

No _____ Yes X
(If yes, application for a Tree Removal Permit pursuant to Chapter 308 of the North Castle Town Code may also be required.) Tree Permit Application in Process of preparation

Town-regulated wetlands? No _____ Yes X
(If yes, application for a Town Wetlands Permit pursuant to Chapter 340 of the North Castle Town Code may also be required.) No activity proposed in regulated area of State Wetlands

State-regulated wetlands? No _____ Yes X
(If yes, application for a State Wetlands Permit may also be required.)
No activity proposed in regulated area of State Wetlands

IV. SUBMISSION REQUIREMENTS

The special use permit application package shall include all materials submitted in support of the application, including but not limited to the application form, plans, reports, letters and SEQR Environmental Assessment Form. **Submission of the following shall be required:**

- One (1) set of the special use permit application package (for distribution to the Town Planner for preliminary review purposes).

- Once a completed preliminary special use permit checklist has been received from the Planning Department, eight (8) additional sets of the site development plan application package (for distribution to Planning Board, Town Engineer, Town Attorney, Town Planner, Planning Board Secretary, police, fire department and ambulance corps).

- One (1) additional reduced sized set (11” x 17”) of the special use permit application package if any portion of the subject property abuts or is located within five hundred (500) feet of the features identified in Section II of this application form (for distribution to Westchester County Planning Board).

- A check for the required application fee and a check for the required Escrow Account, both made payable to "Town of North Castle" in the amount specified on the "Schedule of Application Fees."

(continued next page)

V. INFORMATION TO BE INCLUDED ON SPECIAL USE PERMIT SITE PLAN

The following checklist is provided to enable the Applicant to determine if he/she has provided enough information on the special use permit plan for the Planning Board to review his/her proposal. Applicants are advised to review Chapter 355 Article VII of the North Castle Town Code for a complete enumeration of pertinent requirements and standards prior to making application for special use permit approval.

The application for special use permit approval will not be accepted for Planning Board review unless all items identified below are supplied and **so indicated with a check mark in the blank line provided.** If a particular item is not relevant to the subject property or the development proposal, **the letters "NA" should be entered instead**.

The information to be included on a site development plan shall include:

Legal Data:

_____ Name of the application or other identifying title.

_____ Name and address of the Property Owner and the Applicant, (if different).

_____ Name, address and telephone number of the architect, engineer or other legally qualified professional who prepared the plan.

_____ Names and locations of all owners of record of properties abutting and directly across any and all adjoining streets from the subject property, including the tax map designation of the subject property and abutting and adjoining properties, as shown on the latest tax records.

_____ Existing zoning, fire, school, special district and municipal boundaries.

_____ Size of the property to be developed, as well as property boundaries showing dimensions and bearings as determined by a current survey; dimensions of yards along all property lines; name and width of existing streets; and lines of existing lots, reservations, easements and areas dedicated to public use.

_____ Reference to the location and conditions of any covenants, easements or deed restrictions that cover all or any part of the property, as well as identification of the document where such covenants, easements or deed restrictions are legally established.

_____ Schedule of minimum zoning requirements, as well as the plan's proposed compliance with those requirements, including lot area, frontage, lot width, lot depth, lot coverage, yards, off-street parking, off-street loading and other pertinent requirements.

_____Locator map, at a convenient scale, showing the Applicant's entire property in relation to surrounding properties, streets, etc., within five hundred (500) feet of the site.

_____North arrow, written and graphic scales, and the date of the original plan and all revisions, with notation identifying the revisions.

_____ A signature block for Planning Board endorsement of approval.

Existing Conditions Data:

_____ Location use and design of existing buildings, identifying first floor elevation, and other structures.

_____ Location of existing facilities for water supply, sanitary sewage disposal, storm water drainage, and gas and electric service, with pipe sizes, grades, rim and inverts, direction of flow, etc. indicated.

_____ Location of all other existing site improvements, including pavement, walks, curbing, retaining walls and fences.

_____ Location, type, direction, power and time of use of existing outdoor lighting.

_____ Existing topographical contours with a vertical interval of two (2) feet or less.

_____ Location of existing floodplains, wetlands, slopes of 15% or greater, wooded areas, landscaped areas, single trees with a DBH of 8" or greater, rock outcrops, stone walls and any other significant existing natural or cultural features.

Proposed Development Data:

_____ Proposed location of lots, streets, and public areas, and property to be affected by proposed easements, deed restrictions and covenants.

_____ Proposed location, use and architectural design of all buildings, including proposed floor plans and elevations.

_____ Proposed means of vehicular and pedestrian access to and egress from the site onto adjacent streets.

_____ Proposed sight distance at all points of vehicular access.

_____ Proposed streets, with profiles indicating grading and cross-sections showing the width of the roadway; the location and width of sidewalks; and the location and size of utility lines.

_____ Proposed location and design of any pedestrian circulation on the site and off-street parking and loading areas, including handicapped parking and ramps, and including details of construction, surface materials, pavement markings and directional signage.

_____ Proposed location and design of facilities for water supply, sanitary sewage disposal, storm water drainage, and gas and electric service, with pipe sizes, grades, rim and inverts, direction of flow, etc. indicated.

_____ Proposed location of all structures and other uses of land, such as walks, retaining walls, fences, designated open space and/or recreation areas and including details of design and construction.

_____ Location, type, direction, power and time of use of proposed outdoor lighting.

_____ Location of proposed landscaping and buffer screening areas, including the type (scientific and common names), size and amount of plantings.

_____ The proposed location, size, design and use of all temporary structures and storage areas to be used during the course of construction.

_____ Proposed grade elevations, clearly indicating how such grades will meet existing grades of adjacent properties or the street.

_____ Proposed soil erosion and sedimentation control measures.

_____ For all proposed plans containing land within an area of special flood hazard, the data required to ensure compliance with Chapter 177 of the North Castle Town Code.

_____ For all proposed plans involving clearing or removal of trees with a DBH of 8" or greater, the data required to ensure compliance with Chapter 308 of the North Castle Town Code.

_____ For all proposed plans involving disturbance to Town-regulated wetlands, the data required to ensure compliance with Chapter 340 of the North Castle Town Code.

The special use permit application package shall also include a narrative document that demonstrates compliance with the following:

_____ The location and size of the use, the nature and intensity of the operations involved in it or conducted in connection with it, the size of the site in relation to it and the location of the site with respect to streets giving access to it are such that it will be in harmony with the appropriate and orderly development of the district in which it is located and that it complies with all special requirements for such use.

_____ The location, nature and height of buildings, walls, fences and the nature and extent of existing or proposed plantings on the site are such that the use will not hinder or discourage the appropriate development and use of adjacent land and buildings.

_____ Operations in connection with any special use will not be more objectionable to nearby properties by reason of noise, fumes, vibration or other characteristics than would be the operations of any permitted uses not requiring a special permit.

_____ Parking areas will be of adequate size for the particular use, properly located and suitably screened from adjoining residential uses, and the entrance and exit drives shall be laid out so as to achieve maximum convenience and safety.

_____ Where required, The provisions of the Town Flood Hazard Ordinance shall be met.

_____ The proposed special permit use will not have a significant adverse effect on the environment.

Short Environmental Assessment Form
Part 1 - Project Information

Instructions for Completing

Part 1 – Project Information. The applicant or project sponsor is responsible for the completion of Part 1. Responses become part of the application for approval or funding, are subject to public review, and may be subject to further verification. Complete Part 1 based on information currently available. If additional research or investigation would be needed to fully respond to any item, please answer as thoroughly as possible based on current information.

Complete all items in Part 1. You may also provide any additional information which you believe will be needed by or useful to the lead agency; attach additional pages as necessary to supplement any item.

Part 1 – Project and Sponsor Information

Name of Action or Project:
Chloe and Mikhail Gasiorski

Project Location (describe, and attach a location map):
263 Bedford-Banksville Road, North Castle, NY

Brief Description of Proposed Action:
Redevelopment of existing Single-Family Residence with Additional Horses per Special Permit, Article VII, Section 355-40 of the Town of North Castle Zoning Regulations - 20 horses. Servants Quarters per Special Permit, Article VII, Section 355-40K.

Name of Applicant or Sponsor:	Telephone: 347-853-6073
Chloe and Mikhail Gasiorski	E-Mail: cnicol@algondonadvisors.com

Address:
48 Davids Way

City/PO:	State:	Zip Code:
Bedford Hills	NY	10507

	NO	YES
1. Does the proposed action only involve the legislative adoption of a plan, local law, ordinance, administrative rule, or regulation? If Yes, attach a narrative description of the intent of the proposed action and the environmental resources that may be affected in the municipality and proceed to Part 2. If no, continue to question 2.	☑	☐
2. Does the proposed action require a permit, approval or funding from any other government Agency? If Yes, list agency(s) name and permit or approval: Planning Board Site Plan Approval, Town Board Special Permit, Building Permit, ARB Approval	☐	☑

3. a. Total acreage of the site of the proposed action? 21.62 acres
   b. Total acreage to be physically disturbed? _____ acres
   c. Total acreage (project site and any contiguous properties) owned or controlled by the applicant or project sponsor? 21.62 acres

4. Check all land uses that occur on, are adjoining or near the proposed action:

5. ☑ Urban ☐ Rural (non-agriculture) ☐ Industrial ☐ Commercial ☑ Residential (suburban)
   ☑ Forest ☑ Agriculture ☐ Aquatic ☐ Other(Specify):
   ☑ Parkland

	NO	YES	N/A
5. Is the proposed action,			
a. A permitted use under the zoning regulations?	☐	☑	☐
b. Consistent with the adopted comprehensive plan?	☐	☑	☐
6. Is the proposed action consistent with the predominant character of the existing built or natural landscape?	NO ☐	YES ☑	
7. Is the site of the proposed action located in, or does it adjoin, a state listed Critical Environmental Area? If Yes, identify: Name:Mianus River, Reason:Exceptional or unique character, Agency:Westchester County, Date:1-31-90	NO ☐	YES ☑	
8. a. Will the proposed action result in a substantial increase in traffic above present levels?	NO ☑	YES ☐	
b. Are public transportation services available at or near the site of the proposed action?	☑	☐	
c. Are any pedestrian accommodations or bicycle routes available on or near the site of the proposed action?	☑	☐	
9. Does the proposed action meet or exceed the state energy code requirements? If the proposed action will exceed requirements, describe design features and technologies: Upgrade/rebuild of existing residence and buildings to conform with current energy codes will result in significant decrease in energy consumption.	NO ☐	YES ☑	
10. Will the proposed action connect to an existing public/private water supply? If No, describe method for providing potable water: On-site private well(s)	NO ☑	YES ☐	
11. Will the proposed action connect to existing wastewater utilities? If No, describe method for providing wastewater treatment: On-site sub-surface sewage disposal system.	NO ☑	YES ☐	
12. a. Does the project site contain, or is it substantially contiguous to, a building, archaeological site, or district which is listed on the National or State Register of Historic Places, or that has been determined by the Commissioner of the NYS Office of Parks, Recreation and Historic Preservation to be eligible for listing on the State Register of Historic Places?	NO ☑	YES ☐	
b. Is the project site, or any portion of it, located in or adjacent to an area designated as sensitive for archaeological sites on the NY State Historic Preservation Office (SHPO) archaeological site inventory?	☐	☑	
13. a. Does any portion of the site of the proposed action, or lands adjoining the proposed action, contain wetlands or other waterbodies regulated by a federal, state or local agency?	NO ☐	YES ☑	
b. Would the proposed action physically alter, or encroach into, any existing wetland or waterbody?	☑	☐	
If Yes, identify the wetland or waterbody and extent of alterations in square feet or acres: NYS DEC Wetland K-29 is found on and adjacent to site - no disturbance to wetland or adjacent area proposed.			

14. Identify the typical habitat types that occur on, or are likely to be found on the project site. Check all that apply:

☐ Shoreline ☑ Forest ☑ Agricultural/grasslands ☑ Early mid-successional

☑ Wetland ☐ Urban ☐ Suburban

	NO	YES
15. Does the site of the proposed action contain any species of animal, or associated habitats, listed by the State or Federal government as threatened or endangered?	☑	☐
16. Is the project site located in the 100-year flood plan?	☐	☑
17. Will the proposed action create storm water discharge, either from point or non-point sources?	☑	☐
If Yes,		
a. Will storm water discharges flow to adjacent properties?	☑	☐
b. Will storm water discharges be directed to established conveyance systems (runoff and storm drains)?	☐	☑
If Yes, briefly describe:		
A SWPPP will be developed in accordance with NYS regulations. All storm water will be treated prior to discharge and all discharge will be directed to infiltration BMP's. Storm water from existing drive is conveyed to catch basin located in Bedford-Banksville Roadd		
18. Does the proposed action include construction or other activities that would result in the impoundment of water or other liquids (e.g., retention pond, waste lagoon, dam)?	☑	☐
If Yes, explain the purpose and size of the impoundment:		
19. Has the site of the proposed action or an adjoining property been the location of an active or closed solid waste management facility?	☑	☐
If Yes, describe:		
20.Has the site of the proposed action or an adjoining property been the subject of remediation (ongoing or completed) for hazardous waste?	☑	☐
If Yes, describe:

Special Use Application – Additional Horses
263 Bedford Banksville Road
North Castle, NY

Introduction

The following narrative was prepared as a Site Use and Zoning Evaluation in conformance with Chapter 355, Article VII Section 355-34 and Section 355-40 D. of the Town of North Castle Zoning Ordinance. Chapter 355, Section VII pertains to the procedures and standards for the processing of special permits. In addition, this narrative will serve as an expanded *Short Environmental Assessment Form* to address the environmental features and constraints to the 263 Bedford-Banksville Road site including soils, slopes, wetlands, watercourses, floodplains, trees, Critical Environmental Areas, and archaeological resources, found on or adjacent to the site. Land use history is briefly discussed as it pertains to the nature and extent of vegetation found on the site and as it relates to the current and proposed use. Finally, recommendation and guidelines for Horse Management are included in this narrative including pasture establishment and management, manure management and storage, food and bedding storage, rodent management, and storage and management of equine drugs and medicinal supplies.

The site was investigated by Wetland Scientists from Jay Fain and Associates in December 2020 and January & February 2021 to provide data for this analysis. In addition, resource information from the US Fish and Wildlife Service, NYS DEC Environmental Mapper, NYS DEC EAF Mapper, NRCS Web Soil Survey and Westchester County GIS were used as supplemental natural resource information sources.

Existing Conditions and Zoning

The 263 Bedford Banksville Road property is a 21.62- acre parcel located in the Town of North Castle. The property has legal frontage on the eastern property line along Bedford Banksville Road. The closest intersection is Finch Lane which is found immediately to the north but does not abut the property's northern property line. Surrounding land use includes single-family residential to the north, south and east and open space/parkland (Exhibit 1A & 1B) along the western property line.

The site is currently zoned R-4A. The current primary use under the zoning regulations is single family residential with an accessory use for additional horses, servants' quarters, a pool and pool house. The equine use pre-dates current zoning as is demonstrated by the Town Board Resolution dated November 30, 1972, which found that the construction of an indoor riding ring and recreational building was a permitted use under then Section 421 of the Residential Use Provision of the Zoning

Ordinance (Exhibit 2, Town Board Approval – Horse Use 11/1972). The accessory use has been continuous since the use was first established by Town Board Resolution in 1972. The current applicants, Chloe and Michal Gasiorowski, would like to continue the existing accessory horse use for twenty (20) horses, which is the number of horses for which there are currently stables on the property[i], and construct quarters for 4 grooms. Under current Special Permit provisions of the Zoning Ordinance (Section 355-40(D)), the number of horses allowed on property of its size is 23 (two horses permitted under existing primary use and an additional horse for each full acre), however, the current owners not seeking to expand the use and will maintain the status quo. Although the accessory use of the property has been continuous since 1972, maintenance on the property has been deferred and improvements are needed. The current zoning ordinance requires a Special Use Permit from the Town Board (Section 355-40 D) for additional horses and provides for additional standards and requirements for this accessory use. Approval will also be sought concurrently for a two-bedroom Servants' Quarters (Section 355-14A(2)). In addition, Site Plan Approval under Section 355-41 is required from the Planning Board.

The site is currently improved with a two-bedroom, one and half story wood frame residence (primary use), a steel framed indoor arena with attached stalls (12-14), not including wash stalls and feed rooms), two 4-stall free standing stables, a one-story storage shed, a 200 x 65-foot outdoor arena and approximately 3-acres of fenced paddocks. The remainder of the property is either wooded or old-field in various stages of succession. Sewage disposal is provided by an on-site SSDS and potable water is by on-site well(s).

The existing facilities are well worn and, in general, in need of upgrades, renovation or replacement. The applicant proposes the following improvements:

- Replace the existing two-bedroom primary residence with a five-bedroom frame structure designed by Teo Siguenza, Architect, for the applicant's family residence. The replacement structure will be a two-story wood frame building of traditional design and encompass approximately 5,000 sq ft. The new residence will be generally in the same location as the existing two-bedroom structure and will be well screened from surrounding residences. This facility will require installation of a new primary and the designation of a 100% reserve septic system. Potable water will be supplied by a new well. Existing testing has shown that ample area is available for the septic.
- A pool house (not exceeding 800 sf in area) and pool are proposed to the south of the new residence.
- Renovate the existing indoor riding arena. The existing structure will be repaired, and the number of stalls reduced to 10. The small bump-out on the southwest corner of the arena will be removed. SSDS facilities will be provided for a bathroom, utility room and laundry. Potable water will be supplied by a well. No living accommodations are proposed in this existing building.

- The two free standing stables (containing a total of 8 stalls) will be demolished and replaced with a new 10- stall barn to be constructed in proximity to the existing indoor ring and stalls. Sanitary facilities via on-site SSDS will be provided for wash stalls and sinks but no toilet facilities are proposed. Potable water will be supplied by well.
- The existing one and a half story wood frame shed will be demolished and a four-bedroom grooms' quarters/storage barn and garage will be constructed to replace it. Sanitary facilities will be provided by on-site SSDS and potable water will be provided by a central well.
- The existing 65 x 200-foot outdoor arena will be expanded in an east-west direction to be approximately 100 x 200 feet. There will be no lighting, sound system or mirrors associated with this facility. The ring will not be expanded towards the neighboring property to the south.
- The existing paddocks will be maintained and renovated or reconfigured, as necessary. Additional paddocks will be constructed in the southwestern quadrant of the property, maintaining a 150-landscape buffer from the adjacent Geist property. Paddocks are for exercise only and will not be used as a source of feed for the horses.
- A two-bedroom Servants' Quarters (AKA Caretakers Quarters) will be constructed to provide a domicile for the property manager and/or domestic staff. This residence will be provided with its own septic system and potable well.
- All other existing ancillary buildings will be removed.
- All overhead utilities will be replaced and located underground.

Access among the various improvements on the Property will be provided using existing paths.

An existing pond and grass path encircling it, in the northwest corner of the Property, will remain in their existing condition.

Site disturbance will not exceed 5 acres and therefore a waiver from this requirement will not be required from the NYS DEC. An SWPPP is being prepared to comply with the NYS DEC SPDES General Permit for Stormwater Discharge from Construction Activity. The location and construction of SSDS(s) and well(s) will be coordinated and permitted with the WCHD. A representative from the WCHD has witnessed septic testing on the site. Testing for stormwater management features has also been witnessed by a representative from the Town Engineers' Office.

Environmental Site Features

<u>Wetland Location and Determination</u>

The site was investigated for the presence of Regulated Wetlands on December 2, 2020, and on March 4, 2021, by Jay Fain, Certified Soils Scientist (Appendix 1). In North Castle, Wetlands are regulated under Chapter 340 – the town Wetland and Watercourse Protection Law -- and are defined

as “those areas that have a predominance of hydric soils and/or are inundated or saturated by surface water or groundwater at a frequency and duration sufficient to support, and under normal circumstances do support, a prevalence of hydrophytic vegetation typically adapted for life in saturated soil conditions. Wetlands possess three essential characteristics: hydrophytic vegetation, hydric soils, and wetland hydrology.

Wetlands were field marked with sequentially numbered orange surveyors’ tape and subsequently located by the project surveyor for inclusion on the property survey and plan sheets. The Town Wetland and Watercourse Law requires inspection and validation of the on-site wetland delineation by a representative of the Town Engineers’ office. Matt Norden, of Kellard/Sessions Consulting performed this inspection on June 18, 2021 and confirmed the extent and location of Town of North Castle jurisdictional wetlands on the subject property.

In New York State, certain wetlands (over 12.4 acres in size) are regulated by the NYS DEC under Article 24 of the Environmental Conservation Law. NYS Freshwater Wetlands are as shown on the freshwater wetlands map and the outer boundaries are generally defined by vegetation. On the 263 Bedford Banksville Road site, a portion of NYS DEC Wetland K-4 extends onto the site (Exhibit 2). The NYS DEC wetland is essentially the western edge of the east branch of the Mianus River. In accordance with NYS DEC regulations, the boundaries of the wetland must be confirmed by a representative of the NYS DEC. The NYS DEC representative, Josh Fisher, confirmed the location of the NYS DEC wetland boundary on June 8, 2021. Also, in accordance with NYS DEC regulations, a surveyed map of the wetlands along with the appropriate validation block signed by the NYS DEC representative is required. A copy of the signed map has been provided to the Town upon receipt by the applicant.

A wetland was also delineated in the northeast corner of the Property along a stream that originates and terminates off-site. This wetland is in the area of an existing paddock, which is not being modified as part of the project.

In accordance with the Town and State Wetland Protection Laws, a permit is required for any regulated activity within wetlands or the regulated adjacent area (generally 100 feet but up to 125 feet under Town Law if the adjacent area is located on steep slopes). The Applicant has taken great care to avoid any activity that would disturb wetlands or the adjacent area, and **no** wetland activity permit is sought or required for this action.

Trees

The removal of trees on residential private property is regulated under Chapter 308, Article II of the Town Code. In general, removal of any significant tree (greater than 24 inches DBH), or the removal of more than 10 trees, in any calendar year on any lot, requires a tree removal permit. Since Site Plan Approval is required, the Planning Board is the approving authority. Also, since other permits are involved, this matter is considered a major project.

Trees on the site in the proposed areas of disturbance (the "Development Envelope") were located and inventoried in the field by Jay Fain & Associates and subsequently survey-located by the project surveyor. All trees were given a distinct numerical identifier, identified by species, measured for DBH, and evaluated by canopy position and overall health and vigor. Of the 516 total number of trees identified within the Development Envelope, 497 trees will be removed. Of these 497 removal trees, 465, 90.1%, are Black Locust. (See Tree Survey Appendix 2)

The reason or rationale for the tree removal is two -fold. In the first instance, tree removal will be necessary to place the improvements proposed on the Property, especially the expanded dressage riding area and the proposed paddock areas. However, the primary reason for removal of most of the trees is for more pragmatic reasons. The 263 Bedford Banksville Road site is an old agricultural site which has been allowed to revert through the process of forest succession to a more wooded stage. In this instance, the dominant woody vegetation on the site is Black Locust (*Robinia pseudoacacia)*. Black Locust is an early successional species and often is one of the first plants to colonize old agricultural fields once they have been abandoned from regular agrarian use.

Black Locust, while native to the US, has been historically found east of the Mississippi and south of Pennsylvania. Over time, its range has expanded to the northeast, most likely because its wood was valued by farmers for its resistance to rot. In New York State, Black Locust is considered an invasive species and the NYS DEC has addressed this condition by adding Black Locust to its list of prohibited and regulated plants. Black Locust is considered an invasive, noxious plant because it colonizes old fields early and quickly outcompetes other more desirable native species that have higher ecological benefits such as food and habitat for wildlife (See Tree Survey Appendix 2, & Lower Hudson PRISM Report Attachment 1). Another drawback of Black Locust is that, as an early pioneer species, it grows quickly but is short lived. As it matures, the crown quickly declines and with shallow, limited root systems, these trees are problematic because they are susceptible to wind throw, making them a potential hazard to people, animals, structures and other property. On the 263 Bedford Banksville Road parcel, the establishment of the Black Locust dates to approximately 1960 (See Aerial Photo, Appendix 1) making most, if not all the trees, around 70 years old. Therefore, most of the Black Locusts are of poor vigor and in either severe decline or dead. For these reasons, the removal of the Black Locust groves would improve existing environmental conditions by eliminating a potential hazard and providing opportunities for beneficial plants, like pollinators, to recolonize areas of the site.

<u>Critical Environmental Area</u>

The 263 Bedford Road site is adjacent to and contains a portion of a designated *Critical Environmental Area* (Exhibit 4). Critical Environmental Areas (CEA) are areas in the state which have been designated by a local or state agency to recognize a specific geographical area with one or more of the following characteristics:

- A feature that is a benefit or threat to human health;

- An exceptional or unique natural setting;
- An exceptional or unique social, historic, archaeological, recreational, or educational value; or
- An inherent ecological, geological, or hydrological sensitivity to change that may be adversely affected by any physical disturbance.

A CEA designation serves to alert project sponsors to the agency's concern for the resources contained within the CEA. In this particular instance, the CEA encompasses the Mianus River and portions of the adjacent Westmoreland Sanctuary (Exhibit 5) and is designated a CEA because of its exceptional or unique natural setting.

Due to the presence of onsite wetlands and the regulated adjacent area, most activities in the CEA will be avoided. However, some activity will take place in the CEA including stable construction, enlargement of the outdoor riding rings and paddock establishment. Construction within the CEA is not prohibited; the purpose of the CEA is to inform the Project Sponsor of the Agency concern. In this instance the CEA is on private property but that portion of the CEA that may be viewed from the adjacent parkland will be preserved. This approach ensures that the exceptional or unique character of that portion of the CEA visible to the public will be left largely intact.

Archaeological Resources

The Short Environmental Assessment Form prepared for the 263 Bedford-Banksville Road property, using the NYS DEC EAF Mapper application, identified the location as “in or adjacent to an area designated as sensitive for archaeological sites on the NY State Historic Preservation Office (SHPO) archaeological site inventory.” An initial consultation with the SHPO disclosed that archaeological resources could be present on the Property. Further investigation into potential archaeological resources on the Property therefore is required to comply with NY State Department of Environmental Conservation (DEC) permitting requirements. It should be noted that, to avoid disturbance or theft to archaeological sites, SHPO does not disclose the exact location or nature of sensitive sites to the General Public.

To identify any potential archaeological sites on the 263 Bedford-Banksville Road property, the owner engaged the well-known and well-regarded cultural resources firm, Historical Perspectives, Inc. (HPI). HPI indicated that the SHPO’s Cultural Resources Information System (CRIS) database shows that the archaeological resource of interest is a New York State Museum (NYSM) Native American site recorded in the 1920s as “traces of occupation” along the Mianus River, which borders the property. CRIS maps the NYSM site to include a large buffer zone beyond the original site location; as such,

much of the Mianus River and its banks over an approximately two-mile length are included in the CEA.

HPI had undertaken an initial Phase 1A Archaeological Assessment of the 263 Bedford-Banksville Road property and had recommended additional field investigations as part of a Phase 1B Archaeological Investigation (Exhibit 3). This archaeological field testing has been completed and SHPO concurrence has been received that no additional investigation is necessary.

Conformance with Zoning Section 355-40 D

D. Additional horses. Where more than two horses are kept, the following additional requirements shall be met:

1. Use. Horses shall be solely for the noncommercial use and enjoyment of residents and their guests and no for-profit horse shows shall be permitted.

   The 263 Bedford Banksville Road property is for the personal, non-commercial use of the Gasiorowski Family and Guests'; no for-profit horse shows are proposed or will be permitted.

2. Special setback requirements. All buildings and grazing and exercising areas shall be set back from adjacent residential property boundaries at least twice the minimum distance required for residential buildings in said district, except that the Town Board may either increase or decrease this setback requirement because of relationships to neighboring properties, topography or the installation of buffer, landscaping and/or fencing. In no case, however, shall the minimum setback from adjacent residential property boundaries be less than 25 feet. (Section 355-40(D)(2).) In the R-4A District, the minimum required yards are 75 feet (front), 50 feet (side) and 50 feet (side).

   The 263 Bedford Banksville Road property is an existing horse farm and pre-dates current zoning. The existing paddocks and indoor riding arena are to be maintained in their current configurations although additional landscaping, in the form of screening, trees will be installed along north side of the current indoor arena.

   New equestrian-related facilities, including the 10-stall stable, are to be located to meet at least twice the minimum yard in compliance with Section 355-40 D. 2. In addition, a 150-foot Landscape buffer is being maintained between any horse or other activities and the neighboring (Geist) property line to the south. The Landscape Buffer will be maintained in the current wooded condition, except that dead, diseased, or hazardous trees will be selectively removed. The understory will be supplemented by an underplanting of evergreen screen trees to create a diffuse buffer to the neighboring property. See Site Landscaping Plans.

3. No less than one acre of land shall be available for each additional horse.

   The property is 21.6 acres. Two horses are allowed "as of right" and an additional horse is allowed per each full acre for a total of 23 horses. The requested special use permit is for only 20 horses which complies with this Section.

4. Permitted grazing and exercising areas. Horses must be fenced and shall not be permitted to graze, exercise or in any way intrude into any areas designated as controlled areas under Chapter **340**, Wetlands and Watercourse Protection, of the Town Code.

   The 263 Bedford Banksville Road property is an existing horse farm and pre-dates current wetland regulations. A portion of the existing paddocks near Bedford Banksville Road are within the 100-foot adjacent areas to locally regulated wetlands and are proposed to be maintained in their current configuration. Since the status quo is being maintained in terms of existing use and number of horses and no disturbance is proposed of the paddock within the adjacent area, the paddock should be grandfathered under the Zoning Code. All new facilities are to be located to comply with the Town Wetland and Watercourse Law and ***no activities within wetland or the regulated adjacent are proposed.***

5. Grooms' quarters. Apartments may be provided for grooms and any other employees required to manage the horses to be stabled on the site. Such apartments shall be used only by such employees and occupied only during that period of the year when horses are stabled on the site. There shall be no more than one bedroom for every five horses stabled on the site. To the maximum extent practicable, the arrangement of such apartments shall be so designed so that kitchen and bathroom facilities are shared.

   Per Zoning Section 355-40 D, up to four (4) groom's quarters can be permitted, one per each 5 horses. In accordance with that provision, the Applicant is proposing a four-bedroom Grooms' Quarters that will be located in a new storage building/grooms' quarter centrally located on the site. Bathroom and kitchen facilities will be shared. The use will be linked to when the Applicant's horses are on the Property, generally from April 15th until October 15th.

   In addition, the Applicant is proposing a two-bedroom Servants' Quarters, centrally located and well screened from surrounding properties. The Servant Quarters will be for the exclusive use of the farm manger.

6. Additional application requirements. In addition to the general application requirements for special permit uses specified above, the application for additional horses shall contain the following:

   a) The designation of areas where existing vegetation will be cleared for grazing and/or exercising areas. The type of grasses and other vegetation to be replanted in these areas for grazing will be described. A planting schedule should also be provided.

      Most of the existing paddock areas are well established and only one new paddock will be added under the current plan of development. Establishment and management of paddocks will be in accordance with the NRCS publication New Jersey, Pasture Management Guide for Horse Owners (Appendix 4). This publication provides a comprehensive overview for the establishment, management and rotation for paddock areas, and will be the primary resource for paddock management. It should be noted that paddocks on this property are generally to be used for turn-out and are not the primary source of food for the horses.

b) The designation of areas for the storage of manure and other materials that could negatively affect air quality and surface water and groundwater quality. The method of such storage will also be described. If off-site disposal of such materials is proposed, the location of the off-site disposal area should be specified. No storage of manure shall be permitted to exceed 10 cubic yards in quantity or be located within 100 feet of a property line, watercourse or controlled area.

All manure will be collected and disposed of in an approved off-site location by a NYS licensed carter, yet to be determined. Manure and soiled bedding will be collected daily and deposited in a 30-yard sealed container located adjacent to the 10-stall barn. The 30-yard container will be emptied on a weekly basis or more frequently if required.

Manure from paddocks will be collected on a minimum of a weekly interval or more frequent if needed. No manure will be stored within 100-feet of a property line or Wetland or watercourse and no manure will be stored on the Property other than that contained in the 30- yard container slated for weekly disposal.

c) All feed shall be stored in rodent proof containers.

Feed will be delivered on a periodic basis to minimize the amount needed to be stored on-site. All feed will be stored in rodent-proof metal containers.

d) A detailed management plan specifying the number of horses and the planned schedule over the course of the year when horses will be kept on the site. The management plan should discuss the potential impacts on the environment of keeping the proposed number of horses and the method to mitigate those impacts. This requirement may be waived at the discretion of the Town Board.

This narrative has been prepared to help the Town Board and Planning Board evaluate the existing environmental conditions, potential impacts and measures proposed to mitigate the potential impacts on the environment from keeping the 20 horses on the 263 Bedford Banksville site. A detailed Horse Management Plan has also been prepared and is attached as Appendix 4 of this narrative.

e) A detailed plan of the proposed stables showing the use of floor space by type of use and floor level.

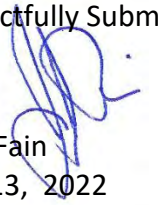
In accordance with Chapters 355, Article VII Section 355 -34 and Section 355-40 D. of the Town of North Castle Zoning Ordinance, elevations and floor plans of all proposed buildings are required and have been provided by the Applicant. The Applicant notes that as part for the Site Plan Review process, approval from the Town of North Castle Architectural Review Board is also required.

Summary

The Applicants, Chloe and Michal Gasiorowski, are proposing to keep a maximum of 20 horses in accordance with Chapter 355 40 D. of the Town of North Castle Zoning Ordinance. The existing property has been in continual use as an equine facility with stables for 20+ horses since at least

1972. The use shall be solely for the noncommercial use and enjoyment of the Gasiorowski Family and Guests and no for-profit horse shows will occur. Existing buildings will be either renovated or removed, a new 5-bedroom primary residence, four- bedroom grooms' quarters, two-bedroom servants quarters, new stable, pool and pool house will be constructed. All new construction meets the minimum zoning setbacks on the property. In accordance with the Town of North Castle Wetland and Watercourse Law no activities are proposed in wetlands or within 100 feet of the regulated resources. The property contains portions of the 100-year floodplain from the Mianus River. Although no activities are proposed in these areas, a Flood plain Development Permit is required and will be obtained prior to construction. All other Local, State and Federal regulations will be complied with. The Applicant has prepared a Horse Management Plan to guide the Owner in the management of the farm including manure management and removal, paddock management, and the proper storage of hay and feed to avoid rodent pests and vermin. The Applicant has considered the existing environmental conditions, potential impacts and has proposed measures to mitigate any potential impacts on the environment from the keeping of the 20 horses on the 263 Bedford-Banksville Road site.

Respectfully Submitted



Jay J. Fain
June 13, 2022

[i] The existing stall in the indoor arena were recently removed to accommodate the proposed renovations and improvements, include replacement of the existing roof for which building permit has been issued.

November 30, 1972

(8)

Councilman Baroni resolved, seconded by Councilman Lander that Carol Lascari of Windmill Farm be and hereby is appointed as Court Clerk for the Town of North Castle effective as of December 15, 1972 at a rate of pay of $4.00 per hour and to serve at the pleasure of the Town Board and it is further resolved that Mrs. Lascari and County Personnel Office be so notified.

The vote on this resolution was unanimous as follows:
Ayes: Councilmen Baroni, Lander, Balliett, Bancroft and Supervisor Lombardi.
The Supervisor declared the resolution duly adopted.

Councilman Baroni resolved, seconded by Councilman Lander that Frederick Wright be and hereby is appointed as Chairman of the Town Recreation Board.

The vote on this resolution was unanimous as follows:
Ayes: Councilmen Baroni, Lander, Balliett, Bancroft and Supervisor Lombardi.
The Supervisor declared the resolution duly adopted.

A letter dated November 29, 1972 from James Fulton of Fairfield, Connecticut was read thanking the Police Department for the assistance given in an automobile emergency. The letter was received and referred to the Police Department on the duly adopted motion of Councilman Lander.

A letter dated November 27th, 1972 from Supervisor Russo of the Town of Greenburgh was read acknowledging receipt of Supervisor Lombardi's stand in opposition to the possible location of a U.D.C. Housing Site on the Alfredo Nursery Property. The letter was received and filed on the duly adopted motion of Councilman Lander.

The Town Clerk was instructed, on the duly adopted motion of Supervisor Lombardi, to prepare a citation resolution for Wallace C. Doud of Windmill Farm, as one of North Castle's outstanding citizens being honored by B'nai B'rith for the Annual Youth Services Award.

After consultation with Patricia Debaney, her architect and her builder on the rejection by the Architectural Board of Review of her plans for a private use indoor horse riding ring and recreation building and upon the advice of the Town Attorney that such use is a permitted use under Section 421 of the Residential Use Provision of the Zoning Ordinance, Councilman Balliett resolved, seconded by Councilman Bancroft that the desicision of the Architectural Board of Review in denying approval of such plans be and hereby is reversed and it is further resolved that a building permit for stated construction of a private riding ring be and hereby is authorized and granted.

The vote on this resolution was unanimous as follows:
Ayes: Councilmen Balliett, Bancroft, Baroni, Lander and Supervisor Lombardi.
The Supervisor declared the resolution duly adopted.

The Town Clerk was instructed to send a letter of sympathy and condolence from the Town Board to Anthony D'Alessandro on the occasion of the death of his wife, Mary.

The Town Board audited and approved for payment Claims numbered 1642 to 1736 inclusive, totaling $30,562.23 as indicated on Warrant No. 20.

The Supervisor declared the meeting adjourned at 10:30 o'clock p.m. on the duly adopted motion of Councilman Lander.

Jos. T. Miller - Town Clerk

SOILS MAPPING & WETLAND/WATERCOURSE DELINEATION FOR 263 BEDFORD BANKSVILLE ROAD, NORTH CASTLE, NY 10506

PROPERTY LOCATION AND DESCRIPTION:

LAND USE: **Horse Farm** ACRES: **21.0±**

DELINEATION ADDRESS: **263 Bedford Banksville Rd. North Castle, NY 10506**

REPORT COMPLETED FOR:

NAME: Kent Farrington c/o Old Town Barns

MAILING ADDRESS: 125 Rt. 22 Pawling, NY 12564

MAPPING AND DELINEATION METHODOLOGY

Soils analysis, as described in this report, is intended as an inventory and evaluation of the existing soil characteristics on the subject property. A first order soil survey in accordance with the principles and practices noted in the USDA publication Soil Survey Manual (1993) was completed at the site. Soil units mapped in the field correspond with those in the USDA publication *Soil Survey of Putnam and Westchester Counties, New York* (1994).

Wetland identification was based on the presence of poorly and very poorly drained soils and/or a prevalence of hydrophytic vegetation. Soil types were identified by observation of soil morphology (soil texture, color, structure, etc.). To observe the morphology of the property's soils, numerous two-foot deep test pits and/or hand borings were completed throughout the site. Prevalence of hydrophytic vegetation was confirmed by visually determining the dominant plant species in each vegetation community in accordance with the Onsite Routine Determination method as described in the 1989 manual titled Corps of Engineers Wetland Delineation Manual (Manual) by the Environmental Laboratory. Transects were located perpendicular to and at representative points along the perceived boundaries of the wetland areas identified on the property. Soil morphologies and vegetation were observed at sampling points along the transects. Sampling began well outside the bounds of the wetland and continued towards it until hydric soils and/or a prevalence of hydrophytic vegetation were observed. This point on each transect was marked (flagged) with an orange surveyor's tape labeled "Wetland Boundary". The complete boundary of every wetland area is located along the lines that connect these sequentially numbered boundary points.

The wetland and watercourse boundaries are subject to change until adopted by the Town.

SOIL MAP UNITS

Each soil map unit that was identified on the property represents a specific area on the landscape and consists of one or more soils for which the unit is named. Other soils (inclusions that are generally too small to be delineated separately) may account for 10 to 15 percent of the map unit. The mapped units are identified in the following table by name and symbol and typical characteristics (parent material, drainage class, high water table, depth to bedrock, and slope) of each unit are provided. These are generally the primary characteristics to be considered in land use planning and management. A narrative that defines each characteristic and describes their land use implications follows the table. Complete descriptions of each soil map unit can be found in the *Soil Survey of Putnam and Westchester Counties, New York* (1993).

SOIL CHARACTERISTICS: DEFINITIONS AND LAND USE IMPLICATIONS

PARENT MATERIAL: Parent material is the unconsolidated organic and mineral material in which soil forms. Soil inherits characteristics, such as mineralogy and texture, from its parent material. Glacial till is unsorted, nonstratified glacial drift consisting of clay, silt, sand and boulders transported and deposited by glacial ice. Glacial outwash consists of gravel, sand and silt, which is commonly stratified, deposited by glacial melt water. Alluvium is material such as sand, silt or clay deposited on land by streams. Organic deposits consist of decomposed plant and animal parts.

A soil's texture affects the ease of digging, filling and compacting and the permeability of a soil. Generally sand and gravel soils, such as outwash soils, have higher permeability rates than most glacial till soils. Soil permeability effects the cost to design and construct subsurface sanitary disposal facilities and, if too slow or too fast, may preclude their use. Outwash soils are generally excellent sources of natural aggregates (sand and gravel) suitable for commercial use, such as construction subbase material. Organic layers in soils can cause movement of structural footings. Compacted glacial till layers make excavating more difficult and may preclude the use of subsurface sanitary disposal systems or increase their design and construction costs if fill material is required.

DRAINAGE CLASS: Drainage class refers to the frequency and duration of periods of soil saturation or partial saturation during soil formation. Seven classes of natural drainage classes exist. They range from excessively drained, where water is removed from the soil very rapidly, to very poorly drained, where water is removed so slowly that free water remains at or near the soil surface during most of the growing season. Soil drainage affects the type and growth of plants found in an area. When landscaping or gardening, drainage class information can be used to assure that proposed plants are adapted to existing drainage conditions or that necessary alterations to drainage conditions (irrigation or drainage systems) are provided to assure plant survival.

HIGH WATER TABLE: High water table is the highest level of a saturated zone in the soil in most years. The water table can effect when shallow excavations can be made; the ease of the excavations, construction, and grading; and the supporting capacity of the soil. Shallow water tables may preclude the use of subsurface sanitary disposal systems or increase design and construction costs if fill material is required.

DEPTH TO BEDROCK: The depth to bedrock refers to the depth to fixed rock. Bedrock depth affects the ease and cost of construction, such as digging, filling, compacting and planting. Shallow depth bedrock may preclude the use of subsurface sanitary disposal systems or increase design and construction costs if fill material is required.

SLOPE: Generally soils with steeper slopes increase construction costs, increase the potential for erosion and sedimentation impacts, and reduce the feasibility of locating subsurface sanitary disposal facilities.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:12,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Westchester County, New York
Survey Area Data: Version 16, Jun 11, 2020

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Dec 31, 2009—Oct 16, 2017

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI

Tree Survey
Chloe & Mikhail Gasiorowski, Applicant
Marengo Farms, LLC, Owner
263 Bedford Banksville Road
North Castle, New York

In the Town of North Castle, the removal of "trees" is regulated under Chapter 308. Article II of the Town Code: *Trees*. Under the provisions of this law a "tree" is defined as "[a]ny living, woody plant which has a DBH of eight inches or more" and a "significant tree" is defined as a tree of "twenty-four inches or greater DBH at 4½ feet".

A permit is required to remove a tree according to the following criteria (Section 308-13):

A. Removal of a tree within a property's regulated setback or landscape buffer zone
B. Removal of a significant tree
C. Removal of any tree in wetlands, within clearing lines, or conservation easements
D. Clearing/ Thinning
E. Removal of any street tree within the right-of-way
F. Removal in any calendar year of more than 10 trees on any lot

The accompanying tree survey was performed to provide an inventory of the existing trees on the property for use by the Engineering and Landscape Architectural Consultants to help plan improvements to this property and to comply with Chapter 308. All trees of interest were numbered and located by the Project Surveyor and plotted on the Project Survey. **It is important to note that only trees in areas where they are scheduled to be removed for the proposed residential and equine development were located by the project surveyors - TC Merritts Land Surveyors. This is depicted by the project Development Limit Line (DLL). In some places, the Development Limit Line does not coincide with the proposed Grading Limit Line (GLL). Trees removed outside of the GLL will be removed by hand and require no ground disturbance.**

The location, size, and type of each tree 8 inches DBH and greater, is provided on the Tree Survey for planning and regulatory purposes. In addition, Environmental Scientists from Jay Fain & Associates visited the 263 Bedford Banksville Road site during the month of June 2021. Each tree (8 inches DBH and greater) located in potential impact zones was identified by species and measured using a standard DBH tape (English measurement units). Trees were also evaluated for overall condition, health and vigor, structure and form, and canopy position. Notes were also recorded and a general recommendation for disposition was made.

489 trees with DBH 8 inches through 23 inches, were located within in the **Disturbance Limit Line** as identified under the Residential Development and Equine Use Expansion proposal. Of those 489 trees, it is proposed that 475 will be removed in connection with construction activities or because the trees are in poor health or a hazard to people and property.

In addition, 27 significant trees (24 inches or greater) were identified within the DLL for residential development and the expanded equine use. Of these 27 significant trees, 24 are slated to be removed. Of the 24 significant trees to be removed, 17 are considered hazard trees due to their age, condition, health or species composition. A hazard tree is defined as having a significant potential to endanger the public's health, safety or welfare. Hazard trees include dead trees or those in severe decline, diseased trees, trees with hollow trunks, trees in open areas prone to wind throw or wind damage, etc.

Data for all trees inventoried is presented in two formats. The first is an overall list by tag number designated in the field (Table 1) and includes relevant data with respect to health, vigor, and disposition. (It should be noted, that due to supplier inventory problems associated with COVID-19, tag numbers 528 - 799 were not available and were not utilized. Therefore, the tag numbers of individual trees do not necessarily represent the numerical tree count, please see column 01 of the tree inventory for that information).

A tree list sorted by Individual Species / Common Name has also been provided (Table 2). The species composition of all trees is exhibited in Figure 1. One species, Black Locust, comprises 465 individuals or 90.1% of the trees identified. In this instance, the dominant woody vegetation on the site is Black Locust (*Robinia pseudoacacia)*. Black Locust is an early successional species and often is one of the first plants to colonize old agricultural fields once they have been abandoned from regular agrarian use.

Black Locust, while native to the US, has been historically found east of the Mississippi and south of Pennsylvania. Over time, its range has expanded to the northeast, most likely because its wood was valued by farmers for its resistance to rot. In New York State, Black Locust is considered an invasive species and the NYS DEC has addressed this condition by adding Black Locust to its list of prohibited and regulated plants. Black Locust is considered an invasive, noxious plant because it colonizes old fields early and quickly outcompetes other more desirable native species that have higher ecological benefits such as for food and habitat for wildlife (See Attachment 1, Lower Hudson PRISM Report). Another drawback of Black Locust is that as an early pioneer species, it grows quickly but is short lived. As it matures, the crown quickly declines, and with shallow limited root systems, these trees are problematic because they are susceptible to wind throw, making them a potential hazard to people and property. On the 263 Bedford Banksville Road parcel, the establishment of the Black Locust dates to approximately 1960 (Figure 2) making most, if not all the trees, around 70 years old. Most of the Black Locusts are in poor vigor, severe decline or dead. For these reasons, the removal of the Black Locust groves would improve existing environmental conditions by both eliminating a potential hazard and by providing opportunities for beneficial plants, like pollinators, to recolonize areas of the site.

Since the entire 21.6 $\pm$ acre site was not inventoried, the total number of "trees" (greater than 8 inches) and "significant trees" (greater than 24 inches) is not known. However, 16$\pm$ acres of the site will remain undisturbed, approximately of which half are forested. Therefore, most of the trees on the 263 Bedford Banksville Road site, including significant trees, will be preserved. This includes the most sensitive area of the site including the riparian areas adjacent to the east branch of the Byram River, and most of the Critical Environmental Area. The total area within which trees are proposed to be removed, is less than 10 acres. A landscape plan is proposed to replace some of the tree cover to be removed.

Lower Hudson PRISM Report

UGA0008

Description

- Black locust is a member of the Legume family (Fabaceae)
- A tall, attractive, spring blooming tree, Black locust is most easily recognizable in late May and early June when abundant racemes of white to pinkish flowers cover the trees' open, irregularly shaped crowns. Black locust's bark is deeply grooved and furrowed. Trees have extremely sharp spines at the nodes of young branches and twigs. (4)

Leaves

Leaves are alternately arranged, compound and comprised of 7-19 leaflets on a leaf that is 8-12 inches long. Each leaflet is oval, alternately arranged, and dull dark green in color. (2)

Flowers

Flowers are white, fragrant, bilaterally symmetrical and arranged in showy, six inch long drooping clusters. (2)

Fruit/Seed

Flowers develop into elongate, flat brown pods 2-4 inches long, similar in appearance to other members of the bean family. Each pod contains 4-8 round, flat seeds brownish reddish in color. Often, fruits will hang on the tree well into winter, or even the following spring. (4)

Introduction History

Native east of the Mississippi from Pennsylvania south, black locust has greatly expanded its range after escaping from street tree and erosion control plantings. An incredibly durable, disease-resistant species, Black locust is also prized as a 'living fence' tree. The tree is now common across New York and New England. (2)

Ecology and Habitat

Black locust invades a variety of habitats in the Hudson Valley region, however, it is most commonly seen in areas associated with plantings and anthropogenic disturbance such as old farm fields or roadsides, vacant lots and forest edges. The species does not tolerate moist soils or shaded sites well. (4)

Reproduction and Phenology

Although black locust commonly reproduces clonally, via vegetative root suckers, a single individual is capable of producing thousands of viable seeds each year, forming a highly persistent seed bank. One study showed Black locust seeds to be viable after 40 years. (6) The germination rate is approximately 68% in its native range and much lower in shaded sites. (7) Vectors include birds and small mammals (7)

Impacts of this species

Vegetative regeneration is vital in this plant's establishment, spread and persistence in non-native locations, giving it the ability to replace native vegetation. Developing black locust thickets can prevent other plants from establishing and may disrupt historical successional trajectories. In mixed-hardwood forests, these trees have been seen to contribute to elevated stream nitrate concentrations. Because of its nitrogen fixing abilities, black locust may also alter local soil characteristics, in turn disrupting biological activity in soil and preventing certain native plants from growing. Black locust canopies may block sunlight from reaching seedlings of other plants, such as native oaks, ultimately lowering species diversity. Seeds may remain viable in soil for more than 10 years, and are oportunistic in growth, giving them the ability to thrive through non-ideal conditions.

Management Methods

Biological Control

There is currently no single optimal biological control agent in use against this species, although a wide variety of native insects and fungi do target it. (4)

Manual or Mechanical Control

Pulling / Digging Up: Pulling by hand is an effective method of control for seedlings. For larger plants, disturbance of the root will encourage re-sprouting. (7)

disturbance of the root will encourage re-sprouting. (7)

Mowing: Not advisable. Black locust plants have a strong tendency to re-sprout following cutting or any kind of disturbance. If this strategy is pursued it must be undertaken consistently, several times a season, for several years. (8)

Girdling: Not advisable in isolation. Girdling alone encourages the formation of root suckers.

Prescribed Fire: Not advisable in isolation. Fire will kill the main stem of black locust trees but stimulate strong suckering and root sprouting. (7)

Prescribed Grazing: Not advisable. The high tannin content in leaves can interfere with ruminant digestion. (4)

Soil Tilling: Not advisable. Tilling will fragment roots and encourage re-sprouting. It will also expose more seeds for germination. (8)

Mulching: Not applicable

Solarization: Not applicable

Hot Foam Spray: Not applicable

Chemical Control

Foliar Spray: A 1% solution of glyphosate or triclopyr is effective at managing small plants of black locust, although repeat applications may be necessary. Infestations managed in this way should be revisited in 2-3 weeks to monitor for regrowth. Always read and follow all instructions on the herbicide label. (8)

Cut Stump: A 20-50% solution of glyphosate is effective at managing larger plants of black locust when applied to cut stumps in the late summer or fall. (8)

Basal Bark: A 20% solution of triclopyr in oil is effective on trees with thin bark (i.e less than 6 inches in diameter) when applied between midsummer and December.(8)

Hack-And-Squirt: No information available.

Stem Injection: A 10% solution of Aminopyralid can be used in stem injections during the late summer and fall.

Pre-Emergent Spray: Not applicable

The pesticide application rates and usage herein are recommendations based on research and interviews with land managers. When considering the use of pesticides, it is your responsibility to fully

interviews with land managers. When considering the use of pesticides, it is your responsibility to fully understand the laws, regulations and best practices required to apply pesticides in a responsible manner. At times, the pest you seek to treat may not be listed on a pesticide label, requiring a 2(ee) exemption from NYSDEC. Always thoroughly read the label of any pesticide and consult the NYSDEC or a licensed pesticide applicator with questions.

Summary of Best Managment Practices

General management overview and recommendation

As with any other invasive infestation complex, large stands of black locust are best managed via a combination of mechanical and chemical means. Small seedlings can be hand pulled or sprayed while larger trees must be sprayed, either with a basal bark or cut stump application, to attain good control. All managed infestations should be monitored to ensure exhaustion of the seed bank and to prevent reinvasion from nearby populations. Any new seedlings can be hand pulled or sprayed.

Post treatment monitoring

Any infestations managed by chemical means must be revisited in 2-3 weeks to check for treatment efficacy. Infestations managed solely by mechanical or physical means will need consistent follow up treatment to manage root suckers and sprouts. Due to the species long-lived seed bank, managed infestations should be intentionally revegetated and monitored for future black locust seedling emergence.

Disposal Methods

Waste material can be burned, chipped or composted so long as management was completed prior to seed set. Any fruit must be bagged and disposed of. All roots must be thoroughly dried and or crushed.

Archeological Review

by: **Historical Perspectives Inc. (HPI)**

HISTORICAL PERSPECTIVES INC.

May 19, 2022

Memorandum: Updated Archaeological Review
263 Bedford-Banksville Road
Tax Map Section 95.03 / Block 2, Lot 56
Bedford, Town of North Castle, Westchester County, NY

NYSHPO 21PR06914 / 21SR00638

Introduction

In 2021 Historical Perspectives, Inc. (HPI) completed a Phase IA Archaeological Assessment and a Phase IB Archaeological Investigation of the 263 Bedford-Banksville Road property in Bedford, Town of New Castle, New York. The Phase IA report identified areas of archaeological sensitivity on the project site (HPI 2021a: Figure 16, Appendix A of this memo) and the Phase IB report summarized the results of archaeological field testing within those sensitive areas that were proposed to be affected by new development associated with facilities expansion and upgrades of the current horse farm (HPI 2021b: Figure 5, Appendix B of this memo). The two reports were submitted to the New York State Office of Parks, Recreation, and Historic Preservation (NYSOPRHP or SHPO) in October 2021, under project number 21PR06914, in order to obtain a New York State Department of Environmental Protection (DEP) permit, which is necessary for construction. Tim Lloyd of SHPO responded on October 21, 2021:

> We have reviewed the report of the Phase I archaeological survey (No. 21SR00638) and no archaeological sites were identified. We have no concerns regarding the project's potential impacts to historic architectural resources. Therefore, it is the OPRHP's opinion that no properties, including archaeological and/or historic resources, listed in or eligible for the New York State and National Registers of Historic Places will be impacted by this project.

This response letter from SHPO is included as Appendix C of this memo.

New project sponsor and updated plans

At the time that the reports were completed, the project sponsor was Kent Farrington, LLC. Since 2021, that sponsor has declined to move forward with their proposed project and a new client, Marengo Farms, LLC of Bedford Hills, New York, is proposing similar improvements to the project site under a separate approval process with the Town of North Castle. The new site plan showing the proposed improvements to the project site is included in this memo as Appendix D.

The proposed site plan by Merengo Farms, LLC is generally similar to the 2021 site plan in terms of the existing and proposed facilities, as well as the overall limits of disturbance, or "Grading Limit Line." The only location where the limits of disturbance overlap areas that HPI identified as archaeologically sensitive in the Phase IA study, but were not tested as part of the Phase IB study, are along the existing north-south driveway leading to the existing house.

On the east side of the existing driveway, a new driveway is proposed at a slightly different alignment that will slightly truncate the western edge of two existing paddocks. Due to the angle of the proposed new driveway, approximately 150 linear feet along the edges of the paddock will be affected, measuring from 0-40 feet in width, in an area previously identified as archaeologically sensitive, but that was not previously field tested. This area is shown in Photograph 1.

On the west side of the existing driveway, the terrain will be regraded slightly, some of the existing fences will be relocated so as to extend an existing paddock further to the east, and new fencing or barriers will be constructed in proximity to a proposed new garage adjacent to the existing paddock. An area approximately 80 feet in length and

20-50 feet in width on the west side of the existing driveway will be affected in an area that was previously identified as archaeologically sensitive, but that was not previously field tested. This area is shown in Photograph 2.

All of the other areas of the project site that had previously been identified as archaeologically sensitive and are proposed for new improvements as part of the 2022 proposed project, were field tested by HPI in 2021 (see Appendix B of this memo). A total of 65 shovel tests were completed for the Phase IB work. The Phase IB field testing did not locate any archaeological sites. The only archaeological artifact recovered was one isolated chert flake in a shovel test located approximately 150 feet east of the Mianus River, as shown on Figure 5 of the Phase IB report and included in this memo as Appendix B. Based on the lack of any archaeological sites on the project site, the Phase IB field testing report recommended no further work for the proposed project (HPI 2021b). The SHPO concurred with this finding (Appendix C).

Conclusions and recommendations

Comparison of the 2021 proposed site plan for the 263 Bedford-Banksville Road property to the 2022 proposed site plan for the same parcel indicates that the limits of proposed disturbance where future ground impacts will occur is largely similar. The only locations where new ground disturbance is proposed in the 2022 site plan that were not previously indicated on the 2021 site plan are along the existing north-south driveway leading to the existing residence, an area that visually appears to have been graded at some point historically (Photographs 1 and 2). The 2022 site plan indicates a new driveway at a slightly different alignment will cause limited areas of disturbance to previously identified areas of potential precontact archaeological sensitivity. These areas were not field tested as part of the 2021 Phase IB archaeological testing program; however, they do not appear to meet the criteria for precontact sensitivity based on the 2021 field results. Completed shovel tests in proximity to these areas revealed exposed bedrock and gravel concentrations, and graded and filled soils. Further, no historic resources were ever mapped near this area so there is no sensitivity for historic archaeological resources.

HPI completed widespread field testing in 2021, when 65 shovel tests were excavated across the project site in potentially sensitive areas. Only one isolated chert flake was recovered, located approximately 150 feet from the Mianus River. The relatively small areas that will be affected by future ground disturbance in the 2022 site plan that have not been previously shovel tested are situated approximately 400-600 feet from the Mianus River, depending on location. Given the extensive Phase IB field testing completed to date on the project site, and the fact that no archaeological sites were identified, it is HPI's professional opinion that the probability is very low that the limited new areas of proposed disturbance would reveal any archaeological artifacts or sites. Based on these conclusions, HPI recommends that no additional archaeological studies are necessary given the 2022 changes to the project.

Re: DEC
Farrington Horse Farm Expansion
263 Bedford-Banksville Road, North Castle, Westchester County, NY 10506
21PR06914

Dear Cece Saunders:

Thank you for requesting the comments of the Division for Historic Preservation of the Office of Parks, Recreation and Historic Preservation (OPRHP). We have reviewed the submitted materials in accordance with the New York State Historic Preservation Act of 1980 (Section 14.09 of the New York Parks, Recreation and Historic Preservation Law). These comments are those of the Division for Historic Preservation and relate only to Historic/Cultural resources. They do not include potential environmental impacts to New York State Parkland that may be involved in or near your project. Such impacts must be considered as part of the environmental review of the project pursuant to the State Environmental Quality Review Act (New York Environmental Conservation Law Article 8) and its implementing regulations (5NYCRR Part 617).

We have reviewed the report of the Phase I archaeological survey (No. 21SR00638) and no archaeological sites were identified. We have no concerns regarding the project's potential impacts to historic architectural resources. Therefore, it is the OPRHP's opinion that no properties, including archaeological and/or historic resources, listed in or eligible for the New York State and National Registers of Historic Places will be impacted by this project.

If further correspondence is required regarding this project, please refer to the OPRHP Project Review (PR) number noted above. If you have any questions, please contact me via email.

Sincerely,

Tim Lloyd, Ph.D.

Horse Management Plan
&
Pasture Management Guide

HMP by**: Jay Fain & Associates, LLC**

PMG by**: Natural Resources Conservation Service (NRCS)**

Horse Management Plan
Chloe & Mikhail Gasiorowski, aka Marengo Farms, LLC
263 Bedford Banksville Road
North Castle, New York

Use: The 263 Bedford Banksville Road property is for the non-commercial use of Chloe & Mikhail Gasiorowski, Family, and Guests, and no for-profit use or horse shows are permitted.

Number of Horses: Per Section 355 40 D. 3, the number of horses on this 21.6-acres property is limited by Special Permit, to two (2) horses as of right and an additional 21 per full additional acre, for a total of 23 horses on the property at any one time. A Special Permit is sought to have a total of **20** horses.

Groom's Quarters: Domicile Facilities on the 263 Bedford Banksville Road property will be provided for four grooms. Kitchen and bathroom facilities will be shared.

Manure Management: In general, no manure shall be stored or composted on the property and all manure shall be managed so that it does not negatively affect air quality, and surface water and groundwater quality. Specific guidelines for manure management are as follows:

- A 30-yard sealed container shall be provided at all times for the disposal of manure. The container will be removed, and the manure disposed of at an approved off-site location by a licensed NYS carter. During the times the horses are in residence, the container will be emptied on at least a weekly basis or more often, if required.
- Manure and soiled bedding will be collected daily.
- Manure in paddocks will be collected weekly, or more frequently as required.
- No storage of manure shall be permitted to exceed 10 cubic yards in quantity or be located within 100 feet of a property line, watercourse, or controlled area.

Paddock Management: In general, paddocks shall be managed in accordance with the NRCS publication *Pasture Management Guide for Horse Owners*. This shall include:

- Paddocks should be primarily used for turn-out and should not be used as a food source.
- Paddocks should be inspected on a routine basis and should be rested if exhibiting signs of over grazing.
- Rotational grazing will be employed to ensure healthy vegetation growth.
- Manure clumps are a primary cause of spotty pasture growth. Manure shall be removed on a regular basis to ensure healthy grasses.
- All-weather, or medicinal paddocks, shall be utilized during periods of inclement weather to avoid soil compaction and ensure good grass coverage.
- If any paddock shows signs of excess erosion, its use shall be discontinued immediately, and steps taken to remediate the source of erosion.

Food and Hay Storage:

- Hay should be inspected upon delivery to make sure it is dry, free from mold or other contamination and the bales are intact.
- Hay should be stored in a waterproof location. When stored indoors ventilation and air circulation are essential. Stack hay to promote air circulation, avoid stacking hay too tightly or to the ceiling.
- Hay stored outdoors should be under well-secured waterproof tarps or other coverings that will withstand wind, rain, sun, and snow.
- Grain and feed supplements should also be kept in cool, dry environments in metal containers tightly closed to seal out moisture, insects and/or rodents.
- Feed should be rotated frequently, and the amount of feed stored on-site should be minimized. Feed stored too long is subject to degradation and mold and mycotoxin development which can be toxic to horses.
- Keep feed rooms secure and plug any holes that may allow for rodent entry. Feed rooms should be kept dry and warm.

Medicine Storage and Handling:

- Proper storage and handling of medicines is critical to their efficiency and safety.
- Per manufacturers' instructions, aseptic techniques are to be used when administering medicine and vaccines.
- Storage and handling instructions may be product specific; follow manufacturers' recommendations.
- Have a designated individual responsible for handling and storage of medicines.
- Maintain a medicine inventory log, documenting: name, manufacturer, lot number and expiration date, date and number of doses received; and arrival condition of the medicine.
- Store medicines in a refrigerator with a separate freezer compartment. Store vaccines in the middle of the refrigerator, **NOT** in the door or against the back of the refrigerator.
- Organize medicines according to expiration date, avoiding waste by ensuring that products with earlier expiration dates are used before products with later dates.

Stable Sanitation and Management: Clean, well-managed facilities are safer for horses and personnel and less likely to provide places for rodents to hide, find food or breed. Follow these guidelines:

- Stable aisles should be kept free from any manure, obstructions or debris and swept at least daily.
- Feed rooms should be kept secure, dry and warm and any spills cleaned up immediately. Rotate feed on a regular basis. Discard any wet or contaminated feed.
- Fire and smoke alarms are required in all areas inhabited by people or horses. All fire and smoke alarms should be kept free of dust and debris and inspected regularly. Batteries

should be changed per manufacturers' recommendations or local code whichever is more restrictive.

- Fire extinguishers should be provided at multiple locations and clearly marked.
- First Aid Kits should be provided and regularly serviced. A defibrillator should be provided and located in a central, well-marked location. First Aid kits should also be provided for horses.
- In case of emergency, a list of local emergency contacts and directions to the nearest medical facility should be provided in each building.
- An emergency evacuation plan shall be prepared for the evacuation of horses from stable areas. The owner and all employees should be familiar and have access to this plan and it should be posted prominently in each facility. Part and parcel of any emergency evacuation plan is to maintain an inventory of horses on the property, and at any given time, to ensure all can be accounted for in case of an evacuation.

GUIDE FOR HORSE OWNERS

Contents

New Jersey Horses
and the People Who Raise Them

New Jersey has more than 42,500 horses. More than 70% of the State's 7,200 equine operations have fewer than eight equine animals.* These smaller operations include commercial facilities, stables, riding clubs and residences where people keep horses on relatively small acreages. This publication is designed to present basic information about the special grazing system and forage needs of horses.

In many cases, people view their horses as pets or companion animals rather than as livestock. They can become emotionally attached to their horses, and are interested in providing the best care for them. The majority of horse owners do not raise any other livestock.

A well-managed grazing system can offer good nutrition, as well as the most economical and safest care for horses. These simple, inexpensive, low-maintenance management techniques also can protect and preserve natural resources by reducing soil erosion and preventing pollution of surface and groundwater from animal waste that washes off pastures and corrals.

* Source: New Jersey Equine Industry 2007 - Economic Impact, Rutgers Equine Center www.esc.rutgers.edu

Horse Facts

- Most of the time, a horse has "monocular" vision. This means a different image is seen by each eye so that a horse is seeing two different pictures at the same time. A horse can also have "binocular" vision, like humans, but only when it is looking down its nose. A horse can see completely around its entire body except for small blind spots directly in front of its face, underneath its head, and directly behind itself.

- Usually wherever a horse's ear points is where the horse is looking. If the ears are pointing in different directions, the horse is looking at two different things at the same time.

- Horses cannot breathe through their mouths, regurgitate food or vomit.

- Horses have a prehensile upper lip. Prehensile means "adapted for seizing, grasping, or taking hold of something." Their upper lips are very sensitive and capable of feeling the smallest of differences in objects.

- A horse's upper jaw is wider than its lower jaw. During normal chewing, sharp edges or points frequently form along the outside edge of the upper teeth and the inside edge of the lower teeth due to the uneven grinding surface created by the different width of the jaws.

- A horse's age can usually be accurately determined by its teeth until the horse is about 9 years old. After that, a horse is known as "smooth mouthed" or "aged," and it becomes far more difficult to tell its age by this method.

Problem Grazers

It is ideal if all of the plants in a pasture are grazed evenly to the same height. But horses are uncooperative grazers. They will eat what they like best until it is no longer available, and only then will graze on other plants in the pasture. The more options horses have in the pasture, the more selective they become.

Equines have a unique digestive system which allows them to utilize large amounts of forage. Unlike ruminants, such as cows, horses are basically continual grazers. They spend 13-18 hours per day grazing, while cows must spend about one-third of the day ruminating. Horses are biting top-grazers, whereas cows are tongue-lapping, tearing side-grazers. Horses eat the tops of plants until the plants in that spot are short. Then they graze new sprouts on that spot and avoid what appears to be good, taller pasture.

Consequently, when horses occupy one pasture for a long time, they graze down their favorite plants repeatedly. Grasses subjected to this repeated leaf removal are unable to photosynthesize (make their own food). They must then draw energy from their root reserves. Eventually these favorite plants are depleted to the point that they die. Bare spots, weed growth and soil erosion will soon follow.

The spot-grazing effect can be so intense and extensive that large spots, and finally whole pastures, are destroyed by grazing too short, too often and too much over an extended period of time.

Horses are large, heavy animals, and the negative effects of their spot grazing are compounded by trampling damage and compaction of the soil. Also, they tend to leave their manure in certain areas without distributing the nutrients and damage over the whole pasture. They will then avoid grazing these areas, wasting valuable forage.

When horses are allowed to overgraze, bare spots develop and the pasture quality suffers.

How Forage Plants Grow

This is probably one of the most important aspects of grazing management. It is also one of the least understood.

95 percent of plant food is taken from the air. Leaves are food factories. In the presence of sunshine, they combine carbon dioxide from the air with water, nitrates and minerals from the soil to make plant food. **Short tops mean short roots.**

5 percent of plant food is taken from the soil. Roots store food. They gather and store raw materials: water, nitrates and minerals, which are converted into plant food by the leaves. This food is essential for future growth. **Short roots mean less future grass production.**

Overgrazing destroys roots and leaves. Pasture management is really leaf area management. A good rule of thumb is to **TAKE HALF, LEAVE HALF** of the plant's leaf area during any grazing rotation. This allows the plant plenty of leaf area to continue making food for regrowth.

Removing 60 percent or more of the leaf area will stop a large percentage of root growth for several days. If repeated, overgrazing occurs and plants become stressed and lose vigor. Beginning grazing heights for cool-season forages are 6-8 inches. Never graze below a 3-inch height to allow adequate leaf area for regrowth.

E+ Fescue

Tall fescue infected with the toxic endophyte fungus (E+) has long been taboo for use as horse pasture or hay. Toxic E+ tall fescue affects all classes of horses, but the most dramatic effects are seen in pregnant mares. Pregnant mares grazing E+ tall fescue may develop thickened placentas resulting in foal death, and the mare may fail to lactate. Pregnant mares should not be allowed to graze E+ fescue or eat hay containing E+ fescue for 60-90 days prior to foaling.

Varieties of tall fescue are available which do not contain the toxic endophyte. These varieties should be selected for planting. It is prudent for horse owners to eradicate the E+ fescue to the greatest extent possible.

Pros and Cons of Grazing

Horses naturally meet their nutritional needs through grazing. It is possible to provide a balanced nutritional diet for horses that are not allowed to graze, but there are several advantages to providing good quality pastures for horses.

Good pastures provide one of the best and least-expensive means of feeding horses. The horse's digestive tract needs adequate fiber to function properly. Pasture forages provide fiber, as well as protein, minerals and vitamins.

Horses appear to be healthier when kept outside on pasture with adequate shelter because they get sunshine, fresh air and exercise. Most horses kept on pasture also have a better disposition than horses that are kept in stalls all of the time.

Grazing also may improve reproduction. Mares placed on spring pasture have been shown to ovulate up to seven days earlier than mares of similar age that are kept on dry lots and fed hay.

Without proper management, however, there can be drawbacks to grazing both for horses and the environment. For example, horses can be malnourished in deep, green forage. Extremely lush pastures containing more than 85 percent water can be too wet and too low in fiber for good nutrition and dry-matter intake. Providing too much water and too little nutritional value, plentiful, low-quality pasture can result in hay gut and horse digestive tract impaction (colic). Thus, supplemental feeding on pasture is sometimes needed.

If horses have not grazed pastures all winter, they should not be turned out at once on spring pasture. Immediate access to lush, spring forages can cause colic or laminitis (founder).

A crucial factor in managing horses on pasture is to avoid abrupt changes from a fed ration to pasture and from extremes of pasture quality. Changes especially are a problem when horses are moved from a lower-quality pasture, or no pasture, to a high-quality pasture.

To prevent problems when introducing horses to pastures, feed them a normal amount of hay before turning them out, and limit grazing time to one hour the first day. Then add 30 minutes to one hour of grazing time each day, or as recommended by your veterinarian.

Eating clovers, either by grazing or in hay, often results in excessive slobbering caused by a fungus growing on the clover when conditions are adverse. While not particularly attractive, this poses no health concern to the horse.

In addition, there are a number of plants that are poisonous to horses that can make horses ill, or even kill them, if they are consumed (see plant list on page 17).

Rotational Grazing

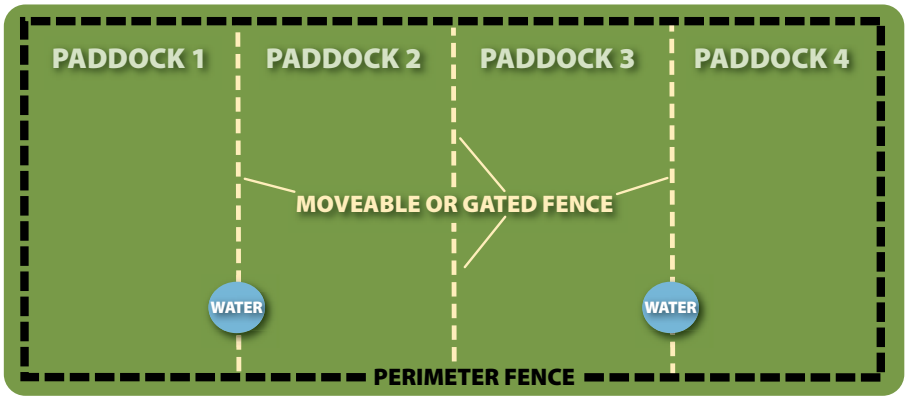
Rotational grazing involves dividing a larger pasture into several, separately fenced paddocks, and rotating horses among the smaller paddocks. The minimum number of paddocks for an effective system is four, but 12 or more paddocks are much better. Keep in mind that many of the paddock divisions can easily be done with temporary electric fencing.

Rotational grazing works because healthy forage plants are more productive if they are given an opportunity to rest and regrow between periods of grazing. As plants grow, they become more mature and less nutritious. Young, immature plants have more leaves than stems, and leaves have two to three times more nutrition than the stems, which are more fibrous and less digestible.

Since digestibility, palatability and nutrition decrease as plants mature, the ideal pasture has young, growing plants. Rotational grazing promotes growth by forcing horses to more uniformly graze a paddock instead of selectively grazing over and over the grasses they like the most.

The rule of thumb is to start horses grazing in a paddock when the forages are 6 to 10 inches tall, then move the horses to the next paddock after they have grazed the forage to an average height of 3 to 4 inches. The paddock just grazed by horses should be mowed or grazed by other livestock to obtain a uniform, 4-inch forage height within the paddock. Allowing the ungrazed plants to remain standing without clipping could stunt regrowth of the other forages by shading them. Immediately following mowing, the paddocks should be dragged to scatter the manure.

The length of time horses graze on each paddock depends on the amount of available forage and the length of time required for each



Rotational-grazing paddock layout example

Don't Overstock Your Pasture

A mature horse needs about 1.5 to 2 percent of its weight each day in dry forage, though many horses don't stop eating when they've eaten all they need. If the major nutrient source is pasture, a 1,000-pound horse needs about 2,700 pounds of forage during a six-month grazing season. Most of New Jersey's horse pastures are not irrigated, so with average production and management, it would take three to five acres of pasture to meet the nutrient needs of a mature horse.

By switching to rotational grazing, the amount of pasture needed per horse can be reduced, and the grazing season can be lengthened. On moderately productive soils, as little as two acres of well-managed pasture can support one mature horse in a rotational-grazing system for seven to eight months.

paddock to recover from grazing. The recovery period varies seasonally with the rate of growth. The grazing manager must continually monitor the growth of the forage, and adjust grazing and recovery periods accordingly.

If animals are removed from a paddock at the proper time - when the forage is 3 to 4 inches tall - recovery will require as little as 21 days in the spring. The same paddock might require 45-60 days to recover in dry, summer months when grasses grow more slowly.

For example, if you have two horses and four acres of pasture, you could divide the pasture into eight, one-half-acre paddocks. In the spring, when the grass is growing rapidly, grazing each paddock for three days will give each paddock 21 days to recover before they are grazed again. In a dry summer month, the recovery period could be 60 days, so the grazing period on each paddock would have to be extended to eight to nine days to accommodate this.

Many horse producers don't have the proper facilities to do the best rotational grazing. If you do not have enough land to provide the forage your horses need, and you do not wish to reduce the number of your horses, you will need to keep your horses in a dry lot or stalls, and feed them hay there until your pasture or paddock has regrown to at least 6 inches.

Example of small-acreage grazing system with lot and stalls

For example, if you only have enough land to grow forage for three horses, and you have four horses, they will have to be kept in a corral or stalls and fed hay during times when the grass grows slowly to make it possible to give the forages the proper amount of rest before they are regrazed.

Horses should never be allowed to graze pastures closer than 3 to 4 inches. When your horses have grazed the pasture to this height, remove them and allow the pasture to rest until the grass regrows to height of at least 6 inches.

Resting Guidelines

Grass and legumes need recovery time after being grazed. These are merely guidelines. Stocking rates and growing conditions greatly affect forage growth. Also, the more closely pastures are grazed, the longer the rest period needs to be for species which are sensitive to defoliation.

COOL-SEASON GRASSES

14-16 days during first rotation (April)
20-30 days during fast growth
(May - late June) and in the fall
30-40 days during slow growth
(summer or winter)

WARM-SEASON GRASSES

14-21 days during early fast growth
21-28 days during normal growing conditions
35-45 days during slower growth

LEGUMES

24-32 days throughout growing season
40-45 days for seed production

New Jersey Animal Waste Rules

The NJDA has developed rules to proactively address non-point source pollution that may originate from livestock operations. This includes operations that accept manure from other agricultural operations. The New Jersey Department of Agriculture (NJDA) was authorized by the Legislature to develop Criteria and Standards for Animal Waste Management (NJAC 2:91).

All agricultural animal operations must follow the General Requirements of the rules:

1. Agricultural animal operation shall not allow animals in confined areas to have uncontrolled access to waters of the state.
2. Manure storage areas shall be located at least 100 linear feet from waters of the state.
3. Land application of animal waste shall be performed in accordance with the principles of the NJDA Best Management Practices (BMP) Manual, which can be found at http://www.nj.gov/agriculture/divisions/anr/pdf/BMPManual.pdf.
4. Dead animals and related animal waste resulting from a reportable contagious disease or an act of bio-terrorism shall not be disposed of without first contacting the State Veterinarian.
5. Any person entering a farm to conduct official business related to these rules shall follow bio-security protocol.

Who needs an Agricultural Waste Management Plan (AWMP):

1-7 Animal Units (AU*) - All animal operations are encouraged, but not required to write a self-certified AWMP.

8-299 Animal Units with densities less than 1 AU per Acre - Operations are required to write a self-certified AWMP.

8-299 Animal Units with densities greater than 1 AU per Acre - Operations are required to write a self-certified AWMP that is reviewed by a conservation professional.

300 or more animal units - Operations are required to have a Comprehensive Nutrient Management Plan (CNMP) and must be certified by NJDA.

Operations accepting manure are required to write a self-certified AWMP if they receive more than 142 tons of manure per year.

* 1 AU= 1,000 pounds of live animal weight

New Jersey Adopts Equine Agricultural Management Practice

On June 26, 2008, the State Agriculture Development Committee (SADC) adopted rules that expand the list of equine-related activities eligible for right-to-farm protection and set forth the standards farmers will have to meet to qualify for that protection. The rules also detail what income may be used to satisfy the production requirements in the definition of "commercial farm" in the Right to Farm Act. One of the rules' new eligibility conditions is that an equine operation must be in compliance with a farm conservation plan prepared in accordance with the NRCS FOTG (Field Office Technical Guide). The guide is available online at http://www.nrcs.usda.gov/technical/efotg/.

For more information on the new rules and the Right to Farm Act, visit http://www.state.nj.us/agriculture/sadc/ruleprop/equinerulesbackground.pdf.

Characteristics of a Good Horse Pasture

- Palatable and nutritious forage.
- Weed-free, leafy and with few seed heads.
- Relatively smooth surface with thick forage - Horses' hooves are more damaging to sod than hooves of other animals. Do not allow horses to graze in muddy pastures because of the severe damage that will result. In addition to damaging the pasture, the uneven surfaces created can cause injury to horses.
- Easy to manage and large enough to provide quality forage and room for exercise.
- Well-drained; not in a marsh or in swampy areas. Avoid floodplains, drainage areas and tracts with long, steep slopes.
- Include an adequate supply of fresh water year-round, shade during summer, and shelter for times of adverse weather.
- Free of poisonous plants, and free of hazardous objects such as wire, stumps, junk, rocks and low-hanging limbs.
- Properly fenced.

General Horse Pasture Management

Key factors in management of horse pastures are proper liming and fertilizing, manure management and stream fencing.

Test the Soil

An inexpensive soil test, available from Rutgers Cooperative Extension (www.njaes.rutgers.edu), can help you determine the type and amount of fertilizer and lime needed for good pasture growth. This will help prevent nutrient runoff from over-fertilized pastures and reduce the cost of fertilizing by applying only what is needed. Test soil at least every three years to determine fertilizer and lime needs and prior to seeding.

Manage Manure in the Pasture

Manure clumps are a major cause of spotty pasture growth. Horses will not graze in areas where manure is present. Manure piles can be scattered by harrowing or dragging, which helps the pasture by distributing the nutrients. It also reduces some parasite problems by exposing the parasites to sunlight. Dragging can be done with a spike-tooth harrow, flexible-chain harrow, or a section of chain-link fence. Dragging should be done in sunny, dry weather to help kill the parasites in the manure. For safety, only drag pastures when they are not occupied by horses. Then leave them unoccupied for at least two weeks before returning horses to the pasture or paddock.

Manure Handling Considerations

A tractor or manure spreader is needed to promote proper application of spreading stored manure. Consider the following when spreading manure:

- Avoid applying too much manure; manure should be applied to the soil in a thin layer. Too much manure can seep and contaminate underground water supplies. A thin layer of manure speeds the drying process and also discourages fly breeding.
- Avoid spreading manure on wet soils to reduce soil compaction.
- Apply manure based on the nitrogen that meets the plants' fertilizer needs.
- Apply manure spreading rates based on soil testing results.
- Avoid spreading manure on frozen pasture.

Keep Horses Out of Streams

If horses must cross streams, construct a proper crossing to provide a safe, easy way to keep horse hooves dry. Wet hooves tend to be weaker, crack, and cause loose shoes more often. Wet hooves also tend to have more cases of thrush and fungal infections.

Use fencing to encourage horses to use the constructed crossings instead of crossing the stream at will. This allows vegetation to stabilize the stream banks. Keeping horses out of streams also protects the water quality and reduces sediment pollution.

Establish a Sacrifice Lot

When pastures are muddy, when grass growth is very slow due to extended dry weather, or any time you don't have a paddock ready to graze, move your horses to a sacrifice lot. A sacrifice lot is an exercise paddock or riding ring on which you don't expect to keep a grass cover. The area may have grass, wood chips, stone dust or just soil. The intent is to sacrifice a small area of your property in order to give your pastures time to recover.

Locate sacrifice lots on high ground, as far away from waterways as possible. Install buffers or other erosion-control measures to filter runoff. In areas where soils are poorly drained or deep, consider adding a packed layer of rock or limestone screenings to keep the area from becoming muddy and to help prevent injuries caused by slippery conditions. Placing a geotextile fabric under the rock layer will reduce future maintenance needs.

Commercial erosion- control pads or geo-textile fabric also can be placed in sacrifice lots and covered with soil or other materials.

Perforated mats were used in a sacrifice lot to minimize damage from rain and pawing.

Know When Not to Graze

A common mistake made by horse owners is grazing new pastures too soon. Wait until the forage is at least 6 inches tall before placing horses on newly seeded pastures; this could take up to 12 months.

If the soil is wet or when rain is expected, do not turn horses into pastures, especially newly planted ones. Horses' hooves do considerable damage to forages and to the soil, even in established pastures, when the soil is wet.

Provide Clean, Fresh Water

Clean, fresh water is essential for good animal health. Horses can consume between 8-12 gallons of water per day when the average temperature is 50 degrees Fahrenheit. That amount increases to 20-25 gallons per day when the temperature climbs to 90 degrees Fahrenheit or when in an exercise program.

Horses should not have to travel more than 800 feet for water. As you divide your acreage into paddocks, establish separate water sources for each paddock or a single water source that is accessible from all paddocks. Water can also be piped to a trough in each pasture.

Fencing for Horses

Horse owners must have adequate fencing to safely contain and manage their horses. Fencing often is considered just a means of containing horses, which is especially important in urban areas. But fencing is much more than that. Daily labor needs and routines are influenced by the fencing plan.

The key to good horse fencing is proper construction and adequate maintenance. Safety of the handlers, visitors and the horses must receive first priority in designing horse fencing. Cost is a major consideration, but it should not dictate unsafe or inefficient fencing. While aesthetics should be considered, it should not overrule safe, functional fencing. For example, do not place boards on the outside of posts just because it looks nicer; it's safer for horses and more functional to place the boards on the inside of the posts where leaning against the fence will not loosen boards.

Barbed wire should not be used for horses, and electric fencing alone is not recommended for perimeter fences. However, because horses are sensitive to electric shock, they can be easily trained to respect electric fences. A major concern is visibility. Electric fencing made of wide tape addresses this concern, but those tapes tend to be relatively poor conductors and do not last long. Another option is plastic-coated, 12.5-gauge, high-tensile wire developed specifically for the horse industry. It is more visible, attractive and safer than uncoated wire.

If wire is used, it should be smooth. A fence made of 12.5-gauge, high-tensile wire with a tape for visibility works well. If electric fencing is used for perimeter fencing, four to five strands should be used. The top wire should be 40-50 inches above the ground.

Plastic-coated horsewire, an example of permanent fencing wire, is more visible and less likely to cut a horse that may run into it.

Choose fencing that safely meets your economic and aesthetic needs. To minimize damage and maintenance to your fences, consider using an electric strand on top of PVC or wooden fencing if your horse is a cribber or if it chews.

Keep in mind a few basic fencing needs of horses when you make your choice. The general rule is that the top of the fence should be at eye level to the horse. This discourages horses from fighting over the fence.

Lightweight, temporary electric fencing consisting of polytape, polyrope or polywire

strung on lightweight plastic or fiberglass posts works well for dividing a pasture into paddocks in a rotational-grazing system. Use of small, uncoated, 14-gauge or 18-gauge wire commonly used with cattle is not recommended because it is not safe for horses, primarily because they cannot see it. Because of their poor eyesight, horses often make contact with the electric fence, which shocks them and makes them run. This can be disastrous if the wire gets wrapped around a horse's leg. The small wire can also cut horses when they run into it.

Examples of temporary fencing wire.

The Best Forages

There is no forage that is best for all situations. Several forages, singly or in combinations, make good horse pastures. But not all forages are suited for horses. Forages are classified as grasses or legumes, and further defined as cool-season grasses or warm-season grasses. Some are perennials and some are annuals.

Horse pastures should have one or two grass species that grow well on a specific soil type, plus a legume that is well adapted to the soil. Adding one or two other grass or legume species to this mixture can extend the growing season because each species has a time of the year when it produces best. By using several species, owners could provide horses with adequate pasture for most of the year.

Keep in mind that horses are picky eaters, and will overgraze the grasses they like best while ignoring the other forages. Some horses also prefer grasses over legumes. However, legume forages are more nutritious than grass forages, and they enhance the nutrition of grasses because of their nitrogen-fixing capabilities. A well-managed rotational-grazing system encourages horses to utilize all of the forage species in a paddock.

When establishing a new pasture, plant cool-season grasses in the fall and legumes in the spring. If planted together in the fall, the rapidly growing legumes crowd out the grasses. Warm-season grasses can be planted during the winter dormant period or during the spring. It is generally best to wait until the next growing season to add legumes to a warm-season-grass pasture.

Pasture plants that often are used for horse pastures in New Jersey are listed on the next page with advantages and disadvantages of each.

Soil erosion can be a serious problem on pastures or paddocks.

Paddocks as Sacrifice Areas

Use turnout paddocks as "sacrifice areas" to preserve pastures. This strategy reduces churning and compaction of wet soils, and overgrazing when pastures require rest. If possible, locate paddocks back from waterways; and avoid swales where overland flows can wash away bare soil or manure. Maintain a vegetated border around paddocks to help filter pollutants. Be sure paddocks provide horses with adequate exercise room.

Soil Erosion

Soil erosion can be a serious problem on pastures or paddocks. Any sloping area that is not adequately protected with healthy vegetation is likely to produce sediment-laden runoff that has offsite impacts, especially in streams and lakes. Erosion can occur as sheet or rill soil movement, which is subtle, or in concentrated flow as gullies, which can become deep enough to risk animal injury. Fencelines that run up and down hill can be very susceptible to gully erosion due to the typical concentration of the animals along the fence, eliminating all vegetation.

Any gullied areas in pastures or paddocks must be filled and graded to eliminate the hazard. Pastures should be reseeded immediately after grading. Horses must be kept off of repaired and reseeded areas to allow the vegetation to establish.

In a pasture, maintain adequate vegetation for animal nutrition and soil protection. This is done through rotational grazing and forage overseeding. At times even seeding of annual grasses can be prudent if quick cover is needed before the desirable forage species can re-establish.

In a paddock or sacrifice area, vegetation is not practical, so erosion must be controlled with good stormwater management:

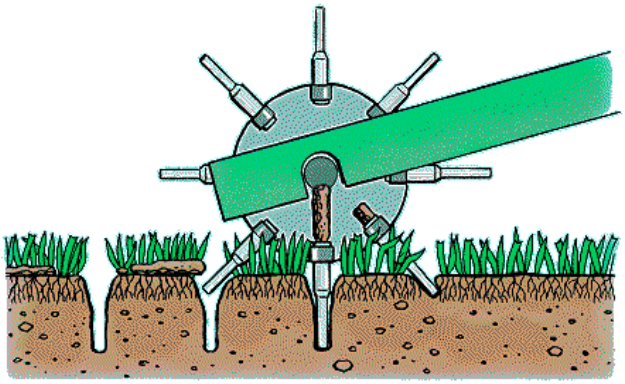
- Keep "clean water clean." Use grassed waterways, diversions, or subsurface drains to divert clean runoff around barns, manure storage areas, and paddocks.
- Install and maintain a system of properly sized roof gutters, downspouts, and drains to prevent roof water from becoming polluted by mixing with barnyard manure and sediment.
- Separate barnyards, paddocks, and manure storage areas from any waterway with filter strips of vegetation to trap sediments and absorb nutrients in runoff.

Soil Compaction

Compaction of the soil surface can greatly reduce rainfall storage and increase runoff and erosion. A porous soil improves plant vigor by allowing the infiltration of water, air, and nutrients. Hoof impact and machinery operation on wetter fields compact soils and intensify loss of this porosity.

Soils that are higher in clay content are more susceptible to hoof compaction than sandier soils.

One of the methods commonly used to reduce soil compaction is to aerate. Aerators are available for purchase or rent and easily hook up to a tractor with a 3-point hitch. Core aerating, which pulls 3-4 inch cores of soil, is generally more beneficial than tine aeration, which cuts narrow 2-3 inch slots. The best time to aerate is in the spring or early summer when grasses are growing most actively. Aerating can be done as part of a fertilizing and reseeding process. Aerate when soils are not wet.

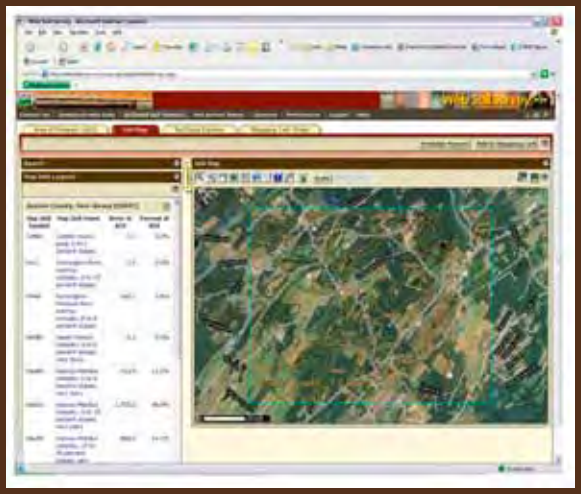


Core aerating pulls 3 to 4 inch cores of soil.
Image Source: Cornell University

A more involved way to improve infiltration on compacted animal areas is deep chiseling or subsoiling. This consists of the running of a shank 12-18 inches deep that penetrates and shatters the compacted layer. This can only be done in the summer, at the driest soil conditions. Followed with overseeding and dragging, the process can renovate the pasture. On steeper slopes, all tillage operations should be on the contour.

Web Soil Survey

Soil data and information produced by the National Cooperative Soil Survey are available on the Web Soil Survey, operated by the USDA, Natural Resources Conservation Service (NRCS). Soil maps and data for 20 of New Jersey's 21 counties can be accessed there. The site is updated and maintained online as the single authoritative source of soil survey information. http://websoilsurvey.nrcs.usda.gov/



Visit the NJ NRCS website soils page at http://www.nj.nrcs.usda.gov/technical/soils/

Manure Management

Storing manure allows farm managers to spread manure when it is beneficial for the land to receive manure based on plant fertilizer needs and weather conditions. Storing manure reduces the need to spread manure on a daily basis. Horse manure is low in moisture and is handled as a solid manure. Therefore, horse manure is stored predominately in a dry stack or compositing facility. Manure storage systems are generally designed to store material no longer than 6 months, but most are designed to store it for less than 3 months.

Manure storage facilities should be in well-drained areas that are accessible to trucks, tractors and other removal equipment. Manure should not be stored in areas where runoff may enter streams or where flood waters might wash the manure away. Manure piles should be at least 150 feet from streams, ponds and wells. Establish and maintain grass buffer strips between water sources and manure piles. Cover manure piles to keep out rainwater.

Composting

Consider building a manure structure or composting bin. These structures protect stockpiled manure from runoff until the manure breaks down and can be used as fertilizer. There are many benefits to setting up a small composting facility. Composted manure makes an excellent, slow-release pasture and garden fertilizer, and is an excellent soil conditioner.

Composting produces a relatively dry product that is easily handled and reduces the volume of manure by 40-65 percent. Composting at proper temperatures kills fly eggs and larvae, pathogens, and weed seeds.

Virtually no viral diseases are transmitted between horses and humans through fecal material, but some bacteria and protozoan, (such as E. coli and Giardia) can be transmitted in this manner. Therefore, handle manure carefully to prevent disease transmission.

A variety of bedding sources can be used effectively in correspondence with a farm's management plan. The type of bedding used will influence the efficiency of the storage system and affect the fertilizer value of manure. Straw tends to decompose faster than wood shavings and therefore, provides a quicker composted material. Manure compost with straw bedding will also utilize the nutrients quicker from the manure if spread on pastures and hay fields, where as compost from wood material will provide a slow release of nutrients. The farm's nutrient management plan should take into account how the bedding will influence the management of nutrients on the farm.

Composting Benefits

- Composted material contains organic matter which can be added to the soil to improve soil health and provide plant nutrients for growing crops and pastures.
- Composted material can be used to supplement or replace commercial fertilizers.
- If the manure is properly composted, the material can be sold as an additional product.
- The composted material can be used to reduce the carbon in the air and recycle the carbon back into the soil.

Dry stack manure storage structure

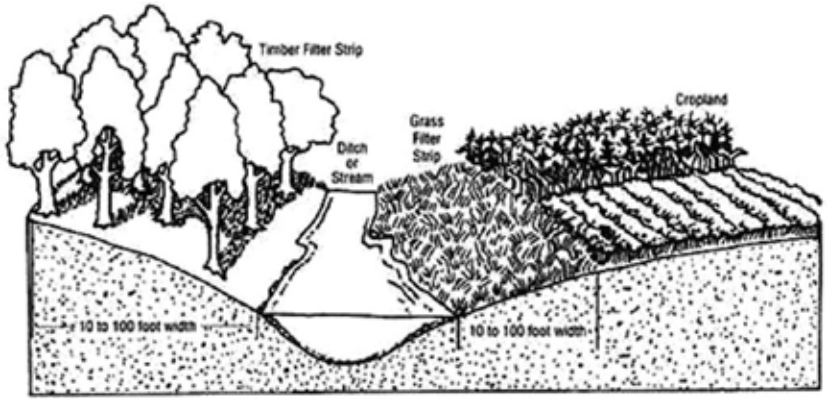
Vegetative Filter Strip

Vegetative filter strips are land areas of either planted or indigenous vegetation, situated between a potential pollutant-source area and a surface-water body that receives runoff (see figure below). The term 'buffer strip' is sometimes used interchangeably with filter strip, but filter strip is the preferred usage. Runoff may carry sediment and organic matter, and plant nutrients and pesticides that are either bound to the sediment or dissolved in the water. A properly designed and operating filter strip provides water-quality protection by reducing the amount of sediment, organic matter, and some nutrients and pesticides, in the runoff at the edge of the field, and before the runoff enters the surface-water body. Filter strips also provide localized erosion protection since the vegetation covers an area of soil that otherwise might have a high erosion potential.

Often constructed along stream, lake, pond or sinkhole boundaries, filter strips installed on pasture or cropland not only help remove pollutants from runoff, but also serve as habitat for wildlife, and provide an area for field turn rows and haymaking. Livestock should be fenced out of filter strips to maximize the pollutant filtering potential. Additionally, filter strips may provide increased safety by moving machinery operations away from steep stream and ditch banks.

Filter strips are an edge-of-the-field best management practice. They often are used in conjunction with other sound agricultural and land management practices, such as pasture management, soil testing, and proper nutrient and pest management. Because of their potential environmental benefits, filter strips are recommended by a number of state and federal agencies as both an urban and agricultural best management practice.

-Source: Ohio State University Extension



Riparian Buffers

Riparian buffers are another type of conservation buffer similar to vegetative filter strips. A riparian buffer is planted with permanent vegetation to intercept pollutants and protect the stream from adjacent land use. A riparian buffer is comprised of two to three zones. The first zone is a filter strip of native, perennial grasses immediately adjacent to the water body.

The second zone contains a combination of native trees and shrubs, in addition to ground cover vegetation to filter sediments and pollutants from surface water runoff. If necessary, the final zone consists of mature trees to provide shade and protect the buffer from potential disruption from adjacent land uses.

In addition to filtering sediment, nutrients, pesticides, and other materials from surface runoff, riparian buffers also provide habitat and wildlife corridors increasing biodiversity. They can also contribute to reducing soil erosion and stream bank stabilization. Varying the vegetation and installing a riparian buffer around farm ponds, can attract a variety of species and increase biodiversity. The increased vegetation can also deter nuisance wildlife, such as Canada Geese, as it limits their sight.

Pasture Plants

Legumes

SPECIES	ADVANTAGES	DISADVANTAGES
Alfalfa	highly nutritious high yielding high palatability	fertility requirements management inputs short lifespan
Bird's-foot Trefoil	productive with low fertility persists well	difficult to establish low seeding vigor lower palatability
Ladino Clover and White Clover	does well with close grazing palatable winter hardy	not drought tolerant lower yielding mold may cause slobbering
Red Clover	highly nutritious adapted to wider range of soils than alfalfa	lasts only 2-3 years doesn't tolerate close grazing mold may cause slobbering

Cool-Season Grasses

SPECIES	ADVANTAGES	DISADVANTAGES
Tall Fescue (endophyte free only)	long lived tolerates traffic and close grazing drought tolerant good yields endophyte-friendly varieties show promise	persistence problems with endophyte free palatability problems as plants mature
Timothy	easy to establish produces well in the spring grows under wide range of soil and climate conditions	not as productive as other cool-season grasses more open sodded, increasing potential for weeds not grazing tolerant potential for cereal rust mite
Orchard Grass	highly palatable good summer growth	not tolerant to close grazing bunch grass offers potential for weeds
Kentucky Bluegrass	highly palatable; horses prefer it over other grasses withstands close grazing well forms dense sod widely adapted	low yields poor drought tolerance
Perennial Ryegrass	very high palatability easy to establish	less persistence poor drought tolerance requires higher fertility
Smooth Bromegrass	very high palatability good drought tolerance	requires higher fertility low fall yields doesn't persist with close grazing

Warm-Season Grasses (Native)

SPECIES	ADVANTAGES (ALL SPECIES)	DISADVANTAGES (ALL SPECIES)
Big Bluestem	provide good summer production	difficult, expensive, & slow to establish
Little Bluestem	require less fertility	will not tolerate close grazing
Indian Grass	not invasive	can become coarse, stemmy, low quality if too mature

Other Forages That Can Be Used

COOL-SEASON ANNUALS

- Wheat
- Oats
- Rye
- Triticale
- Annual Ryegrass

WARM-SEASON ANNUALS

- Millet

Forage Species to Avoid

- Alsike Clover
- Arrowleaf Clover
- Sweet Clover
- Vetch
- Endophyte-Infected Tall Fescue (for broodmares)
- Sorghum
- Sudan Grass
- Sorghum/Sudan Hybrids
- Johnson Grass
- Goose Grass
- Switchgrass[1]

[1] Monocultures of switchgrass may cause photosensitivity and liver damage under certain conditions. It is recommended that switchgrass be avoided until further research is conducted.

Poisonous Plant Considerations

Most plants that are toxic to horses are broad-leaved. Horses normally do not like broad-leaved weeds but will graze them if more desirable forage is limited. Having a few toxic plants available does not mean you have an acute problem. The list below contains some common potentially toxic plants. It is intended only to increase awareness of potential problems and stress the need for weed control.

- Bitterweed
- Black Locust
- Cocklebur
- Horsetail
- Milkweed
- Nightshade Family
- Pigweed
- Pokeweed
- Snakeroot
- St. John's Wort
- Water/Poison Hemlock
- Wild parsley or carrot
- Yarrow
- Landscaping and garden plants: castor bean, gladiolus, ivy, pea vines, boxwood, tomato, Japanese Yew*[2]

2 Japanese Yew is very toxic to horses.

For more on conservation practices that can benefit equine operations, consult the New Jersey Field Office Guide (eFOTG) .

PLANT NOTES

1. SEE SHEET L.2 FOR PLANT LIST AND DETAILS
2. VERIFY THE LOCATION OF ALL UTILITY LINES PRIOR TO ANY PLANTING PIT EXCAVATION. CONTACT 'CALL BEFORE YOU DIG' 72-HOURS PRIOR TO THE COMMENCEMENT OF ANY DIGGING OPERATIONS. COORDINATE WITH PROPERTY MANAGER REGARDING OTHER UNDERGROUND SYSTEMS.
3. NOTIFY THE LANDSCAPE ARCHITECT AT LEAST FIVE (5) DAYS IN ADVANCE OF PLANT MATERIAL DELIVERY TO THE SITE.
4. LAYOUT ALL PLANT MATERIAL WITH THE LANDSCAPE ARCHITECT PRIOR TO PLANT PIT EXCAVATION. SET UP OF ALL MATERIAL IN BEDS REQUIRED FOR OWNERS AND LANDSCAPE ARCHITECTS APPROVAL PRIOR TO PLANTING. SEE PLAN FOR PLANT LAYOUT. IF ANY DISCREPANCY OCCURS BETWEEN THE QUANTITIES CALLED FOR ON THE PLAN, NOTIFY THE LANDSCAPE ARCHITECT PRIOR TO BID.
5. ALL PLANT MATERIAL IS TO CONFORM TO THE REQUIREMENTS OF THE STANDARDS OF THE AMERICAN ASSOCIATION OF NURSERYMEN FOR EXTRA HEAVY GRADE UNLESS OTHERWISE SPECIFIED, TRUE TO NAME AND SIZE. INVESTIGATE SOURCES OF SUPPLY AND BE CERTAIN IT WILL BE POSSIBLE TO PROVIDE ALL PLANT MATERIALS SPECIFIED IN THE QUALITY AND QUANTITY REQUIRED PRIOR TO BIDDING.
6. ANY PLANT REQUIRED UNDER THIS CONTRACT THAT IS DEAD, DYING, NOT TRUE TO NAME OR SIZE,AS SPECIFIED, OR NOT IN SATISFACTORY GROWTH, OR HAVING BRANCHED OR DEFORMED STRUCTURE DUE TO LOSS OF LIMBS OR BRANCHED AS DETERMINED BY THE LANDSCAPE ARCHITECT, THAT PLANT MUST BE REMOVED FROM THE PROJECT SITE AND REPLACED WITH AN APPROVED PLANT OF EQUAL SIZE AND SPECIES. PLANT VARIETY AND SIZE SUBSTITUTIONS WILL NOT BE PERMITTED UNLESS PROVED THAT THE SPECIFIED PLANT MATERIAL IS UNATTAINABLE OR CANNOT MEET SPECIFICATION REQUIREMENTS, THEN THE USE OF THE NEAREST EQUIVALENT SIZE OR VARIETY WILL BE CONSIDERED. PLANT MATERIAL LARGER THAN SPECIFIED MAY BE USED AT NO INCREASE IN COST. PROPOSED SUBSTITUTIONS MUST RECEIVE THE LANDSCAPE ARCHITECT'S AUTHORIZATION PRIOR TO BID AND PRIOR TO PURCHASE.
7. STAKE TREES ONLY AS NECESSARY TO ENSURE STABILITY.
8. ALL PLANT MATERIALS ARE TO BE GUARANTEED FOR A PERIOD OF ONE YEAR FROM THE DATE OF FINAL ACCEPTANCE AS DETERMINED BY THE LANDSCAPE ARCHITECT OR PROJECT MANAGER.
9. RESTORE ALL DISTURBED OR DAMAGED AREAS RESULTING FROM PLANTING OPERATIONS TO ORIGINAL CONDITIONS.
10. SEE PLAN FOR TREE LOCATIONS, SET UP TREES FOR APPROVAL FROM OWNER AND LANDSCAPE ARCHITECT PRIOR TO INSTALLATION. RESEED ANY DISTURBED TURF AREAS WITH APPROVED MIX, MULCH WITH CHOPPED STRAW. INSTALL SEEDING IN ACCORDANCE WITH MANUFACTURERS RECOMMENDATION.

Site Development Plans

by: **DiMarzo & Berezcky, Inc.**

GENERAL NOTES:

1. THE INTENT OF THESE DRAWINGS IS TO DEMONSTRATE THE GENERAL SITE DEVELOPMENT FOR THE LOT. REFER TO OTHER DESIGN DOCUMENTS FOR ADDITIONAL DETAILS.
2. ALL SURVEY DATA, BOUNDARY LINES, TOPOGRAPHY, WETLAND LOCATIONS AND BUILDING LOCATIONS ARE PER A SURVEY PREPARED BY T.C. MERRITTS LAND SURVEYORS. THE SURVEY IS TITLED "TOPOGRAPHY OF PROPERTY PREPARED FOR KENT FARRINGTON LLC SITUATE IN THE TOWN OF NORTH CASTLE, WESTCHESTER COUNTY, NEW YORK". IT IS DATED 6/21/2021. ELEVATIONS ARE BASED ON NORTH AMERICAN VERTICAL DATUM 1988 (NAVD '88).
3. REFERENCE IS MADE TO TAX ID: 95.03-2-56, ZONE: R-4A.
4. THE OWNER OF RECORD IS MARENGO FARMS LLC.
5. INFORMATION ON EXISTING UTILITIES HAS BEEN COMPILED FROM FIELD SURVEY AND IS NOT GUARANTEED CORRECT OR COMPLETE. THE CONTRACTOR IS SOLELY RESPONSIBLE FOR DETERMINING ACTUAL LOCATIONS AND ELEVATIONS OF ALL UTILITIES INCLUDING SERVICES. THE CONTRACTOR IS REQUIRED TO CONTACT "DIAL 811" AND CONTACT SHOULD BE MADE BEFORE ANY EXCAVATION OR DIGGING.
6. LOCAL AND NYSDEC WETLANDS WERE IDENTIFIED AND LOCATED ON THE PARCEL.
7. ALL CONSTRUCTION SHALL COMPLY WITH THE TOWN OF NORTH CASTLE REQUIREMENTS, THE STATE OF NEW YORK BASIC BUILDING CODE, THE NEW YORK STATE STANDARDS AND SPECIFICATIONS FOR EROSION AND SEDIMENT CONTROL AND O.S.H.A.
8. THE PROPERTY IS SERVED BY PRIVATE WELL WATER AND A PRIVATE ON-SITE WASTEWATER TREATMENT SYSTEM (O.W.T.S.).
9. PROPERTY LIES WITHIN THE MIANUS RIVER WATERSHED.
10. IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO PROVIDE AND EXCAVATION SAFEGUARDS, NECESSARY BARRICADES, FLAG MEN, ETC. FOR TRAFFIC CONTROL AND SITE SAFETY. ALL WORK SHALL BE DONE IN ACCORDANCE WITH O.S.H.A. REQUIREMENTS. THE CONTRACTOR SHALL BE RESPONSIBLE FOR COMPLIANCE WITH O.S.H.A. REQUIREMENTS.
11. WHEN PREPARING THE EXISTING SITE FOR PROPOSED DEVELOPMENT, ALL MATERIALS REMOVED SHALL BE DISPOSED OF IN CONFORMANCE WITH ALL GOVERNING AGENCIES.
12. SPECIAL ATTENTION OF THE CONTRACTOR IS CALLED TO THE REQUIRED TYPE AND COMPACTION OF PIPE BEDDING AND BACKFILL SPECIFIED ON THESE DRAWINGS. THESE REQUIREMENTS WILL BE STRICTLY ENFORCED.
13. ALL DEVELOPMENT ACTIVITIES TO BE UNDERTAKEN WITHIN THE STREET RIGHT-OF-WAY AND OTHER PUBLIC LANDS SHALL COMPLY FULLY WITH TOWN STANDARDS UNLESS APPROVED DEVIATION IS SPECIFICALLY SET FORTH AS PART OF THIS APPLICATION.
14. CONTRACTOR SHALL SUPPLY COMPLETE SHOP DRAWINGS INCLUDING MANUFACTURER'S PRODUCT DATA SHEETS TO THE SITE ENGINEER, FOR ALL CONSTRUCTION MATERIAL USED IN CONJUNCTION WITH THESE DRAWINGS. CONTRACTOR SHALL ALLOW A 5 DAY REVIEW PERIOD, PRIOR TO FABRICATION AND INSTALLATION.
15. PRIOR TO ISSUANCE OF A CERTIFICATE OF OCCUPANCY, THE CITY MAY REQUIRE A CERTIFICATION LETTER STATING THAT THE DEVELOPMENT WAS CONSTRUCTED IN ACCORDANCE TO THE APPROVED PLANS, AND AN "AS-BUILT" DRAWING SHALL BE SUBMITTED
16. THE CONTRACTOR IS RESPONSIBLE FOR COORDINATING WITH A LICENSED SURVEYOR TO PREPARE AN "AS-BUILT" PLAN. THE CONTRACTOR IS RESPONSIBLE TO COORDINATE WITH A SITE ENGINEER 48 HOURS PRIOR TO ANY INSPECTIONS.
17. ANY MATERIAL, MAN-MADE OR NATURAL, WHICH IS IN ANY WAY DISTURBED AND/OR UTILIZED DURING WORK SHALL NOT BE DEPOSITED IN ANY WETLAND OR WATERCOURSE, EITHER ON OR OFF-SITE, UNLESS SPECIFICALLY AUTHORIZED BY A DOCUMENTED PERMIT.
18. THE WORK SHALL BE DONE IN CONFORMANCE WITH THE CONTRACT DOCUMENTS/PLANS UNLESS CHANGES HAVE BEEN APPROVED IN WRITING BY THE DESIGN ENGINEER PRIOR TO THE WORK BEING DONE.
19. AN ON-SITE PRE-CONSTRUCTION MEETING SHALL BE ATTENDED BY THE TOWN ENGINEER, TOWN BUILDING INSPECTOR, THE INSPECTING ENGINEER OF RECORD, CONTRACTOR, AND OWNER TO REVIEW THE SCOPE OF CONSTRUCTION. THE CONTRACTOR SHALL BE RESPONSIBLE TO COORDINATE THE PRE-CONSTRUCTION MEETING.

9.	Amount of lot area covered by **driveway, parking areas and walkways:** 8,415 existing + 27,190 proposed =	35,605 SF
10.	Amount of lot area covered by **terraces:** 0 existing + 1,330 proposed =	1,330 SF
11.	Amount of lot area covered by **tennis court, pool and mechanical equip:** 0 existing + 1,030 proposed =	1,030 SF
12.	Amount of lot area covered by **all other structures:** 0 existing + 205 proposed =	205 SF
13.	Proposed **gross land coverage:** Total of Lines 5 – 12 =	69,100 SF

If Line 13 is less than or equal to Line 4, your proposal **complies** with the Town's maximum gross land coverage regulations and the project may proceed to the Residential Project Review Committee for review. If Line 13 is greater than Line 4 your proposal does not comply with the Town's regulations.
